Note:

Are Client Counts Unduplicated? Duplicated between Hospitals and Community **Number of States with Unduplicated Counts** 44

This table uses data from URS/DIG Table 2a, Table 2b and from the US Census Bureau. All denominators use US Census data from 2008

US totals are calculated uniquely for each data element based on only those states who reported clients served.

Regional groupings are based on SAMHSA's Block Grant Regions.

State Notes:

Table 2a

Age None
Gender None
Race Children's Mental Health captures the race(s) of each child, and also counts the child in more than one race category. This results in duplication.
Overall None

Table 2b

Age None
Gender None
Race Children's Mental Health captures the race(s) of each child and additionally counts the child in the more than one race category. This results in duplication.
Overall None

Note:

Admission Rate= number of admissions divided by total served during the year

US Admissions During Year uses data from states reporting data only. States are only included in "US Total Served" if they also reported data on admissions.

US Total Served During Year is calculated using data in URS/DIG Table 3.

This table uses data from URS/DIG Table3 and 6.

Table 3 State Notes:

Age Age and gender NA for Other Psychiatric Inpatient: Data are from SMHA bills for community hospitals waiting for state hospital beds.
Overall Data for CMH/AMH Programs may reflect some duplication for multiple state hospital admissions. Data duplication may also reflect crisis services to those not formally opened for other services.
Gender Age and gender NA for Other Psychiatric Inpatient: Data are from SMHA bills for community hospitals waiting for state hospital beds.

General Notes FY 2009

Idaho

URS Table Number	General Notes
2A, 2B, 14A, 14B	Children's mental health captures the race(s) of each child, and also counts the child in the more than one race category. This results in duplication. Transitioning the CMH data collection from the existing FOCUS to the WITS system with the Client Level Data Reporting Pilot Project data element definitions should resolve this issue for future reporting.
2A, 2B, 14A, 14B, 15	Adult mental health captures the race(s) of each consumer and additionally counts the consumer in more than one race category resulting in duplication.
04	Discrepancies exist between tables 2A and 4 are because the IMHP System has not been entirely reliable. It is hoped that the October 1, 2009 transition to the WITS system for AMH data collection and reporting will significantly improve the reliability of submitted NOMs and URS data.
5A	Medicaid funding is available for Medicaid-eligible clients. Non-Medicaid funding reflects funds from the Mental Health Block Grant and general funds allocated from the legislature. The "total served" reflects a duplicated count amounting to 243. The duplication results from counting individuals served through Medicaid, non-Medicaid, and the category of both. Idaho is unable to break this out by Medicaid, non-Medicaid, and both without counting an individual served through Medicaid, non-Medicaid, and both in each category.
11a	Idaho has no way to break out the aggregate of anonymous responses to the MSHIP and YSS-F into race and ethnicity.
12	Data not available for co-occurring disorders.
17	The EBP count for co-occurring is defined as a regionally-provided manual count of mental health court referred ACT clients with MH/SA diagnoses; this data is from all seven regions across the entire state. Data for the EBPs of Illness Self Management and Medication Management is taken from the FY2009 pilot of client-level data for the three pilot regions who participated in the Client Level Data Reporting Pilot Project. Four of seven regions did not participate and their numbers are not reflected in the counts for these two EBPs. The N=2767 for the three regions with Client Level Data Reporting Pilot Project data for Illness Self Management and Medication Management.
17	Co-occurring defined as MH court referred ACT with MH/SA diagnoses. Data for Illness Self Mgmt & Medication Management taken from FY 2009 Client Level Data Reporting Pilot Project data for 3 of 7 regions (N=2767)
All Tables	In Idaho, service delivery is provided through regional Behavioral Health sites for those who meet eligibility criteria for Serious and Persistent Mental Illness (adults). While some may have Medicaid, most have no form of insurance. Medicaid eligible individuals are primarily served through an array of private providers. For children who meet the State eligibility criteria for Serious Emotional Disorder diagnoses, the majority of services are provided through Medicaid funded private service provider. Some Medicaid eligible children are served through the state Children's Mental Health program.
All Tables	Medicaid numbers related to individuals served by private providers are not captured or reported in the NOMS/URS. The State of Idaho reports data provided through the Behavioral Health system. Because this does not include Medicaid private provider data, the total numbers reflected in penetration and other NOMS/URS categories will be significantly lower and do not reflect the totality of individuals with SMI or SED served in the State of Idaho.
All Tables	In addition to the Medicaid issue, there is another factor that may influence numbers reported for individuals aged 18-20 years. These individuals are in a transition phase from a more generalized eligibility criteria system used by the Children's Mental Health System to a more restrictive eligibility criteria system used by the Adult Mental Health system. Diagnostic categories are different and eligibility does not always translate easily from the Children's to the Adult system. Additionally, the Medicaid and Juvenile Justice system define children as under 21 years of age, and this is different from the Behavioral Health system that defines children as under the age of 18.
