State used Federal SMI Definition? No - See attachment
 Diagnoses included in State SMI definition See attachment
 State used Federal SED Definition? Yes

Note:
 This table uses data from URS/DIG Table 14a, Table 14b and from the US Census Bureau. All denominators use US Census data from 2009
 US totals are calculated uniquely for each data element based on only those states who reported clients served.

Regional groupings are based on SAMHSA's Block Grant Regions.

Note:

Admission Rate= number of admissions divided by total served during the year

US Admissions During Year uses data from states reporting data only. States are only included in "US Total Served" if they also reported data on admissions.

US Total Served During Year is calculated using data in URS/DIG Table 3.

This table uses data from URS/DIG Table3 and 6.

Kansas

URS Table Number	General Notes
4/4A	Employment status is collected for all KS adult mental health consumers at admission. Monthly updates to employment status are collected for adults with SPMI while they are receiving specialized services. Totals represent the employment status of consumers admitted or updated during FY10.
6	The ALOS for FY09 is based on a very small number of youths. The length of stay for one youth contributed to the high average for FY09. The median for this population is 8 days.
6	At the end of fiscal year 2010, Kansas no longer operated state hospitals for children/youth under age 18. Kansas SRS/Mental Health has contracted with KVC Behavioral Healthcare to provide inpatient treatment of children and adolescents who would have otherwise been referred to a state mental health hospital. Treatment responsibilities for this population were transferred prior to May 3, 2010.
9, 11	The Kansas Department of Social and Rehabilitation Services (SRS) contracted with the Kansas Foundation for Medical Care, Inc. (KFMC) to conduct the 2010 Kansas Medicaid Mental Health Consumer Satisfaction Surveys for Kansas Health Solutions? (KHS) members. In conducting the surveys, KFMC used the Centers for Medicare & Medicaid Services (CMS) "Administering Surveys" protocol and worksheet. The Mental Health Statistics Improvement Program (MHSIP) Youth Services Survey (YSS), Youth Services Survey for Families (YSS-F) and Adult Consumer Survey tools were selected for use in the project.
14A	FY2010 totals for Asian race (234) are 22% higher than the numbers reported for FY09 (192). Dramatic shifts in percentages of Kansas consumers of Asian race from year to year are generally due to the relatively small actual totals for this population, however a portion of the increase in FY2101 is attributable to local efforts at CMHCs to increase localized outreach to this population.
14A	FY2010 totals for American Indian/Alaska Native race (1,850) are 22% higher than the numbers reported for FY09 (1,518). Moderate increases in the percentage of people reported as American Indian were seen throughout the state, with CMHC catchment areas located near Indian reservations experiencing higher than average increases in numbers. This is partially due to efforts by these local CMHCs to increase localized outreach to this population.
15	Living situation is collected for all KS mental health consumers at admission. Monthly updates to living situation are collected only for adults with SPMI and children with SED while they are receiving specialized services.
16	The number of consumers receiving Supported Employment services represent those consumers that have received services based on broadly defined federal guidelines. Kansas collects data on a subset of the population receiving Supported Employment Services from CMHC staff trained using the Dartmouth toolkit and monitored for fidelity through a contract between SRS/Mental Health and the University of Kansas. For FY2010, there were 1,211 adults with SPMI who received Supported Employment Services following this monitoring protocol. This represents 57.5% of all consumers receiving Supported Employment Services during FY10 and 12.9% of the total SPMI population.
16	Kansas experienced a 37% decrease in the number of children placed in Therapeutic Foster Care from FY2009 to FY2010, partially due to the increasing availability of Psychiatric Residential Treatment Facilities coupled with a reduction in the number of Therapeutic Foster Care homes available for placement.
17	The number of adults Receiving Integrated Treatment for Co-occurring Disorders (MH/SA)) represent those adult consumers that have received services based on broadly defined federal guidelines. Kansas collects data on a subset of the population receiving Integrated Treatment for Co-occurring Disorders from CMHC staff trained using the Dartmouth toolkit and monitored for fidelity through a contract between SRS/Mental Health and the University of Kansas. For FY2010, there were 875 adults with SPMI who received Integrated Treatment for Co-occurring Disorders following this monitoring protocol. This represents 38.1% of all consumers who receiving Integrated Treatment for Co-occurring Disorders during FY10 and 9.3% of the total SPMI population.

METHOD TO DEFINE ADULTS WITH SPMI FINAL DRAFT

PURPOSE: To insure that adults with Severe and Persistent Mental Illness (SPMI), or who are most at risk of developing SPMI, are promptly and accurately identified.

To insure that those most in need are offered the full array of community- based mental health services necessary to successfully manage their illness, support their recovery process, and live meaningful lives in their community.

APPROACH: Apply two main areas of assessment to determine an individual's status as meeting criteria for SPMI: (1) diagnostic criteria, and (2) functional and risk criteria.

STEP ONE: Apply diagnostic criteria to determine an individual's identification as meeting initial criteria for CSS target population. To meet diagnostic criteria for SPMI, individuals must be assessed to determine whether they have a principal diagnosis in either Category A or Category B.

Category A Diagnoses:

295.10	Schizophrenia , Disorganized Type
295.10	Schizophrenia, Catatonic Type
295.30	Schizophrenia, Paranoid Type
295.60	Schizophrenia, Residual Type
295.70	Schizoaffective Disorder
295.90	Schizophrenia, Undifferentiated Type
296.34	Major Depressive Disorder , Recurrent, Severe, with Psychotic Features
	Bipolar I Disorders that are Severe, and/or with Psychotic Features
298.9	Psychotic Disorder NOS

Category B Diagnoses:

All Other Bipolar I Disorders, not listed in Category 1

296.89	Bipolar II Disorder
296.23	Major Depressive Disorder , Single Episode, Severe, Without Psychotic Features
296.24	Major Depressive Disorder, Single Episode, With Psychotic Features
296.32	Major Depressive Disorder, Recurrent, Moderate
296.33	Major Depressive Disorder, Recurrent, Severe, Without Psychotic Features
296.35	Major Depressive Disorder, Recurrent, In Partial Remission
296.36	Major Depressive Disorder, Recurrent, In Full Remission
297.10	Delusional Disorder

- 300.21 **Panic Disorder** with Agoraphobia
- 300.3 **Obsessive-Compulsive Disorder**
- 301.83 **Borderline Personality Disorder**

Category C Diagnoses:

The following diagnoses (as a principal diagnosis) are excluded from those defining an individual as having SPMI or being most at risk of SPMI

Anti-Social Personality Disorder

Behavior Disorder

Developmental Disorders

Neurological/General Medical Disorder

Substance Abuse Disorders

Psychotic Disorder [Substance-included only]

DSM-IV-R “V” Codes

STEP TWO: To meet functional criteria for SPMI, persons with a primary diagnosis in Category A or B must, as a result of their qualifying diagnosis, demonstrate impaired functioning through use of the following assessment. For those with a primary diagnosis in Category A who **do** meet the functional criteria listed below, no further assessment is needed to determine eligibility for CSS. Those with a primary diagnosis in Category B must meet these criteria as well as criteria outline in Step 3.

Impaired functioning¹ is evidenced by meeting at least one (1) of the first three criteria, and at least three (3) of the criteria numbered 4 through 9 that have occurred on either a continuous or intermittent basis over the last two years:

1. Required inpatient hospitalization for psychiatric care and treatment more intensive than outpatient care at least once in her/his lifetime;
 2. Experienced at least one episode of disability requiring continuous, structured supportive residential care, lasting at least two months (e.g. a nursing facility, group home, half-way house, residential mental health treatment in a state correctional facility);
 3. Experienced at least one episode of disability requiring continuous, structured supportive care, lasting at least two months, where the family, significant other or friend of the consumer provided this level of care in lieu of the consumer entering formalized institutional services. (In this care, the intake assessment must fully document the consumer’s level of severe disability and lack of functioning that required the family or other person to provide this level of care);
-
4. Has been unemployed, employed in a sheltered setting, or has markedly limited skills and a poor work history;
 5. Requires public financial assistance for their out-of-institutional maintenance and is unable to procure such financial assistance without help;

¹ Adults that would have met functional impairment criteria during the referenced time period without the benefit of treatment or other support services are included here.

6. Shows severe inability to establish or maintain a personal support system, evidenced by extreme withdrawal and social isolation;
7. Requires help in instrumental activities of daily living such as shopping, meal preparation, laundry, basic housekeeping, and money management;
8. Requires help in attending to basic health care regarding hygiene, grooming, nutrition, medical and dental care, and taking medications. (*Note: this refers to the lack of a basic skill to accomplish the task, not to the appropriateness of dress, meal choices, or personal hygiene*);
9. Exhibits inappropriate social behavior not easily tolerated in the community, which results in demand for intervention by the mental health or judicial system (e.g. screaming, self-abusive acts, inappropriate sexual behavior, verbal harassment of others, physical violence towards others).

STEP THREE: For individuals with a primary diagnosis in Category B, eligibility for CSS **always** depends upon a more detailed determination of risk and functional impairment (through face-to-face assessment). Only those with a Category B diagnosis who also meet these traditional criteria in Step Three are guaranteed eligibility for Community Support Services (CSS) through a CMHC.

Individuals with a primary diagnosis in Category A do not need to meet the traditional criteria in Step Three **unless** they failed to demonstrate impaired functioning as evidenced by the criteria outlined in Step Two.

SRS will make available a tool for CMHC staff to use in making this determination.

RELATED POLICIES:

1. The emphasis on diagnostic categories for purposes of determining eligibility for CMHC/CSS services only, and is not in any way a recommendation to rely on a person's diagnosis to determine specific treatment approaches or service modalities. It remains a policy of SRS/MHAAPS to reinforce a practice approach that is based on each individual's unique strengths, characteristics, life situation, desires, and resources.
2. CMHC/CSS staff qualified to make determinations regarding a person's SPMI status must meet QMHP statutory criteria as defined by the State of Kansas. It remains the right of the CMHC to make a determination of a person's SPMI status for the purposes of being found eligible for CMHC/CSS services.
3. It is the responsibility of any CMHC/CSS staff performing an SPMI determination to fully explain to the individual the purpose of the determination, the process involved, and their rights/appeal process.
4. The access standards as outlined in CMHC contracts with SRS/MHAAPS apply to the process of determining an individual's status in meeting the target population definition criteria.
5. During determination of an individual's status as having SPMI, the person shall have access to a basic package of CMHC services, including medication management, crisis case management and crisis services, substance abuse treatment, and outpatient treatment. For those individuals who do not meet the criteria for SPMI status, but who do need some mental

health intervention, they shall continue to have access to this basic package of CMHC services.

6. If a person's status is SPMI at termination of CMHC/CSS services or upon transfer to another CMHC, the person's status shall continue as SPMI upon re-enrollment or transfer.
7. Once an individual is determined to meet SPMI status and is receiving CMHC/CSS services, periodic review of the intensity and frequency of the services being provided will be done with the consumer by the CMHC at least every twelve (12) months, and may be done more frequently as determined by SRS/MHAAPS, the CMHC, or at the consumer's request. SRS QE staff will monitor CMHC/CSS performance in completing these reviews during licensing visits or periodic site visits. Documentation of this review with consumers must be kept in each person's CMHC/CSS records.
8. SRS QE staff will monitor CMHC/CSS performance in accurate application of the process used to determine individuals' SPMI status during licensing reviews or periodic site visits. Documentation of SPMI status demonstrating a person's eligibility to receive CSS services must be kept in each person's CMHC/CSS records.
9. As of September 1, 2001, all CMHC's will use this approach to determine a person's SPMI status and eligibility for CSS. For new enrollees the determination process will be included at intake. For current CSS consumers the determination process will be completed no later than her/his second 90-day review. For those receiving medication services only, the determination process will be completed no later than her/his third 90-day review.
10. For consumers who have been receiving CSS services for more than 6 (six) months prior to September 1, 2001, who have been found that they do not meet the new eligibility criteria, a process of examination can be made:
 - a. The CMHC will provide through its quality assurance and utilization review process documentation explaining how the level of treatment being provided matches the unique conditions and situation of the consumer, AND how the consumer is actively being transitioned to naturally-occurring community supports;
 - b. The CMHC's Quality Enhancement (QE) staff person will as part of her/his licensing visit or period site visits, review a portion of consumer's records for whom an exemption to this eligibility determination has been made; and
 - c. The CMHC will report quarterly (in written form) the number of individuals comprising exemptions to the new target population definition process. This report will be made to the CMHC's assigned QE staff person, or to MHAAPS central office if the CMHC lacks a QE assignment. Corrective action may be taken with CMHC's who are making an inordinately large number of exemptions to the new target population definition process.

NOTE: Six to nine months after implementation of this new target population definition procedure, MHAAPS will conduct a review to determine its effectiveness. Adjustments may be made in any or all sections of the determination approach depending on results from the review process. To that end, CMHC's will need to be prepared to report data to MHAAPS or its contracted agent concerning implementation of this approach to defining the target population.
