#### **Note:**

\*In Labor Force is the sum of consumers employed and unemployed.

\*\*With Known Employment Status is the sum of consumer employed, unemployed and not in labor force.

Consumers employed as a % of those in labor force uses adults employed and unemployed as the denominator.

Consumers employed as % of known employment status uses the sum of persons employed, unemployed and not in labor force as the denominator.

This table uses data for URS/DIG Table 4a.

#### **State Notes:**

Discrepancies in tables 4-4a due to clients receiving services at multiple CMHSc during FY11 and reorting in separate diagnostic groups.

## Kansas

URS Table Number	General Notes
4/4A	Employment status is collected for all KS adult mental health consumers at admission. Monthly updates to employment status are collected for adults with SPMI while they are receiving specialized services. Totals represent the employment status of consumers admitted or updated during FY11.
6	By the end of fiscal year 2010, Kansas no longer operated state hospitals for children/youth under age 18. Kansas SRS/Mental Health has contracted with KVC Behavioral Healthcare to provide inpatient treatment of children and adolescents who would have otherwise been referred to a state mental health hospital. Treatment responsibilities for this population were transferred prior to May 3, 2010.
11	The Kansas Department of Social and Rehabilitation Services (SRS) contracted with the Kansas Foundation for Medical Care, Inc. (KFMC) to conduct the 2010 Kansas Medicaid Mental Health Consumer Satisfaction Surveys for Kansas Health Solutions? (KHS) members. In conducting the surveys, KFMC used the Centers for Medicare & Medicaid Services (CMS) "Administering Surveys" protocol and worksheet. The Mental Health Statistics Improvement Program (MHSIP) Youth Services Survey (YSS), Youth Services Survey for Families (YSS-F) and Adult Consumer Survey tools were selected for use in the project. Confidence levels: Because the agreement rates tended to be high and many of the denominators were below 100, the "Exact Method" (also known as the Clopper-Pearson method) was used.

14A	Kansas has not established a primary race identifier. Distinct race information is provided by client report and is collected/reported as distinct race information to the AIMS system. When multiple race origins are reported in AIMS, the client is identified in URS as having More Than One Race. Clients that report a single race differently at more than one CMHC are also considered to have reported more than one race, although collected from separate CMHC records. There was an 18% increase in the number of people reporting More Than One Race during FY11 compared to FY10. Comparison of the data for both fiscal years does not readily provide a reason for this increase. While the explanation for this increase is not readily apparent, at the individual CMHC level there was an overall increase in the number of clients reporting multiple racial origins during FY11. Combined with the logic that is used to combine single race records that are submitted by different CMHCs, it is possible that the increase reported during FY11 is also due in part to an increase in the number of clients receiving mental health services from more than one CMHC.
15	Living situation is collected for all KS mental health consumers at admission. Monthly updates to living situation are collected only for adults with SPMI and children with SED while they are receiving specialized services.
16	The amounts reported in Column C (Supported Employment) represent those consumers that have received services based on broadly defined federal guidelines. Kansas collects data on a subset of the population receiving Supported Employment Services from CMHC staff trained using the Dartmouth toolkit and monitored for fidelity through a contract between SRS/Mental Health and the University of Kansas. For FY2011, there were 1,026 adults with SPMI who received Supported Employment Services following this monitoring protocol. This represents 58.7% of all consumers receiving Supported Employment Services during FY10 and 11.6% of the total SPMI population.
17	The amounts reported in column C (Receiving Integrated Treatment for Co-occurring Disorders (MH/SA)) represent those adult consumers that have received services based on broadly defined federal guidelines. Kansas collects data on a subset of the population receiving Integrated Treatment for Co-occurring Disorders from CMHC staff trained using the Dartmouth toolkit and monitored for fidelity through a contract between SRS/Mental Health and the University of Kansas. For FY2011, there were 1,075 adults with SPMI who received Integrated Treatment for Co-occurring Disorders following this monitoring protocol. This represents 48.2% of all consumers who receiving Integrated Treatment for Co-occurring Disorders during FY11 and 12.1% of the total SPMI population.
20B	The percentage of forensic readmissions within 180 days (10% - 28/279) during FY11 represents an increase of 29.1% over the FY10 percentage (7.8% - 22/283). Dramatic shifts in the percentage of readmissions for this population are typically due to the small numbers used in calculating the percentage. However, we are researching this further to determine specific causes for this increase.
