2007 CMHS Uniform Reporting System Output Table

General Notes: MN, FY2007

Table Number	General Notes
9	We collected data on Social Connectedness and Functioning as part of our client survey, which is based on MHSIP
12	The number of persons with co-occurring MH/SA disorders is estimated through self-report by adults who have SMI or families with children receiving public mental health services. Only adults who have SMI receive the survey, so Minnesota has not estimated the percentage of the total adult population served who have MH and SA. All families whose children receive public mental health services are eligible to receive the anonymous survey, so Minnesota cannot estimate the percentage of children with SED who have MH and SA.
15	Residential Care and Institutional Setting numbers are from the Community Mental Health Reporting System, and are actual numbers reported. All other numbers (private residence, foster care, jail, homeless, other) are estimates based on a random sample survey. The confidence interval of + or - 3% (at 95%) means the totals for each category will not exactly match each other. (for example, the overall total for private residence by gender will not match the overall total for private residence by age.) This is also the reason for large variability from year to year among small groups, such as homeless, which is estimated at less than 1% of people served.
16	Supported Housing and Supported Employment numbers are based on a stratified random sample survey of the SMI population. The 95% confidence interval of +/-3% means subcategory totals do not match. ACT numbers are reported to SMHA. Number of children receiving Therapeutic Foster Care has not been reported in 2007. It is the opinion of the SMHA that this program is not within fidelity.
