9SC, 11	<p>Proportion Positive is Calculated This Way: In analyzing survey data, each set of answers is converted to numbers 1-5, ranging from 1 = "Strongly Disagree" to 5 = "Strongly Agree". In the case of a single item, the proportion positive is the percentage of people answering 4 or 5 to an item where 4 is "Agree", 5 is "Strongly Agree" and the item is worded positively. For a scale* with more than one item, things get a little more difficult. Here, for one person, the score on the scale is the proportion in the scale that are answered positively. For example: a participant's choices on all items in the Appropriateness scale were 3-3-4-4-5. Three of the five items were answered positively, giving a proportion positive score of 3 out of 5, or 0.60 for Appropriateness — meaning that person answered 60% of the scale items positively. Then, the average over all participants' scores would be the average proportion positive for any defined group.</p>
