General Notes FY 2009

New York

URS Table Number	General Notes
2A, 2B, 3, 4, 4A, 14A, 14B, 15	Annual estimates of total persons served are based on the Patient Characteristics Survey. Estimates from 2008 and 2009 have increased from those reported in previous years. This is due to a change in procedures and improvements in data quality. After intensive analysis of service patterns in Medicaid claims and encounters, project analysts revised the methodology used to annualize the one week survey data. Note also that the confidence interval for the annual estimate has widened for 2007 through the use of more accurate probabilistic techniques (Laska, Meisner, Siegel, Biometrics, June 1988) based on empirical mental health data.
3	1. State Hospital (SFY 4/08-3/09). Other Psychiatric Inpatient includes all persons with primary mental illness in general hospital units and Medicaid recipients served only in licensed private psychiatric hospitals (CY 2008). RTC (CY 2008). 2. Clients can be duplicated between Rows: e.g., The same client may be served in both state psychiatric hospitals and community mental health centers during the same year and thus would be reported in counts for both rows.
17	1. The Family Psycho education estimate includes 100 persons receiving services under the Macfarlane Multiple Family Group model and 2,000 consumers receiving Consumer Centered Family Consultation, a brief 1-3 session intervention that emphasizes information, support and guidance to family members that is practical and applicable to more adults with SMI. Wellness Self Management estimates are obtained from aggregate reports from clinicians trained by the Evidence-Based Practices Technical Assistance Center (EBP-TAC). For Wellness Self-Management, fidelity is assured via the Practice Fidelity Measure, "Educational Supervision of WSM: Core Competencies Checklist". This list has 28 items measuring 5 areas of competency. 2. Total number receiving services is greater than the total number of SMI data is because the data source for this EBP (T17) is less accurate than the data source for total SMI served.
20A, 20B	CY2008 data. DMHIS does not collect multiple races. Pacific Islander included with Asian. The total number of discharges from State PC has increased due to State PC transformation plan started in 2008 that reduced LOS and increased number of admissions.
