65 or Older	0	0	0	0	0	0

NOTE: In 2004, a split-sample design was implemented for adults aged 18 or older. Respondents assigned to sample A were administered the long form of the serious psychological distress (SPD) module. Respondents assigned to sample B were administered the short form of the SPD module plus the adult depression module. The analysis weights for each subsample were poststratified separately to the U.S. census population estimates of the civilian, noninstitutionalized population aged 18 or older for various demographic domains. The population totals for each subsample may differ slightly for demographic domains that were not controlled or controlled differently in the poststratification. Six respondents broke off their interviews prior to their split-sample assignment; therefore, they are not included in this table. See Sections A.1 and A.3.2 of Appendix A of the *Results from the 2004 National Survey on Drug Use and Health: National Findings*. For further information on how the split-sample design was implemented for the creation of the SPD and adult depression estimates presented in the 2005 Detailed Tables, see Sections B.4.4 and B.4.5 of the *Results from the 2005 National Survey on Drug Use and Health: National Findings*.
