URS Table Number	General Notes
3	The increase in the total number of consumers served in state psychiatric hospitals is due to a move to have our state hospitals closer to capacity as we decrease our inpatient care. Focusing more on problems cases and referring more acute case back out to the community.
5A	Our more acute patients have been referred out to private providers leaving us many of harder to serve clients. This group of clients is more likely to be SED/SMI and primarily Medicaid / Medicare covered resulting in a decrease in the total number of consumers with non-Medicaid funding.
6	We have seen additional movement as there has been a call to, again, make additional outside referrals with our more acute population. This has been changing our numbers, as with more referral, we have been going through our waitlist and moving clients from our outpatient programs to our community based programs.
9	We have been experiencing additional movement by clients due to referrals that might be influencing perception of outcomes.
14A	NAC 433.040 "Adult with a serious mental illness" and "child with a serious emotional disturbance" defined for counting purposes. (NRS 433.324) Each division facility shall use the following definitions to count the number of persons in this state who are adults with a serious mental illness or children with a serious emotional disturbance: 1. "Adult with a serious mental illness" means a person who is at least 18 years old and has been diagnosed within the immediately preceding 12 months as having a mental, behavioral or emotional disorder as defined in the "Diagnostic and Statistical Manual of Mental Disorders," as adopted by reference in NAC 433.050, other than an addictive disorder, mental retardation, irreversible dementia or a disorder caused by an abuse of alcohol or drugs, which interferes with or limits one or more major life activities of the adult. 2. "Child with a serious emotional disturbance" means a person who is less than 18 years old and has been diagnosed within the immediately preceding 12 months as having a mental, behavioral or emotional disorder as defined in the "Diagnostic and Statistical Manual of Mental Disorders," as adopted by reference in NAC 433.050, other than a mental disorder designated as a Code V disorder in the Manual, a developmental disorder or a disorder caused by an abuse of alcohol or drugs, which substantially interferes with or limits the child from developing social, behavioral, cognitive, communicative or adaptive skills or his activities relating to family, school or community. The term does not include a child with a disorder which is temporary or is an expected response to stressful events. (Added to NAC by Common on Men. Health & Men. Retardation, eff. 8-24-88; A 11-19-90; R128-97, 11-14-97)
14A	NRS 433B.045 "Child with an emotional disturbance" defined: "Child with an emotional disturbance" means a child whose progressive development of personality is interfered with or arrested by mental disorder so that he shows impairment in the capacity expected of him for his age and endowment for: 1. A reasonably accurate perception of the world around him; 2. Control of his impulses; 3. Satisfying and satisfactory relationships with others; 4. Learning; or 5. Any combination of these factors. (Added to NRS by 1993, 2708)— (Substituted in revision for NRS 433B.080)
14A	402.36 Severe Emotional Disturbance (SED): 1. Persons from birth through 48 months who currently or at any time during the past year (continuous 12-month period) have a: a). DC:0-3 Axis I diagnostic category in place of a DSM Axis I diagnostic category; or b). DC:0-3 Axis II PIR-GAS score of 40 or less (the label for a PIR-GAS score of 40 is "Disturbed"); or 2. Persons from 4 to age 18 who currently or at any time during the past year (continuous 12-month period) have a: a). Diagnosable mental or behavioral disorder or diagnostic criteria that meets the coding and definition criteria specified in the DSM (excluding substance abuse or addictive disorders, irreversible dementias, mental retardation, developmental disorders, and V codes, unless they co-occur with a serious mental disorder that meets DSM criteria); and have a: b). Functional impairment which substantially interferes with or limits the child from achieving or maintaining one or more developmentally appropriate social, behavioral, cognitive, communicative or adaptive skill. Functional impairments of episodic, recurrent, and persistent features are included, however may vary in term of severity and disabling effects unless they are temporary and an expected response to stressful events in the environment. Children who would have met functional impairment criteria during the referenced year without the benefit of treatment or other support services are included in this definition.3. SED determinations are made by a Qualified Mental Health Professional (QMHP) within the scope of their practice under state law and expertise.
16 & 17	With more referrals being made to outside providers we will see a decrease in several other service areas including the total number of consumers receiving supported housing services, integrated dual diagnosis services, and medication management services.
20A	There has been a change in the release of clients and outpatient referral. With clients presenting fewer problems, there has been a change in policy to refer these individuals to outside outpatient providers when released by inpatient programs. We do not see these outside providers referring clients back to a more restrictive inpatient care.

URS Table Number	General Notes
20B	<p>While not the goal to have all involuntary clients return this appears to be the case this last year. This group of clients in general have more difficulties than our voluntary clients. We are often unable to find outside providers that would be able to work with this group, so they are in general, placed in a state ran outpatient program where the additional resources are available. Community reach out programs are facilitated and housing / financial concerns are addressed. Higher need clients have a higher readmit rate and if need requires they are then returned to prior inpatient care. While this rate is not the desired outcome it does give us insight to future goals and possible changes</p>
