1. Introduction

The 2017 National Survey on Drug Use and Health (NSDUH) was the 37th in a series of general population surveys designed to provide annual nationwide data on substance use patterns and behaviors in the United States. The scope of the 2017 survey allowed for the production of data estimates for the nation, each of the 50 states, and the District of Columbia. Before 2002, the survey was known as the National Household Survey on Drug Abuse (NHSDA).¹

NSDUH is funded by the Substance Abuse and Mental Health Services Administration (SAMHSA), an agency in the U.S. Department of Health and Human Services. SAMHSA contracted with RTI International² to conduct activities including sampling, counting and listing, screening, interviewing, data processing, and reporting. This report examines the preparations and procedures used in carrying out the data collection tasks and presents the results of data collection.

Data collection preparatory work for the 2017 NSDUH, including a kickoff meeting, began in February 2016. After conducting the January 2017 training sessions with all returning veteran field interviewers, data collection work began on January 6, 2017, and was completed by December 20, 2017. The field staff of approximately 600 field interviewers worked to complete a total of 68,032 interviews using computer-assisted interviewing.

[Table 1.1](#) provides approximate time frames for the various tasks completed.

The remainder of this report addresses the following topics relating to data collection for the 2017 NSDUH: Sampling and Counting and Listing Operations, Data Collection Staffing, Preparation of Survey Materials, Field Staff Training, Data Collection, Data Collection Results, and Quality Control.

¹ Throughout this report, a reference made to a past NSDUH implies a past NHSDA because the two names refer to the same annual survey.

² RTI International is a registered trademark and a trade name of Research Triangle Institute.

Table 1.1 Schedule of Major Data Collection Activities

Activity	Approximate Time Frame
Conduct 2017 data collection preparations kickoff meeting.	March 1, 2016
Recruit listing staff.	March–April 2016
Conduct counting and listing and create lists of sample dwelling units.	April–December 2016
Prepare computerized screening and interviewing programs.	May–November 2016
Recruit field interviewers for Quarter 1, 2017 (replacement staff also hired throughout the year as needed).	October–December 2016
Prepare manuals and materials for trainings.	May 2016–January 2017
Conduct veteran field interviewer training sessions.	January 2017
Conduct new-to-project field interviewer training sessions.	January–October 2017
Conduct and manage screening and interviewing operations.	January 6–December 20, 2017
Conduct verification operations.	January 13–December 28, 2017

2. Sampling and Counting and Listing Operations

2.1 Overview of Sampling Procedures

A coordinated sample design was developed for the 2014–2017 National Surveys on Drug Use and Health (NSDUHs) and will be extended to the 2018–2022 NSDUHs. The sample design for the 2017 NSDUH, as a subsample of the multiyear study, consisted of a deeply stratified, multistage area probability design. At the end of this chapter, [Exhibit 2.1](#), in conjunction with [Table 2.1](#), presents details of the sample design. The coordinated 2014–2022 design uses a 50 percent overlap in third-stage units (area segments) within each successive 2-year period from 2014 through 2022; that is, half of the third-stage units in the 2017 survey were retained from the 2016 NSDUH. The other half of the segments used for the 2017 survey will be used again for the 2018 survey. Those segments not retained will be "retired" from use.

The sample selection procedures began by geographically partitioning each state into roughly equal-sized state sampling regions (SSRs). These regions were formed as a means of stratification so that each area within a state would yield roughly the same number of interviews during each data collection period. This partitioning divided the United States into 750 SSRs made up of counties or groups and parts of counties.

The first stage of selection for each of the 2014–2022 surveys was census tracts. This stage was included to contain sample segments within a single census tract to the extent possible.¹ Within each SSR, a sample of 48 census tracts was selected with probabilities proportional to size and with minimum replacement.

For the second stage of selection, adjacent census block groups were aggregated within selected census tracts as necessary to meet the minimum dwelling unit (DU) requirement.² Then one second-stage unit (consisting of one or more census block groups) was selected per sampled census tract with probability proportionate to size and with minimum replacement. The selection of census block groups was included to facilitate possible transitioning to an address-based sampling (ABS) design in the future.

Because census block groups generally exceeded the minimum DU requirement, selected census block groups were subdivided into smaller geographic areas of adjacent census blocks—called segments—that served as the third-stage sampling units. One segment per selected census block group, or a total of 48 segments per SSR, were selected (with probabilities proportional to size): 20 to field the 2014–2017 studies and 28 to serve as backups in case of sample depletion, to field any supplemental studies that the Substance Abuse and Mental Health Services

¹ Some census tracts had to be aggregated to meet the minimum DU requirement.

² In California, Florida, Georgia, Illinois, Michigan, New Jersey, New York, North Carolina, Ohio, Pennsylvania, Texas, and Virginia, the minimum DU requirement was 250 DUs in urban areas and 200 DUs in rural areas. In the remaining states and the District of Columbia, the minimum requirement was 150 DUs in urban areas and 100 DUs in rural areas.

Administration (SAMHSA) may request, or to extend the sample beyond 2017. An equal probability subsample of eight segments from each SSR was used for the 2017 NSDUH. For the 2017 survey, a total of 6,000 segments within the 750 SSRs were selected. Of the total, 3,000 segments were overlap segments used during the 2016 survey, 2,995 were new, and 5 were duplicates of other segments used in the previous surveys. For this last category, the same area had been listed previously under a different segment identification number, so the original listing was used instead of relisting the same area.

After selecting these new areas, the process of counting and listing (C/L) the DUs within each new segment ensued. New segments to be used in 2017 were listed between April and December 2016. Once all DUs for a particular quarter were listed, the fourth-stage selection process identified sample dwelling units (SDUs) for inclusion in the study.

At the fifth stage of selection, individuals were sampled at different rates based on age. No race/ethnicity groups were purposely oversampled for the 2017 survey. The 2017 NSDUH was designed to oversample younger age groups by allocating the sample to five age-group strata as follows: 25 percent for youths aged 12 to 17, 25 percent for young adults aged 18 to 25, 15 percent for adults aged 26 to 34, 20 percent for adults aged 35 to 49, and 15 percent for adults aged 50 or older.

2.2 Recruiting and Training for Counting and Listing

Preparations for C/L activities began with the decision to use the existing NSDUH data collection management structure to supervise counting and listing. All current field supervisors (FSs) were asked to handle the administrative tasks for the listers hired for their area. These tasks included completing the initial recruiting and hiring process, managing new lister mentoring and segment assignments, overseeing the timely completion of segments, and approving weekly time and expense reports. For technical supervision such as how to handle a specific segment, all listers contacted either the C/L manager or the Sampling Department at RTI International for answers and advice.

Beginning in March 2016, FSs recruited listing personnel from their existing staff of field interviewers (FIs). Experienced and new listers not currently working as FIs were also available for hire. All hired listers received a certification training package containing materials including a C/L manual, a C/L manual updates memorandum, a hire letter, and instructions on accessing and completing four iLearning courses and a home study via the Internet. The four iLearning courses completed by all hired listers contained a lesson and assessment portion. The courses provided detailed training in topical areas such as listing multi-unit structures and group quarters, creating correct paths of travel, working efficiently, and avoiding common listing errors. Listers had to complete all four iLearning courses before completing the electronic home study. The home study included questions about C/L procedures as well as path-of-travel exercises. Both the iLearning courses and home study could be completed from any computer with Internet access.

Hired listers who were not already working as FIs on NSDUH received an additional memorandum containing instructions for completing two additional courses: Confidential Information Protection and Statistical Efficiency Act of 2002 (CIPSEA) Training and Records

Management Training. Listers who were not working as FIs on NSDUH also received instructions for signing a Data Collection Agreement.

Listers had 2 weeks upon receipt of the certification training package to complete the certification process, which included reviewing the C/L manual; completing the four iLearning courses; and passing the electronic home study with a score of 70 percent or higher on each of two sections. Staff hired as listers only (not working as FIs) had 1 week upon receipt of the memorandum to complete the CIPSEA and Records Management Training courses and to return a signed Data Collection Agreement. For FI listers, these requirements were satisfied as part of the 2016 NSDUH Veteran and New-to-Project FI Training sessions.

To work as a lister on NSDUH, all the requirements of the certification process had to be met. Of the 348 certification training packages distributed, 16 listers did not pass one or both sections of the electronic home study on their first attempt. Eleven listers received feedback and retraining on questions missed and were given a second opportunity to retake the home study. Nine of the 11 listers passed on their second attempt. Five newly hired listers were not given a second opportunity at the request of the FS and regional supervisor (RS) because of poor performance. In addition, six listers did not actually complete any listing work because of resignations or terminations before their certification was completed.

A total of 335 listers were hired and certified. They worked from April through December 2016 to complete C/L operations for the 2017 NSDUH. Of the 335 listers, 167 worked as FIs on the 2016 NSDUH. In addition, 252 were returning listers from the 2016 C/L effort.

Certified listers received their bulk listing supplies before beginning work. FSs assigned segments to listers via the web-based Case Management System (CMS), carefully considering the location and availability of their staff. After receiving their assigned segment materials packets, listers were then authorized to begin their C/L assignments. Listers sent their completed assignments directly to the Sampling Department, where the assignments were carefully edited. To improve the quality of the listing process, suggestions for improvement were provided to listers when necessary. Segments with significant errors were either refiled (for correction of major errors) or were corrected by sampling staff through discussions with the lister. In some cases, the lister returned to the segment to review the items in question.

2.3 Counting and Listing Procedures

Before the start of actual C/L field work, segment materials packets were assembled at RTI. Each packet contained maps of the selected area, listing forms, and blank segment information sheets. A copy of the maps remained at RTI for reference when assisting with problems encountered in the field.

Beginning in April, segment materials packets were assigned and sent to those listers who had completed the certification process and were ready to begin listing. Once the remaining staff became certified, they received assignments as well. Listers recorded the address or description of up to 400 DUs in each segment.

As in previous years, several procedures were implemented to maximize efficiency and minimize the time required to count and list a segment. In many cases the "count" step was eliminated: The lister could immediately list the segment unless, during the initial trip around the boundaries of the segment, it was apparent the segment had experienced additional construction or the lister determined that the segment was large (400+ DUs). As done on prior rounds of NSDUH, a rough count procedure was allowed for segments containing large geographic land areas, large DU counts (400+ DUs), or significant growth in residential DUs (typically, 1,000 DUs). This procedure permitted listers to obtain an approximate count of residential DUs in these segments from secondary sources—such as the post office, fire department, or county or city planning office—without having to conduct an exact count.

If a lister came across a segment that needed subsegmenting, the lister completed a field count and returned the initial DU counts to the Sampling Department. In some cases, subsegmenting occurred over the telephone (any segment with 400+ DUs generally required subsegmenting). In cases involving traveling listers, the telephone subsegmenting process allowed the lister to count and list a segment with 400 or more DUs in one trip. This was beneficial because a second trip would likely result in a delay of 1 or 2 weeks. For difficult subsegmenting tasks, the segment materials were sent to RTI to be handled directly by sampling staff. Of the 2,995 new segments listed for the 2017 survey, 683 required subsegmenting. When obvious and possible, sampling staff completed any needed subsegmenting before assigning the segment to the lister. In a few cases where the subsegmenting was conducted before assigning the segment to the lister, the census counts were outdated and the selected area was still too large to list. As a result, these areas had to be subsegmented a second time using field counts provided by the lister.

The counting and listing of new segments for the 2017 NSDUH was completed by the end of November 2016. Once the segments were listed and the completed segment materials packets were received at RTI, an editing process of the completed materials checked for and deleted any DUs located outside segment boundaries, ensured that listing sheets matched segment sketches and maps, and verified that proper listing order and related listing rules were observed. During this editing process, the sampling staff also checked all subsegmenting that occurred in the field to ensure it was done correctly.

Listed DUs were keyed into a computer control system. A selection algorithm was applied to all 2017 segments, and it selected the specific SDUs to be contacted for the study. Before the beginning of the appropriate quarter, FSs assigned segments (or partial segments) to their interviewing staff. FIs received all assigned SDUs on their tablet. Selected units were also printed on Selected DU Lists. These lists, along with copies of the handwritten listing forms and maps, were distributed to the assigned FI before the start of each quarter.

2.4 Added Dwelling Units

During the screening process, FIs were trained to identify any unlisted DUs that existed within or on the property of the SDU. If the missed DUs were housing units, they were automatically entered in the tablet (up to established limits) and selected for participation. At most, the FI could independently add 5 missed DUs per SDU and a maximum of 10 missed DUs per segment. If the FI discovered more than these amounts or if the missed DUs were group

quarters units, the FI called their FS. The FS then either called the Sampling Department for further instructions or instructed the FI to contact sampling staff directly, depending on the situation.

Although no upper limit was placed on the total number of DUs that could be added to a segment by the Sampling Department, FIs were instructed to notify their FS of any significant listing problems. In a small number of segments, portions of these segments had to be relisted during the screening and interviewing phase. [Table 2.2](#) indicates the number of segments that experienced added DUs, as well as the total number of added DUs for the 2017 NSDUH.

2.5 Problems Encountered

2.5.1 Controlled Access

In many of the major urban areas, listers had some difficulties gaining access to locked buildings and, in particular, had some trouble listing very large public housing complexes. Access in some suburban areas proved problematic as well; more and more planned communities have intercoms, guarded gatehouses, or entryways with cameras and buzzer systems. Access to military bases, college dormitories, boarding schools, and large retirement communities also proved problematic at times. Based on experience, these types of access problems were expected. Protocols were in place to handle them promptly and, in some cases, avoid them entirely.

Access problems were typically resolved through effective follow-up efforts of supervisory staff, including the use of situation-specific letters requested by the FSs and/or RSs.

2.5.1.1 Military Bases

As in past years, access to military bases was handled with a formal and standardized approach for 2017. Through joint RTI and SAMHSA efforts, a contact person within the Pentagon for each branch of the service was identified. These individuals were advised in advance of base selections for the year. They then notified the base commanders regarding RTI's need to access these bases for both listing and screening and interviewing work. Additionally, RTI staff sent standard letters and informational packages to help obtain access to all selected bases. These efforts were effective: Access to most of the selected bases was secured.

2.5.1.2 Colleges and Universities

Access to colleges and universities can sometimes be problematic. RTI used several standard approaches to accommodate the concerns of school administrators. Having standardized letters available that addressed recurring issues with a variety of attachment options was very effective.

Most schools requested or required only a letter stating the sponsor and the purpose of the study and identifying the lister or data collection staff. However, some schools wanted more complete information and the right to approve the field data collection procedures and personnel working in and around their campuses. Most of these situations resulted in packages being sent that contained the following:

1. RTI Institutional Review Board information;
2. Office of Management and Budget approval information;
3. descriptive information about the procedures and data collection plan; and
4. various study materials used with respondents during data collection.

In the end, most private educational institutions expressing concerns cooperated in the C/L phase of the 2017 NSDUH.

2.5.2 Segments with Reassigned Quarters

Fifty-five segments were identified during the C/L phase as difficult to access during months with unusual weather. Most access problems were due to roads being impassable because of snow during the winter months or roads being inaccessible because of rain. If segments with weather or geographic access problems were selected for a quarter in which the access would be a problem (generally Quarters 1 or 4), the segment was switched with a segment in the same region for an appropriately paired time period. For example, inaccessible Quarter 1 segments were switched with Quarter 2 segments in the same region that would be more accessible during Quarter 1; Quarter 4 segments were switched with more easily accessed Quarter 3 segments. Generally, the "switched" segment was selected because it was more urban or had more accessible roads.

In a few locations, such as some areas in Alaska, there were no segments that were better for reassignment during the problematic time period. When that happened, staff made prompt assignments, emphasized early completion of the work, and tried to plan around good weather forecasts to accomplish the field work as early in the period as possible.

2.5.3 Edited Addresses

In 2017, FIs continued to follow the detailed Editing Address Protocol initially implemented in Quarter 1 of 2006. This protocol emphasized the importance of exercising care when editing addresses, which in turn could alter the sample frame, particularly if the edit created a duplicate address.

FIs encountering a potential address change referred to a chart that listed various editing address scenarios, along with instructions to follow in each scenario.

Project management closely monitored reports on the web-based CMS for any potential problems resulting from address changes. A Duplicate Address report, updated daily, captured edited addresses made by FIs that produced duplicate listings. A separate Edited Address report, also updated daily, listed changes made to addresses other than those appearing on the Duplicate Address report.

As a result of the continued monitoring of edited addresses using the Editing Address Protocol, the incidence of problems potentially affecting the sampling frame was minimal. Any such problems were handled carefully by sampling staff to maintain the integrity of the NSDUH sample.

Table 2.1 2017 NSDUH Sampling Summary

Statistic	California	Florida, New York, and Texas	Illinois, Michigan, Ohio, and Pennsylvania	Georgia, New Jersey, North Carolina, and Virginia	Hawaii	Remaining 37 States and District of Columbia	Total
Total Sample							
SSRs	36	90	96	60	12	456	750
Segments	288	720	768	480	96	3,648	6,000

58	1	961

*Total number of added dwelling units (DUs) = 961.

Exhibit 2.1 2017 NSDUH Sample Design Summary

First Stage of Selection for the NSDUH: Census Tracts

The 2014–2022 NSDUH design provided for estimates by state in all 50 states and the District of Columbia. States should therefore be viewed as the "first level" of stratification as well as a reporting variable. The survey's sample was designed to yield the following:

- 4,560 completed interviews in California;
- 3,300 completed interviews each in Florida, New York, and Texas;
- 2,400 completed interviews each in Illinois, Michigan, Ohio, and Pennsylvania;
- 1,500 completed interviews each in Georgia, New Jersey, North Carolina, and Virginia;
- 967 completed interviews in Hawaii; and
- 960 completed interviews in each of the remaining 37 states and the District of Columbia.

The 2005–2013 NSDUHs were designed to yield 3,600 respondents in each of 8 "big" states and 900 respondents in each of the remaining 42 "small" states and the District of Columbia. Compared with the 2005–2013 sample design, the 2014–2022 design more closely resembles a proportional allocation of sample to states. In addition, to accommodate state and local policymakers' need for substate estimates in Kauai County, Hawaii, the sample was designed to yield a minimum of 200 completed interviews in this county over a 3-year period. To achieve this goal while maintaining precision at the state level, the sample in Hawaii consisted of 67 completed interviews in Kauai County and 900 completed interviews in the remainder of the state, resulting in a total of 967 completed interviews.

The larger sample sizes obtained at the state level, along with small area estimation techniques refined under previous NSDUH contracts, enabled the development of estimates for all states, for several demographic subgroups within each state (i.e., age group and race/ethnicity group), and for some core-based statistical areas (CBSAs) and a few small areas in the larger states.

The "second level" of stratification defined contiguous geographic areas within each state. These state sampling regions (SSRs) were of approximately equal population size in terms of allocated samples within states.

Additional implicit stratification was achieved by sorting the first-stage sampling units by a CBSA/SES (core-based statistical area/socioeconomic status) indicator¹ and by percentage of non-Hispanic/Latino white. The first-stage sample units for the 2014–2022 NSDUHs were selected from this well-ordered sample frame. Forty-eight census tracts per SSR were selected with probabilities proportionate to a composite size measure and with minimum replacement.

Second Stage of Selection for the NSDUH: Census Block Groups

Within sampled census tracts, adjacent census block groups were combined as necessary to meet the minimum dwelling unit (DU) size requirement. In California, Florida, Georgia, Illinois, Michigan, New Jersey, New York, North Carolina, Ohio, Pennsylvania, Texas, and Virginia, this minimum size requirement was 250 DUs in urban areas and 200 DUs in rural areas. In the remaining states and the District of Columbia, the minimum requirement was 150 DUs in urban areas and 100 DUs in rural areas.

Exhibit 2.1 2017 NSDUH Sample Design Summary (continued)

One census block group or second-stage sampling unit then was selected within each sampled census tract with probability proportional to population size. Compared with the selection process used for the 2005–2013 NSDUHs, the selection of census block groups is an additional stage of selection that was included to facilitate possible transitioning to an address-based sampling (ABS) design in a future survey year.

Data from roughly one fourth of the final sample of respondents were collected during each calendar quarter. This important design feature helped control any seasonal bias that might otherwise exist in drug use prevalence estimates and other important NSDUH outcome measures of interest.

Third Stage of Selection for the NSDUH: Segments

For the third stage of sampling for the 2014–2022 NSDUHs, each of the selected census block groups was partitioned into noncompact clusters of DUs by aggregating adjacent census blocks. Consistent with the terminology used in previous NSDUHs, these geographic clusters of blocks were referred to as segments. Segments were formed so that they contained the minimum number of DUs required (see definition above) and were constructed using 2010 Decennial Census data supplemented with revised population counts obtained from outside sources. A sample DU in NSDUH refers to either a housing unit or a group quarters unit (such as a dormitory room or a shelter bed).

One segment was selected within each selected census block group, with probability proportionate to size. Segments were formed so that they contained sufficient numbers of DUs to support three annual NSDUH samples. This allows half of the segments used in any given year's sample to be used again in the following year as a means of improving the precision of measures of annual change. This also allows any special supplemental sample or field test that SAMHSA wishes to conduct in any given NSDUH year to be conducted within the same segments.

In order to coordinate the sample selection for 2014 through 2017, 48 census tracts were selected within each SSR; 1 census block group was selected per sampled census tract; and 1 segment was selected per sampled census block group, resulting in a total of 48 segments. An equal probability subsample of eight segments was used for the 2017 NSDUH. These eight segments were randomly assigned to quarters and to two panels within each quarter. The panels used in the 2017 NSDUH were designated as Panels D and E. Panel D segments were used for the 2016 and 2017 surveys. Panel E segments were used for the 2017 survey and will be used again for the 2018 survey. New DUs (i.e., those not previously selected for the 2017 survey) will be selected from the Panel E segments for 2018.

Fourth Stage of Selection for the NSDUH: Dwelling Units

Before any sample selection within selected segments began, specially trained staff listed all DUs and potential DUs within each newly selected area segment. A DU is either a housing unit for a single household or one of the eligible noninstitutional group quarters that are part of the defined target population. The listings were based primarily on observation of the area segment and could include vacant DUs and units that appeared to be DUs but were actually used for nonresidential purposes. The objective was to attain as complete a listing as possible of eligible residential addresses; any false positives for residences were eliminated during the household screening process after the sample was selected.

The sampling frame for the fourth stage of sample selection was the lines of listed DUs and potential DUs. After accounting for eligibility, nonresponse, and the fourth-stage sample selection procedures, it was determined that 200,092² selected DUs were needed to obtain a sample of 67,507 respondents distributed by state and age group. During the 2017 survey, however, a total of 217,756 DUs were selected and yielded a final respondent sample of 68,032 (as shown in [Table 2.1](#)).

Exhibit 2.1 2017 NSDUH Sample Design Summary (continued)

As in previous years, if a field interviewer encountered any new or missed DUs on the premises of a selected DU (e.g., a garage apartment), the new and missed DUs were selected into NSDUH.³ In addition, field interviewers were instructed to call their supervisors if they noticed large differences in the segment listing and what they encountered in the field. These procedures were implemented to minimize bias that might have been introduced because of errors and/or omissions in counting and listing activities and also to minimize any bias that might have been associated with using "old" segment listings.

Fifth Stage of Selection for the NSDUH: People

After DUs were selected within each segment, a field interviewer visited each selected DU to obtain a roster of all individuals aged 12 or older residing in the DU. This roster information was then used to select zero, one, or two individuals for the survey. Sampling rates were preset by age group and state. Roster information was entered directly into the electronic screening instrument, which automatically implemented this fifth stage of selection based on the state and age group sampling parameters.

Using an electronic screening instrument also provided the ability to impose a more complicated person-level selection algorithm at the fifth stage of selection. As a result of this unique design feature, *any* two survey-eligible individuals within a DU had some chance of being selected; that is, all survey-eligible pairs of people had some nonzero chance of being selected. This design feature is of interest to NSDUH researchers because it allows analysts to examine how the drug use propensity of one individual in a family relates to that of other family members residing in the same DU (e.g., the relationship of drug use between a parent and child). Originally added in 2002 and modified in 2014 to account for the design changes, an additional parameter in the person selection process increased the number of selected pairs within DUs without unduly diminishing response rates.

As illustrated in [Table 2.1](#), at the fifth stage of selection, 97,667 respondents were selected from 138,061 screened and eligible DUs. A total of 68,032 completed interviews were obtained from these 97,667 selected respondents.

Expected Precision of NSDUH Estimates

The multistage, stratified NSDUH design has been optimally constructed to ensure adequate precision for key outcomes of interest while minimizing data collection costs. Compared with the sample allocation in prior years, the 2014–2022 design allows for a more cost-efficient sample allocation to the largest states, while maintaining a sufficient sample size in each of the smaller states to support small area estimation at the state and substate levels. Further, the 2014–2022 design increases the 26 or older sample size to more accurately estimate drug use and related mental health measures among this age group. The expected precision for key outcome measures is included in the 2017 NSDUH Methodological Resource Book sample design report (Center for Behavioral Health Statistics and Quality, 2018).

¹ The four categories are defined as (1) CBSA/low SES, (2) CBSA/high SES, (3) Non-CBSA/low SES, and (4) Non-CBSA/high SES.

² See the 2017 NSDUH sample design plan (Morton, Aldworth, Kott, & Shook-Sa, 2016).

³ If a large number of new and missed dwelling units are encountered (generally greater than 10), then a sample of the missed dwelling units will be selected.

3. Data Collection Staffing

The magnitude of the National Survey on Drug Use and Health (NSDUH) required a field data collection management structure robust enough to support the interviewing staff and flexible enough to manage an ever-changing variety of issues. The basic management structure remained unchanged from prior surveys: field supervisors (FSs) managed states and substate regions and reported to regional supervisors (RSs) who then reported to regional directors (RDs) who reported directly to the National Field Director. However, based on the NSDUH sample design for 2017, careful consideration was required to determine the most effective and cost-efficient distribution of work within each level of management. This chapter discusses the process of staffing the 2017 NSDUH data collection effort.

3.1 Regional Directors

The RDs managed data collection within defined territories of the nation. Reporting directly to the National Field Director, the RDs, working with the project director and the National Field Director, served as the management team for all data collection operations.

All RDs were survey managers with many years of experience at RTI International and on NSDUH. Each RD managed a staff of RSs, who in turn managed a staff of six or seven FSs who managed the team of field interviewers (FIs) in their individual states or assigned areas. The traveling field interviewers (TFIs) were managed by a TFI manager in Quarter 1, 2017. Beginning in Q2, RSs took over managing one to three TFIs each. One RD served as the coordinator of TFI management.

RDs also had project-wide ancillary functions not specific to their region. These included coordinating controlled access communications, FS recruiting, and TFI manager work.

In Quarter 1, 2017, the nation was divided between two RDs for data collection. The RDs in place at the end of 2016 continued their roles on the 2017 NSDUH.

[Exhibit 3.1](#), at the end of this chapter, displays the RD regions and management task assignments at the end of the 2017 NSDUH. Listed under each RD is the structure containing the number of RSs and FSs, geographic regions, and the ancillary management functions.

3.2 Regional Supervisors

The RSs were the direct managers of six or seven FSs. Reporting to an RD, RSs were responsible for all data collection activities in the states in their region. The states, including the District of Columbia, were clustered geographically to be managed by the RSs. Of the six RSs on the supervisory team at the start of 2017, all had served as RSs throughout the 2016 survey. In Quarter 3, 2017, one individual moved out of the RS role. A former NSDUH FS, who worked as an RS on other RTI studies after leaving NSDUH, was chosen to fill the RS position. See [Exhibit 3.1](#) for the final groupings of states managed by each RS.

3.3 Field Supervisors

The FSs were the first-level supervisors of FIs conducting data collection in each of the states. The FSs assigned work, monitored progress, resolved problems, and managed the day-to-day activities of their FIs. Each FS reported directly to an RS.

In addition, at least two substitute FSs were available to provide coverage for FSs who were on vacation or experiencing emergencies. The substitute FSs also helped with FI recruiting, problem resolution, and mentoring of new FIs as needed. If multiple regions requested assistance at the same time, project management assessed where the greatest needs were and assigned the substitute FSs accordingly.

At the end of 2017, there were 40 FSs (see [Exhibit 3.1](#)).

3.4 Field Interviewers and Traveling Field Interviewers

One of the primary FS functions was the continuous recruiting and hiring of the FI staff needed to complete the data collection work each quarter. Subcontractor Headway Workforce Solutions is the staffing agency serving as the employer of record for all FIs hired for the NSDUH. FSs worked with Headway's Center for Operational & Recruitment Excellence (CORE) to identify potential FI candidates. Multiple recruiting approaches were used, including:

- reviewing Headway's Interviewer Database, which contains information of previous RTI interviewers who are eligible for rehire, as well as candidates from previous recruiting efforts who were considered qualified but not hired;
- networking;
- placing newspaper advertisements and posting informative job flyers;
- providing recruiting business cards;
- placing job ads with various community organizations (e.g., departments of labor, retired teachers' associations, AARP);
- contacting job service agencies; and
- using Internet job advertising and search services.

Networking involved any or all of the following contacts:

- other FSs;
- RTI staff working on other surveys with potential FIs available;
- other survey research organizations; and
- other FIs (current NSDUH FIs recommending successful candidates received a recruiting bonus).

Those with general interviewing experience, and especially those with experience working on government surveys, were given preference in hiring. However, candidates with transferable skills and experience—such as contact with the public, attention to detail, and organizational skills—were considered.

The work of an interviewer requires a wide range of skills and abilities. Some of the characteristics and qualities that FSs tried to identify in potential hires included:

- intelligence;
- dependability;
- sensitivity and objectivity;
- honesty;
- ability to follow instructions;
- reading ability;
- listening skills;
- motivation;
- availability; and
- flexibility.

Interested individuals submitted a resume and applicant packet to CORE that included professional references, education, and employment history. Applicants were provided comprehensive, realistic information about the role of an FI on NSDUH. CORE recruiters communicated verbally with the applicants throughout the hiring process. Materials including an official job description, a recruiting video, and an informational brochure were also provided.

A CORE representative reviewed the applicant packets for minimum qualifications and completeness. Next, CORE conducted screening calls with favorable applicants. If the applicant passed the CORE screening, the application was passed to the FS for review. FSs then contacted qualified applicants over the telephone to determine if a video interview was warranted. Viable FI candidates still interested in the job were interviewed by the FS using behavior-based questions that required the candidates to provide examples about how they handled specific situations in the past. For example, an FS might say, "Tell me about the last time you were in a situation where you had to approach a stranger to extract some sort of information. How did you do it?" Also during the interview, the FS fully explained the requirements and responsibilities of the NSDUH FI's job, described the project expectations, and defined the required time commitment. The FS then probed the candidate's job and interviewing history.

The FS completed a video interview and reference checks for viable candidates moving forward in the recruiting process. If the reference checks were satisfactory and the FS still considered the person a viable FI candidate after the interview, the FS then recommended the candidate for hire. Criminal background and driving history checks were completed before the candidate attended a training session. FSs documented progress with each candidate on a NSDUH FI Recruitment and Interview Documentation Form. This form standardized the

interview process and ensured each FI candidate received all essential project information and job requirements.

At each new-to-project (NTP) interviewer training session during 2017, fingerprint impressions were collected from all newly hired FIs for further investigation by the U.S. Office of Personnel Management (OPM) and the Federal Bureau of Investigation (FBI). This was a requirement for employment, and any FIs who chose not to have fingerprints taken were ineligible for employment as a NSDUH FI.

It was essential that staff hired to serve as FIs understood and were committed to the standards of confidentiality and excellence required by NSDUH. To help ensure this, all individuals hired to serve as FIs were required to read and sign a Data Collection Agreement in the presence of a Notary Public (see [Exhibit 3.2](#)). Failure to comply with the provisions of this agreement would have resulted in termination from NSDUH.

FSs attempted to hire bilingual interviewers who spoke Spanish fluently in those sample areas with large Spanish-speaking populations. Before an FS hired a bilingual candidate, each applicant was screened by an RTI language methodologist to assess the applicant's English- and Spanish-language abilities. The assessment involved reading and speaking in English and Spanish. The bilingual candidate had to meet these assessment requirements satisfactorily before he or she could be hired and trained as an RTI-certified bilingual interviewer.

Another subset of specialized interviewers was the TFIs. Each RD region had access to a team of TFIs with proven interviewing experience.

Each TFI was asked to commit to at least two 10- to 14-day trips each quarter. TFI team members were used to fill unmet needs in areas with staffing shortfalls or where special needs arose (such as covering long-term illnesses among the staff). In 2017, 15 TFIs worked on the study, including 6 bilingual interviewers who were assigned to areas where no bilingual interviewer was available.

[Exhibit 3.3](#) displays a flow chart that gives a general view of the major steps in the FI recruiting and hiring process.

During the entire data collection period, a total of 759 FIs completed training and worked on the study. The following are demographic characteristics of the interviewing staff:

- Of the total 759 FIs, 554 (73.0 percent) were veteran interviewers who had worked on the 2016 NSDUH, whereas 205 (27.0 percent) were newly hired and trained during 2017.
- Of the total 759 FIs, 484 (63.8 percent) were white; 88 (11.6 percent) were black or African American; 187 (24.6 percent) identified themselves as "Other" (including Asian, American Indian or Alaska Native, Native Hawaiian or Other Pacific Islander, etc.); and 118 (15.6 percent) were bilingual in Spanish.

At the end of this chapter, [Table 3.1](#) provides a distribution of interviewers by race and gender for the veteran interviewers, [Table 3.2](#) for new interviewers trained during 2017, and [Table 3.3](#) for the total. [Table 3.4](#) provides a distribution of veteran interviewers by language ability and gender, [Table 3.5](#) for new interviewers, and [Table 3.6](#) for the total.

3.5 Problems Encountered

3.5.1 Continued Staffing Shortfall in Certain Areas

In certain areas, the number of staff working continued to be less than the targeted number of FIs needed. This targeted number was based on:

- allocation of the sample across the FI regions each quarter;
- number of hours that an average FI would work each week, based on recent experience;
- average length of time to complete each screening;
- average length of time to complete each interview; and
- number of weeks that the interviewing staff would likely work in the quarter based on recent experience.

As each quarter's sample was provided by the statisticians, the process to estimate the number of needed FIs was repeated. The assumptions were refined based on the most recent experience. The number of FIs needed from quarter to quarter varied, so FSs had to review staff assignments throughout the quarter and continually recruit and hire additional FIs.

While most areas were close to the targeted number, some areas struggled. To compensate for these problem areas, TFIs were used to perform the work. Supervisors also borrowed FIs from other areas to complete the work. These borrowed FIs had completed their initial assignment and were willing to travel and take on additional work.

3.5.2 FI Turnover

In 2017, the overall turnover¹ rate among FIs was 27.7 percent, an increase from 24.8 percent in 2016.

The continuing FI turnover meant Headway's CORE group and FSs had to continually recruit new staff, and FSs had to juggle assignments to ensure all work was completed appropriately. There were significant costs associated with continuous recruiting efforts, including the time of the FSs and the RTI office staff and training of the newly hired staff. Additional costs were incurred when TFIs had to be sent to work in areas where no FI was available.

To combat FI turnover, RTI and Headway's CORE group took a variety of steps, including:

- recruiting and carefully selecting qualified staff who understood the demands of the job before being hired;
- training staff thoroughly and mentoring all new staff in the field;

¹ FI turnover rate was referred to as "attrition rate" in reports prior to 2008. The calculations for this rate remain unchanged; the terminology has been changed to more accurately describe these calculations.

- supporting staff with individual calls at least once each week, group calls at least once each quarter, and a series of five regional group calls with new FIs to reinforce project protocols, build skills, and address challenges common to new FIs; and
- providing assurance of never being alone: there is always someone to call for assistance.

Table 3.1 Distribution of 2017 Veteran Interviewers, by Race and Gender

Race	Male		Female		Total	
	Count	%	Count	%	Count	%
Black or African American	6	4.7	45	10.6	51	9.2

Exhibit 3.2 Data Collection Agreement

 DATA COLLECTION AGREEMENT	Project Name: <u>National Survey on Drug Use and Health</u> Project No.: <u>0213986</u>
<p>I, _____, an employee of Headway, agree to provide field data collection services for the benefit of RTI in connection with the RTI Project shown above ("the Project"). Further, I</p> <ol style="list-style-type: none"> 1) am aware that the research being conducted by RTI is being performed under contractual arrangement with the Substance Abuse and Mental Health Services Administration (SAMHSA); 2) hereby accept all duties and responsibilities of performing specified data collection tasks and will do so personally, in accordance with the training and guidelines provided to me. At no time will I engage the services of another person to perform any data collection tasks for me without the prior written approval of both my employer (Headway) and RTI; 3) agree to treat as confidential all information secured during interviews or obtained in any Project-related way during the period I am working on the Project, as required by the Confidential Information Protection and Statistical Efficiency Act of 2002 (CIPSEA), and understand, under Section 513 of this Act, I am subject to criminal felony penalties of imprisonment for not more than five years, or fines of not more than \$250,000, or both, for voluntary disclosure of confidential information. Any breach of confidentiality must be reported immediately to the National Field Director. This information will be shared with the SAMHSA Project Officer and Headway. I have also completed and fully understand the CIPSEA training provided to me; 4) agree to treat as confidential and proprietary to RTI/SAMHSA any and all information provided by the public, whether collected or accessed in electronic or printed form during the course of my service on this Project, including but not limited to all data collection computer software and respondent data, and will protect such items from unauthorized use or disclosure; 5) am aware that the survey instruments completed form the basis from which all analyses will be drawn, and therefore, agree that all work for which I submit invoices will be legitimate, of high quality and performed in compliance with all Project specifications to ensure the scientific integrity of the data; 6) understand that I am fully and legally responsible for taking all reasonable and appropriate steps to ensure that any computer equipment issued to me for use on this Project is safeguarded against damage, loss, or theft. I also understand that I have a legal obligation to immediately return all equipment at the conclusion of my assignment or at the request of my supervisor; 7) fully agree to conduct myself at all times in a manner that will obtain the respect and confidence of all individuals that I encounter as a representative of the Project and I will not betray this confidence by divulging information obtained to anyone other than authorized Project representatives of RTI; 8) understand that evidence of falsification, fabrication or distortion of any data collected for this Project will be reported to RTI's Scientific Integrity Committee, and such acts are grounds for immediately removing me from the Project and can result in my suspension from any government-funded research. Also, if falsification of data is substantiated, I understand a formal fraud complaint will be submitted to the U.S. Department of Health and Human Services' Office of Inspector General (OIG) and I could be subject to criminal and/or civil prosecution and thereby face imprisonment, financial penalties or both; 9) understand my obligations under this agreement supersede any prior or existing agreements on the same subject matter and will survive the termination of any assignment with RTI and/or my employment by Headway.

Note: Taleo is the software used to track candidates through the recruitment process.

This page intentionally left blank

4. Preparation of Survey Materials

RTI International and Substance Abuse and Mental Health Services Administration (SAMHSA) staff reexamined and updated the computer-assisted interviewing (CAI) program, the tablet screening program, as well as all other manuals and interview materials in preparation for the 2017 National Survey on Drug Use and Health (NSDUH). Training sessions were held for veteran and new field interviewers (FIs), and these required meticulous planning.

4.1 Screening

Referencing the 2016 screening program, several changes were made to prepare the 2017 screening program. [Exhibit 4.1](#), at the end of this chapter, contains a complete list of changes from 2016 for the 2017 screening program.

4.2 Questionnaire Development

4.2.1 CAI Instrument

Referencing the 2016 CAI instrument, several changes were made to prepare the 2017 CAI instrument. [Exhibit 4.2](#) contains a detailed list of all changes implemented between the 2016 and 2017 instrument versions.

For the 2017 NSDUH, TTS software continued to be used to produce audio for the audio computer-assisted self-interviewing (ACASI) portion of the interview. TTS uses a computer-generated voice to read on-screen text. Materials used during the interview, including the Showcard Booklet, were also updated.

4.2.2 Spanish Translations

Referencing the Spanish CAI instrument, the changes in the questionnaire and interview materials referred to above were translated and incorporated. TTS software was used to produce Spanish audio to allow respondents to listen to the ACASI sections in Spanish if they chose to do so.

4.3 Manuals and Miscellaneous Materials Development

4.3.1 Manuals

Based upon the 2016 manuals, updated versions of the manuals listed below were prepared. These new versions provided all staff, both experienced and new, with accurate, detailed manuals for both training and reference:

- Field Interviewer Manual: New-to-project (NTP) field staff received an FI Manual detailing all aspects of an interviewer's work requirements on the 2017 NSDUH. This manual was sent to new FIs for review before attending NTP training. It was used throughout the training sessions and served as a ready reference when questions arose

during fieldwork throughout the year. In 2017, to conserve resources, veteran field staff received an electronic version of the 2017 FI Manual rather than a hard copy. All FIs could also access the 2017 FI Manual directly from the CAI Manager on the laptop computer and from the FI Assistant feature on the tablet. For supervisory and management staff, the FI Manual was available for reference on the web-based Case Management System (CMS). Veteran FIs were also provided a reference sheet listing important changes made to the manual for 2017.

- Field Interviewer Computer Manual: This companion FI manual provided details about hardware use and care issues for both the tablet and the laptop computer. The computer manual included instructions for using the programs on each computer, transmission steps, and a troubleshooting guide to assist staff encountering technical difficulties. The computer manual was included with—but bound separately from—the FI Manual so FIs could easily include it in their computer bag as a quick reference while working. In 2017, new FIs received a copy of the computer manual along with the 2017 FI Manual before attending NTP training. To conserve resources, veteran FIs were asked to reference their 2016 FI Computer Manual. Veteran FIs received two appendices to supplement their hardcopy version. In December 2016, veteran FIs received Appendix B, which explained the use of the YubiKey security device to access the CAI Manager on the laptop. Before the start of Quarter 2, 2017, FIs received Appendix C, which described the process for completing periodic software updates on the laptop computer. For NTP FIs, these appendices were printed and bound in the hardcopy manual. All FIs could also access the 2017 FI Computer Manual directly from the FI Assistant feature on the tablet. The computer manual was also available on the CMS for supervisory and management staff.
- Field Supervisor Manual: This detailed manual for field supervisors (FSs) included instructions and tips for recruiting field staff and managing the counting and listing (C/L) effort and screening and interviewing work. Instructions on how to use the CMS were provided for reference. The manual presented strategies for using information on the CMS to manage staff, as well as strategies for handling administrative issues. New FSs received a hard copy of this manual as part of their training. Veteran FSs, regional supervisors (RSs), and regional directors (RDs) could reference this manual on the CMS.
- Field Supervisor Computer Manual: Explanations of the equipment provided for FSs (computer, all-in-one printer, and peripherals) were included in this separate volume along with instructions on using the various software tools (Windows/Microsoft Word/Microsoft Excel, e-mail, UPS tracking, etc.). New FSs received a hard copy of this manual as part of their training. Veteran FSs, RSs, and RDs could reference this manual on the CMS.
- Regional Supervisor Manual: This manual provided specific guidelines for RSs on supervising the FSs in their region and reporting requirements to the RDs. Separate chapters provided instructions for managing the various stages of NSDUH, including FI recruitment, C/L, and screening and interviewing. RSs and RDs could reference this manual on the CMS.

- Counting and Listing Manual: This manual included explanations and examples of the detailed C/L procedures. All listers received copies of the manual. Supervisory and management staff working on the C/L effort could reference this manual on the CMS.
- Data Quality Manager and Consistency Check Manuals: These manuals documented the procedures followed by the Data Quality Team in the verification process and in resolving consistency check problems.
- Guide to Controlled Access Situations: This manual, available to all management staff, documented the various ways to try to gain admittance in challenging access situations. Supervisory and management staff could reference this manual on the CMS.
- NSDUH Best Practices Guidebook: This guidebook for project management staff provided details about issues such as chain of command, use of the project network drive, who to include on various e-mails, and other specific project-related procedures, protocols, and activities.

4.3.2 Miscellaneous Materials

Modifications from the 2016 versions were made to the following respondent materials:

- Lead Letter (updated the expiration dates in the FI ID badge image);
- Study Description (updated the survey year and Office of Management and Budget [OMB] expiration date; added "International" when referring to RTI International's Office of Research Protection);
- Quality Control Form (updated the survey year and OMB expiration date);
- Interview Incentive Receipt (updated the survey year);
- Doorperson Letter (updated the expiration dates in the FI ID badge image);
- SAMHSA Authorization Letter (updated the survey year);
- NSDUH Respondent Website (updated the survey year; made minor text updates; updated the NSDUH in the News information page with more recent articles and reports; added a video containing footage from the most recent NSDUH press conference);
- NSDUH Highlights (updated text to reflect the 2015 study results);
- News Article handout (updated with new articles featuring information on substance use in the United States and alcohol and marijuana use among college students);
- Summary of Questionnaire (updated the survey year); and
- Showcard Booklet (updated the survey year; separated the showcards into English and Spanish sections for ease of use; in the Job Aids section, removed the Steps to Maximize Data Quality and replaced it with the Screening and Interview Task List from the FI Manual, updated the Informed Consent Reference Guide to include use of the Parental Introductory script on the tablet, and updated the Interview Process and Equipment Maintenance Checklist to include the use of the YubiKey; removed the

Lead Letter, Study Description, and Summary of Questionnaire because interviewers have paper copies to use with respondents; added Instructions for Using the FI Manual on the Laptop to the Quick Reference Guide).

For 2017, two Center for Behavioral Health Statistics and Quality (CBHSQ) Spotlights, *One-Third of Young Adults With Any Mental Illness Received Mental Health Services In The Past Year* (CBHSQ, 2016a) and *One In Ten Older Adolescents Are Current Smokers* (CBHSQ, 2016b), were available for distribution to FIs.

The following respondent materials remained virtually unchanged from 2016 for use in 2017:

- Appointment Card;
- Certificate of Participation;
- Other Language Introduction Card;
- Spanish Card; and
- Sorry I Missed You Card (English and English/Spanish versions).

4.4 Submission of the 2017 NSDUH IRB Package

Once the 2017 survey materials and CAI and tablet screening specifications were finalized, a pre-review meeting was held with RTI's Institutional Review Board (IRB) on March 17, 2016, to review and discuss any changes from the 2016 NSDUH. As a result of that meeting, the IRB determined that the 2017 NSDUH IRB package could be submitted for expedited review (rather than full committee review) because of the minor nature of changes planned for 2017. The 2017 NSDUH IRB package was submitted to the IRB for expedited review on April 12, 2016. Full IRB approval of the 2017 NSDUH was received on May 31, 2016.

4.5 Preparation for New-to-Project Field Interviewer Training

This section reviews the main steps necessary to prepare for NTP FI trainings.

4.5.1 Home Study Package

Prior to training, each new FI hired for screening and interviewing work was sent a home study package containing:

- 2017 Field Interviewer Manual;
- 2017 Field Interviewer Computer Manual;
- cover memorandum from the National Field Director;
- paper version of the home study exercises; and
- background investigation requirements memorandum.

The new FIs were instructed to:

- read all manuals;
- complete the home study exercises; and
- complete the IRB and the Confidential Information Protection and Statistical Efficiency Act (CIPSEA) training courses.

The home study exercises and training courses were completed via the Internet before traveling to NTP training. Exercises were graded automatically and results were posted to the CMS for FS review. Any new FI scoring less than 80 percent on the home study was not allowed to attend training and was terminated from the Headway system. Based on past experience, it was evident that additional resources should not be devoted to any prospective FI unable to score at least 80 percent on the home study and that he or she should not be allowed to attend training.

Appendix A contains the NTP home study memorandum, while Appendix B contains the home study exercises. Any new FI scoring less than 80 percent on the IRB training course received retraining on the questions missed during NTP training. Of the 205 new FIs who attended NTP training, 4 FIs did not pass the IRB training course and were retrained.

4.5.2 New-to-Project Training Supplies

Using a master list of needed supplies, all supplies were prepared, ordered (if necessary), and stored in preparation for training activities throughout the survey year.

4.5.2.1 Printed Materials Related to Training

While using computers for data collection greatly reduced the production of printed materials, many paper forms were still necessary, particularly for training. A detailed, near-verbatim guide was prepared for each member of the training team. Along with the training guide, numerous printed materials were developed:

- Data Collection Agreements for all new FIs to signify they agreed to follow procedures and maintain confidentiality;
- Training Workbook that contained necessary exercises, printed examples, screening scripts, and additional instructions;
- Training Segment Materials packet with example listing and locating materials for the practice segment used in training;
- Mock Scripts bound together for four different paired mocks, including the screening and interview scripts for each case;
- Quality Control Forms specifically for the various training cases;
- Interview Incentive Receipts for use during the practice interviews;
- Showcard Booklets for training and use during subsequent fieldwork;
- Supplies to be used during the course of training, including the Lead Letter, Study Description, Q&A Brochure, and various tools used for obtaining participation, such

as News Articles, RTI/SAMHSA Fact Sheet, Certificate of Participation, Who Uses the Data handout, "Sorry I Missed You" cards, NSDUH Highlights, and CBHSQ Spotlights; and

- Certification Materials used during the certification process at the conclusion of training.

4.5.2.2 Training Videos

Video segments that played directly from the trainer laptops during training provided controlled, standardized, visual presentations of the various tasks assigned to FIs. These videos contained multiple segments for use throughout the course of new FI training. Various videos detailing important screening and interviewing activities were used in 2017. New FIs also viewed the "NSDUH Study Results" video, which was updated for 2017 to include clips from the 2015 NSDUH Data Release Press Conference.

4.5.2.3 iLearning Training Program

In 2017, use of the web-based multimedia, interactive training application—referred to as iLearning (which stands for independent learning)—was continued. Except for the CIPSEA, Records Management, and Cybersecurity Awareness Training courses described as follows, all other iLearning courses were delivered via Mindflash, an online training software and management service. iLearning allowed FIs to complete training courses at their own pace and review portions of the course again as needed. Each course consisted of visual slides with text and graphics, an audio component providing important information and instructions, video presentations, and an assessment portion ensuring the FI's comprehension of the material presented. Upon completion of the course, the assessment results were posted to the CMS for FS review.

The courses used during the 2017 NTP training sessions included:

- IRB Training: This course covered the ethics and regulations involving research on human subjects, the role of the IRB, and the role of the FI in protecting respondents' rights.
- Cybersecurity Awareness Training: This training described the requirements and responsibilities for protecting sensitive data and other information from unauthorized access, use, and disclosure. This course was completed by NTP FIs after returning home from training.
- CIPSEA Training: This course described the CIPSEA requirements to protect information collected on NSDUH and the role of the OMB in providing oversight and designating statistical agencies under CIPSEA.
- Records Management Training: This training described federal requirements and responsibilities for records management. Beginning in March 2016, this course was completed by NTP FIs after returning home from training.
- Bilingual Training: This course was completed by NTP bilingual FIs after returning home from training, and before conducting any NSDUH screenings and interview in Spanish.

After being in the field for 1 month, NTP FIs were required to complete additional iLearning courses. These courses were originally developed for previous veteran FI training programs and were completed online via Mindflash. October NTP graduates did not complete the courses and instead focused their efforts on preparation for the 2018 Veteran Training session. These courses included:

- Using Your Segment Materials: This course explained the overall sampling process and reviewed the proper use of the segment materials and the importance of maintaining the sample integrity. Common errors associated with using the segment materials were explained as well.
- Challenging Field Situations: This course shared approaches for handling challenging situations in the field, including controlled access, reluctant respondents, refusals, and other related topics. A brief review of the uses and importance of NSDUH data was included.
- NSDUH FI Essentials: This course discussed key project procedures and protocols including reading verbatim, following screening and interview procedures, and answering respondent questions.
- FI Quarterly Review: This course reviewed key project procedures and protocols and was completed by all FIs prior to the start of Quarters 2 and 3 in 2017. This course also addressed answering respondent questions, gaining cooperation, and other helpful refusal topics. Within the course, the assessment questions and content varied from quarter to quarter in order to expand the topics covered.

Creation of the iLearning courses was a complex and detailed effort, including many steps during the development and testing process to ensure all components of the course functioned properly. Use of iLearning enabled a more individualized and interactive training model.

4.5.3 New-to-Project Bilingual Training

FIs who were hired as bilingual FIs completed the "Bilingual Training" iLearning course via Mindflash after returning home from training. After finishing the course, bilingual FIs also completed a scripted screening and interview exercise in Spanish on their own to become familiar with the Spanish terminology and its pronunciations in both instruments. After completing this training, these FIs were deemed RTI-Certified bilingual FIs, and as such, they are the only FIs allowed to conduct NSDUH screenings and interviews in Spanish.

4.6 Preparation for Veteran Field Interviewer Training

The 2017 veteran FI training program began in November and December 2016 with iLearning courses and exercises completed independently at home by all veteran FIs. These activities prepared FIs for the 2-day in-person training session held the first week in January 2017 at three sites around the country. This section reviews the main steps necessary to prepare for this veteran training program.

4.6.1 Veteran Training and Data Collection Preparations Packages

Veteran FIs continuing for 2017 were instructed to successfully complete all veteran training iLearning courses and exercises following a specified timeline. In November 2016, veteran FIs received an e-mail from the National Field Director containing instructions and deadlines for iLearning training courses.

Each iLearning course included an assessment portion with five questions. After FIs completed the iLearning courses, the results were posted on the CMS. FSs reviewed any missed questions with FIs prior to their scheduled in-person training session. Any FI not achieving a score of 80 percent or higher for each course was required to complete additional training before beginning Quarter 1 fieldwork. Section 4.6.2.3 contains brief course descriptions.

In a separate shipment sent in December 2016, all veteran FIs received a bulk supplies package containing:

- cover memorandum from the National Field Director, including a detailed list of changes made to the FI Manual and Computer Manual for 2017;
- 2017 NSDUH FI Manual Replacement Pages – Chapter 11;
- 2017 NSDUH FI Computer Manual – Appendix B;
- NSDUH Materials "Keep" List;
- Materials Inventory Tracking Form (2 copies);
- UPS Envelopes; and
- veteran FI bulk supplies.

Appendix C contains the cover memorandum. Before attending an in-person Veteran FI Training session in January 2017, veteran FIs were instructed to:

- review the 2017 FI Manual and FI Computer Manual changes chart;
- review Appendix B of the 2017 FI Computer Manual;
- review Chapter 11 of the 2017 FI Manual and insert the replacement pages in their hardcopy FI Manual; and
- recycle or discard any 2016 materials not listed on the NSDUH Materials "Keep" List before unpacking their bulk supplies.

4.6.2 Veteran Training Supplies

Using a master list of needed supplies, all supplies were prepared, ordered (if necessary), and stored in preparation for training activities.

4.6.2.1 Printed Materials Related to Training

A detailed, near-verbatim Veteran Training Guide was prepared for each member of the training team. Based in part on the guide developed for 2016, most sections of the guide were

newly developed to present relevant topics for 2017. Along with the training guide, the 2017 NSDUH Veteran Training Workbook was developed, containing:

- necessary exercises;
- printed examples; and
- additional instructions.

4.6.2.2 Training Videos

A short video welcoming FIs to the 2017 veteran training program was shown in the "2017 Veteran FI Training Introduction" course.

4.6.2.3 iLearning Training Program

As explained in Section 4.5.2.3, iLearning courses were developed for the 2017 NSDUH. Refer back to Section 4.5.2.3 for additional details on the iLearning training program.

The iLearning courses created and used during 2017 veteran training included courses just for veteran FIs:

- 2017 Veteran FI Training Introduction Video: This short introduction video provided an overview of the veteran training program and 2015 NSDUH Data Release Press Conference.
- 2017 NSDUH Training Readiness: This course provided an overview of essential project protocols and procedures to ensure success at training and in the coming year. An explanation of the instrumentation and material updates for 2017 was also included.

Four additional courses were completed by veteran and NTP FIs in 2017. Refer to Section 4.5.2.3 for descriptions of these courses:

- IRB Training;
- Cybersecurity Awareness Training;
- CIPSEA Training; and
- Records Management Training.

4.7 Preparation for Field Data Collection

To prepare for data collection, a master list of needed supplies was developed. Using this list, all supplies were developed, ordered (if necessary), and stored for use in data collection activities throughout the survey year.

4.7.1 Assignment Materials

Veteran FIs were given assignment materials as each new quarter approached. These materials included a packet of segment materials (including the various maps and listing sheets for a segment) and lead letters. Letters were prepared and sent by the FIs prior to the time they

would be working a particular area. Before beginning a new quarter's work, FIs also transmitted to receive their new case assignments on their tablets.

FIs performing well at NTP training were given assignment materials for the cases assigned to them. The assignment materials consisted only of the segment materials packet. The FS mailed the lead letters so the FI could begin work immediately upon the successful completion of training. FIs also transmitted at the end of training to pick up their assigned cases on their tablets. FIs struggling during training were placed on probation, received no assignment, and were unable to work in the field until they adequately completed further training and passed a recertification. Any materials for segments not assigned to an FI were sent to the FSs for later assignment.

4.7.2 Bulk Supplies

Bulk supplies were shipped overnight directly to the homes of veteran FIs and new staff who successfully completed NTP training. During the year, FSs were responsible for requesting additional supplies for their FIs using a resupply order form on the CMS. Requested items were sent from the Field Distribution Center directly to the FIs needing supplies.

4.8 Website Development

Using the influence of the Internet to broaden communication, RTI staff continued to refine and enhance the two NSDUH websites.

4.8.1 Case Management System

The web-based CMS enhanced the ability of all levels of management to make informed decisions based on current field conditions. Each night, data were transmitted to RTI from the FIs' tablets and laptops for inclusion in the CMS. The next morning, each supervisor and manager had access to the results of the previous day's work and its effect on the totals for that quarter.

The CMS also contained many helpful tools such as the FI, FS, and RS Manuals; logs to enter new recruits and training information; links to other pertinent sites; project calendars; and other administrative tools.

Access to this secure website was tightly controlled with system-wide security provided through secure links to the network from each user's computer. A new security device, the YubiKey, was introduced in 2017 to support NSDUH's FIPS moderate requirements for two-factor authentication on in-field data collection laptops. The YubiKey acts as a USB security token that implements a secure challenge-response protocol. The YubiKey, in conjunction with secure passwords, provides tight two-factor security for NSDUH laptops.

4.8.2 NSDUH Respondent Website

An informative public NSDUH website was maintained. Visitors to the site could access a variety of topics such as project description, confidentiality, and frequently asked questions. Brief information was included about SAMHSA and RTI, with links to the websites of both organizations. Also included was a listing of various users of NSDUH data with links to those users' websites and news articles about NSDUH. Respondents could also access contact information for a NSDUH project representative via the website.

4.9 Maintaining NSDUH Equipment

Staff used an extensive inventory system to monitor the disbursement and location of all NSDUH equipment, including FI tablets and laptops; management laptops and printers; training projectors; and the many miscellaneous parts and cords. Technical assistance to the users of the equipment was an important and necessary task.

All field and management staff receiving NSDUH equipment acknowledged that they would not alter or add software unless directed by RTI staff to do so. Staff also indicated understanding the full and legal responsibility for taking reasonable and appropriate steps to safeguard equipment from damage, loss, or theft. All staff received training and had written manuals available explaining proper care and handling of the equipment and the consequences of repeated equipment problems.

If staff left the project, equipment was returned to Technical Support for check-in and maintenance. Detailed procedures were in place to recover any equipment not readily returned by former staff.

4.10 Challenges and Problems Encountered

Development of all NSDUH materials and the screening and interview programs required a tight schedule in order to complete all preparations on time. Implementing the YubiKey security device in 2017 required significant changes to manuals and training materials. A new process for periodically updating the software on the FI laptop computers was implemented in March 2017. This required the preparation and distribution of a new Appendix C for the FI Computer Manual. New training content was also created for the "FI Quarterly - Q2 2017" iLearning course and NTP Training Program to instruct FIs on the new processes. Thorough testing and tight scheduling were required for updating the manual and related training materials before implementing the processes on NSDUH.

Exhibit 4.1 2017 Screening Application Updates

2017 NATIONAL SURVEY ON DRUG USE AND HEALTH SCREENING APPLICATION UPDATES

The following updates were made to the 2017 NSDUH Screening Application:

- As necessary, dates were updated in the screening program.
- On the Call Distribution screen, revised the program to default to the selection "All ROC type records" instead of defaulting to "Screening records only."
- In the Select Case Screen Options, revised the program to display "CANNOT REOPEN CASE" as a pop-up for cases coded 22 (All Military).
- Revised the Edit Roster Record pop-up accessed from the Verify Roster Data screen to display the roster member age.
- Revised the Eligible Member pop-up accessed from the Members 12 or Older screen to remove an unnecessary repetition of the phrase "Confirm Response."

2017 NATIONAL SURVEY ON DRUG USE AND HEALTH CAI INSTRUMENT REVISIONS

Introduction

- Updated the CAI instrument version number.

Core Demographics

- Updated response options to ALL CAPS in QD 12 to be consistent with the formatting of other interviewer-administered response options.

Alcohol

- Edited the ALC30USE variable so that respondents who reported use of alcohol on 0 days in the past month are not asked to report misuse of prescription drugs with alcohol in the past 30 days.
- Moved ALC30USE from the Definitions for Use in Consumption of Alcohol module to the Alcohol module.

Pain Relievers Main Module

- Text used in PRANYOTH was added to PRYOTH to remind respondents not to include over-the-counter (OTC) medications.

Stimulants Main Module

- Text used in STANYOTH was added to STYOTH to remind respondents not to include OTC medications.

Sedatives Main Module

- Text used in SVANYOTH was added to SVYOTH to remind respondents not to include OTC medications.

Definitions for Use in the Drugs Module

- Corrected the definition of ALC12MON so that only respondents reporting drinking on more than 5 days in the past month on a previous consistency check item have ALC12MON set to a value of 3.

Exhibit 4.2 2017 CAI Changes (continued)

Health

- Edited the range of acceptable response options for the age at first diagnosis questions (HLTH27, HLTH28a–HLTH28cc, HLTH30, HLTH32–HLTH37, HLTH39, and HLTH41) to change the lower bound from 0 to 1 to match the instruction "If you were first diagnosed before you were 1 year old, please enter 1."

Definitions for Use in Consumption of Alcohol Module

- Deleted the ALC30USE definition from this module. Added a note that ALC30USE is now defined in the Alcohol module.

Education

- Added two new categorical follow-up questions, QD20DKRE and QD21DKRE, to collect data from those who respond DK or REF to QD20 and QD21, respectively.

Health Insurance

- Updated Medicaid and CHIP names (QHI02 and QHI02v, respectively) to reflect annual state program name changes. Acronyms for program names were removed from parentheses.

Income

- In QI01N, edited "persons" to "people" to be consistent with similar questions.
- Updated TANF names in QI08N to reflect annual state program name changes. Acronyms for program names were removed from parentheses.
- In the interview note in QI20N, QI21A, and QI21B, edited "persons" to "people" to be consistent with similar questions.

Verification

- Deleted brackets from interviewer instructions in TOALLR3I to be consistent with the formatting of other interviewer instructions. Rephrased the interviewer instruction to be more readable on screen.
- Added a reminder to THANKR2 for field interviewers to retrieve their YubiKey before leaving the selected dwelling unit.

CAI = computer-assisted interviewing; CHIP = Children's Health Insurance Program; DK = don't know; REF = refused; TANF = Temporary Assistance for Needy Families.

5. Field Staff Training

Training for all levels of project field staff occurred both prior to the start of data collection and throughout the year. Training programs for experienced staff focused on updates to project materials and procedures and on improving necessary skills. Training for newly hired staff covered the detailed steps necessary to properly conduct field work.

5.1 Management Training Programs

To prepare for the 2017 National Survey on Drug Use and Health (NSDUH), field management staff completed several web-based iLearning training courses in November and December 2016. The course details are provided in Section 4.6.2.3. The staff then attended a train-the-trainers (TTT) session to prepare for veteran field interviewer (FI) training and the 2017 NSDUH. The session was presented via videoconference during the week of November 13, 2016 (see Section 5.3.3, which describes the TTT session).

5.2 New-to-Project Field Interviewer Training Sessions

5.2.1 Design

Training sessions were held throughout the year to train new-to-project (NTP) FIs. These sessions helped maintain a sufficient staff size to complete screening and interviewing within the quarterly time frames. Sessions were held in late January, late March, late June, and early October, with multiple rooms staffed by teams of three trainers. A total of 205 new FIs completed training. All sessions took place in Durham, North Carolina. [Table 5.1](#) at the end of this chapter summarizes the FI training sessions conducted for the 2017 NSDUH, including specific training dates.

The NTP training program consisted of 7 days of training covering general techniques of interviewing, screening using the tablet, procedures for conducting NSDUH interviews on the laptop computer, general NSDUH protocols, and technical support. After returning home from training, FIs hired as bilingual FIs completed a "Bilingual Training" iLearning course and an individual mock screening and interview to review the Spanish translations of the interview questionnaire and screening program.

To provide consistency between training classrooms, a near-verbatim guide with 23 sections provided detailed instructions and text to ensure all necessary instructional points were covered. In addition to the guide and accompanying visual slide presentations, trainers also used videos with multiple segments throughout training, a workbook containing tablet and laptop exercises and printed examples, training segment materials used in exercises that replicated actual segment materials, the FI Manuals for reference, and the two computers (the tablet and the laptop) with accessory equipment.

All new FIs were required to pass an individually conducted certification in English to successfully complete training. Each FI had to demonstrate knowledge of NSDUH protocols by completing a straightforward screening and interview with an abbreviated version of the audio

computer-assisted self-interviewing (ACASI) questions. A trained certifier used a certification booklet containing all standardized steps and scripts to provide responses as the respondent and document any deviations from the text and NSDUH protocol. Certifiers included NSDUH field management staff; technical support representatives; and instrumentation, operations, data quality, and training program and field materials team members.

Of the 214 new FIs trained during 2017, 2 were placed on probation based on their overall performance during training. Additionally, one FI was terminated for failing the certification process, and eight FIs were released during training because of their inability to meet training expectations.

5.2.2 Staffing

At each training site, staff included a site leader, a logistical assistant, a lead technician, a certification coordinator, and one or more training teams. Each of these roles was well defined to ensure that training progressed smoothly.

The site leader coordinated all FI registration activities, hotel relations, and logistics; and monitored FIs and trainers. The site leader's specific tasks included

- overseeing the registration and fingerprinting process of new FIs;
- coordinating all services provided by the hotel with the assigned hotel representative;
- managing the trainers and training rooms;
- evaluating FI performance and working with trainers to resolve problems with FIs, including probation or termination when necessary;
- reporting the status of training to management and supervisory staff each evening (see [Exhibit 5.1](#) for an example summary evaluation report);
- supervising the certification process and making final decisions about the status of any FIs failing ; and
- informing trainers about resolutions to any questions, problems, or suggestions following consultation with appropriate project staff.

The site leader role was filled by various experienced NSDUH staff including regional supervisors (RSs) and members of the training program and field materials teams.

The logistical assistant worked closely with the site leader throughout training to ensure all FIs were registered properly, all training rooms had all necessary supplies, and hotel services functioned smoothly.

The lead technician served as the point of contact for technical issues, including the proper functioning of all equipment and programs. Other duties included supervising training equipment setup and distributing FI computer equipment.

The certification coordinator managed the certification process, including establishing appointment schedules, monitoring and distributing certification supplies and materials, and reporting the results to the site leader. A local NSDUH staff member served as certification coordinator.

Each classroom was taught by a training team consisting of a lead trainer, an assistant trainer, and a technical support representative. The trainers divided the responsibility for presenting the sections of the training. The lead trainer was responsible for the logistics and schedule of the training room. In general, one trainer would train from the front of the room while the other trainer(s) would monitor FI progress, assist FIs with questions, and operate the computer equipment.

The technical support representatives trained FIs on the equipment-related sections and other sections depending on their experience level. The technical support representatives also prepared and set up the computers for each FI; ensured the proper functioning of the tablet, laptop, and projection equipment used for the training presentation; and provided in-class technical help.

Training teams were selected based on availability and experience. The lead trainer was usually an RS with considerable training experience or an experienced training program and field materials, operations, data quality, or instrumentation team member. Assistant trainers were usually field supervisors (FSs) or less experienced members of these same teams.

5.2.3 Content of New-to-Project Field Interviewer Training Sessions

5.2.3.1 Day 1

After completing the registration process the evening before, training classes began with an introduction to the history and scope of NSDUH presented in a video featuring the RTI International project director. FIs also became familiar with the importance and organization of the project via a video titled "Focus on NSDUH." Next, FIs reviewed the FI job description and responsibilities. FIs completed an introductory computer session with instruction in using the laptop computer hardware and YubiKey and the basics of the tablet hardware and software, but not the actual screening program. Care and maintenance of the computer equipment was also discussed. FIs learned how to contact selected households and the importance of being knowledgeable about the study. They also discussed professional ethics and respondents' rights. FIs reviewed supplementary materials and practiced making effective introductions and

answering respondent questions. At the end of the day, FIs discussed their experiences with iLearning, a multimedia, interactive training application. FIs received a packet with worksheets for tracking their training hours and travel time and expenses. FIs also completed the Data Collection Agreement signature and notarization process.

5.2.3.2 Day 2

Day 2 included a general introduction to survey sampling and counting and listing, followed by an in-depth discussion of how to locate segments and selected dwelling units (DUs). Trainers then introduced the screening process using a video of a mock screening. Following a trainer demonstration, each FI had the opportunity to operate the tablet during a group walk-through screening exercise. Discussions on quality control, record of calls, and screening and interviewing result codes were also included. FIs practiced with the tablet during two group walk-through screening exercises and learned about refusal codes and refusal reports. The training day ended with small group screening exercises conducted with a trainer. All FIs were invited to attend an evening field interviewer lab (FI Lab) for additional practice.

5.2.3.3 Day 3

On Day 3, FIs focused on gaining experience and confidence by conducting individual and paired mock screening exercises on the tablet. Next, trainers reviewed the functions of the computer-assisted interviewing (CAI) manager program on the laptop, including how to access the FI Manual on the laptop. FIs were then introduced to the NSDUH interview and the basics of good field interviewing techniques. A video of a mock interview provided an overview of the process. A video demonstrating the steps to properly obtain parental permission for selected youth respondents was shown as well. This was followed by discussions on bias, probing, and the importance of following conventions. FIs then practiced transitioning from the screening to the interview with a partner. At the end of the day, trainers reviewed persuasion principles and ways to improve communication skills, and FIs practiced answering respondent questions. All FIs were again invited to attend an evening FI Lab for additional practice.

5.2.3.4 Day 4

On Day 4, FIs learned the details of the NSDUH interview with a round-robin read-through of the entire questionnaire and a walk-through of the end-of-interview procedures. Next, FIs completed a youth individual practice interview exercise that allowed them to review both the format and questions in the CAI program at their own pace. The class then reviewed tips for working successfully, such as being organized and working efficiently, followed by several exercises to further practice answering respondent questions and gaining participation. Last, FIs provided feedback on the training session by completing a brief evaluation at the end of Day 4. Interested FIs could attend an FI Lab in the evening.

5.2.3.5 Day 5

To begin Day 5, FIs learned about data transmission procedures and completed a successful transmission from the tablet and the laptop. For the March, June, and October sessions, FIs were introduced to the laptop update process. All FIs reviewed steps to correct the most common technical problems and procedures for contacting technical support for additional

help. The class then began a series of paired mock exercises encompassing the entire screening and interviewing process, so FIs could practice the transition from the screening on the tablet to the interview on the laptop. After the mock exercises, the trainer conducted a group review. Classes then discussed the important topic of dealing with reluctant respondents and overcoming other difficult situations. This session included informative video segments and group exercises. All FIs were given the option of attending an evening FI Lab. FIs who were performing well could attempt the certification process on the evening of Day 5.

5.2.3.6 Day 6

Training on Day 6 began with a review of screening a group quarters unit, followed by details on checking for and adding missed DUs. Next, trainers covered using the messaging system available on the tablet, how to access reference materials including two videos for use with potential respondents, and several programs for organization and planning purposes. Trainers also covered less common screening topics, including editing addresses, placing cases on hold, and re-opening cases. Next, administrative procedures were reviewed. Later, FIs had the opportunity to complete another series of paired mock exercises to further practice the entire screening and interviewing process. At the end of the mock exercises, the trainer conducted a group review. Certifications and an FI Lab were scheduled for the evening of Day 6.

5.2.3.7 Day 7

Any remaining certification appointments took place the morning of Day 7. After the morning break, classes resumed with a discussion on maximizing data quality in research. Emphasis was placed on following procedures, controlling quality, and FI responsibilities. This section included a video showing the Study Results from 2015. Then proper documentation and reporting were discussed. A brief recap of the entire screening and interviewing process helped FIs review how all the tasks fit together. FIs then completed a final evaluation to provide feedback on the completed training session.

5.2.4 New-to-Project Bilingual Training

Following training, bilingual FIs completed a "Bilingual Training" iLearning course on the Spanish-language NSDUH materials and questionnaires. This course reviewed the Spanish versions of the tablet screening program, NSDUH interview questionnaire, and other 2017 supplemental materials, as well as the differences from the English versions. Only those FIs who had been hired as bilingual FIs completed this iLearning course. Bilingual FIs also completed an individual screening and interview exercise to review the Spanish version of the questionnaires in detail. After confirming completion of the iLearning course, FSs contacted bilingual FIs to discuss their results and answer any questions about the exercise. Bilingual FIs who successfully completed the course were deemed RTI-Certified and, as such, are the only FIs allowed to conduct NSDUH screenings and interviews in Spanish.

5.2.5 Mentoring of New-to-Project Graduates

After completing the NTP training program, all graduates were mentored in the field by an experienced FI, their FS, or another FS. Mentoring of all new FIs was required and usually occurred within a week following the conclusion of training, preferably during the graduate's

first trip to the field.

Mentors were given standardized instructions (see [Exhibit 5.2](#)) to ensure that all important protocols learned during training were reinforced.

5.2.6 New-to-Project Post-Training iLearning

Graduates of the January, March, and June NTP training sessions were required to complete three additional iLearning courses after 1 month in the field—"Using Your Segment Materials," "Challenging Field Situations," and "NSDUH FI Essentials." October NTP graduates did not complete these courses and instead focused their efforts on preparing for the 2018 Veteran FI Training session.

All NTP FIs completed the Records Management Training course after returning home from training. March, June, and October NTP FIs also completed the Cybersecurity Awareness Training course after returning home.

Before the start of Quarters 2 and 3 in 2017, NTP FIs also completed the "FI Quarterly" iLearning course as described in Section 5.5.

Refer to [Tables 5.2](#) and [5.4](#) for the results of these courses.

5.3 Veteran Field Interviewer Training Sessions

5.3.1 Design

To prepare the FIs chosen to continue working from the 2016 NSDUH into 2017, the veteran FI training program consisted of at-home and in-person components. For the at-home tasks, FIs completed several iLearning courses (see [Table 5.3](#) for the results of these courses and Section 4.6.2.3 for course descriptions) in November and December 2016. FIs successfully completing these courses attended a 2-day in-person training session held in January 2017 at one of three regional sites.

In-person training sessions were held in early January with consecutive A and B sessions. Later in February, March, May, and June 2017, four make-up trainings were held to train veteran FIs unable to attend their assigned in-person session. [Table 5.1](#) summarizes the FI training sessions conducted for the 2017 NSDUH, including specific training locations and dates.

To provide consistency among classrooms, sessions, and sites, a training guide with 11 sections provided detailed instructions and text to ensure that all necessary instructional points were covered.

The 2-day training session provided instruction and practice with the 2017 instruments, protocols, materials, and equipment. The FS team meeting portions of the session covered region-specific topics, such as FS management topics, team-specific topics, and team-building activities. Veteran FIs completed a certification process and attended several workshops on the second day of training. Workshops provided an open discussion environment for FIs to collaborate with staff from other teams in the region and included topics on improving interactions with respondents and being successful while working in the field. All RTI-Certified bilingual FIs attended a special training session on the 2017 Spanish materials and instruments.

All veteran FIs were required to pass an individually conducted certification in English to successfully complete training and continue working on NSDUH. Each FI had to demonstrate knowledge of the NSDUH protocols by completing a straightforward screening and interview with an abbreviated version of the ACASI questions. A trained certifier used a certification booklet to provide standardized responses and to document adherence to procedures, noting any deviations from the text and NSDUH protocol.

These experienced FIs had one opportunity to complete certification at training and were not provided feedback or retraining by the certifier.

Four of the 559 veteran FIs trained during 2017 failed their certification and received a verbal warning.

[Table 5.5](#) summarizes the 2017 veteran FI certification results.

5.3.2 Staffing

Each training site was led by a site management team consisting of a site leader, a senior certification coordinator, a certification coordinator assistant, a lead technician, and an observer. Members of the team had defined roles yet worked closely together to ensure that training progressed smoothly.

Site leader responsibilities included logistical tasks such as hotel communication and resolution of any issues, daily site reports, and FI registration. Other site leader tasks included overseeing classrooms and FI Labs, leading debriefing meetings, and communicating with Headway about FIs. NSDUH senior management staff filled the site leader role.

The observer, a role also filled by NSDUH senior management staff, provided general oversight of training by supporting the site leader and the site management team.

The lead technician served as the point of contact for technical issues including the proper functioning and updating of computer equipment and programs. Other duties included supervising training room equipment setup, providing training room support, and working with hotel staff to manage Internet access and other technical details.

The senior certification coordinator managed the certification process, including establishing appointment schedules, organizing and distributing certification materials, scoring completed certifications, and preparing the results letters. This person also worked closely with the site leader to ensure that training and hotel operations functioned smoothly. Training program and field materials team members served in this role.

The certification coordinator assistant, a role filled by training program and field materials or instrumentation team members, worked with the senior certification coordinator to score completed certifications and prepare the results letters.

Each classroom was taught by a training team consisting of two FSs and an RTI trainer. One FS's staff attended Session A and the other FS's staff attended Session B. The RTI trainer was an RS or a training program and field materials, operations, data quality, instrumentation, or technical support team member. The RTI trainer handled reporting and logistical issues for the training team. The three trainers divided the responsibility for presenting the training guide sections. In general, one trainer would present from the front of the room while the others would monitor FI progress and help answer FI questions.

The workshops held on the morning of Day 2 were led by experienced field staff, while language specialists familiar with NSDUH led the bilingual training session.

5.3.3 Train-the-Trainers

To prepare FSs and trainers for their training roles and to instruct all project staff in the changes for the 2017 survey, staff participated in a TTT session via an online videoconferencing program. Organized by veteran FI training location, several sessions of 8 to 10 trainers were held for each site during the week of November 13, 2016. A separate session for technical support team members across all sites was held in person on November 29, 2016. All sessions were led by members of the training program and field materials team who reviewed all portions of the veteran training guide and materials, as well as logistics for the January sessions.

5.3.4 Content of Veteran Field Interviewer Training Sessions

5.3.4.1 Day 1

Day 1 began with a large group welcome presented by the site leader or observer to introduce staff and set expectations for training. A staff member from the Substance Abuse and Mental Health Services Administration (SAMHSA) shared some key NSDUH findings during this session. Next, in their classrooms, the FSs welcomed FIs and covered key topics including FS expectations, the importance of NSDUH, and various data quality topics. FIs then completed exercises in pairs to practice properly administering the 2017 NSDUH screening. Trainers observed the pairs and provided feedback to FIs. After a group review of the screening exercises, FIs completed paired interview exercises with trainers observing and providing feedback as the

FIs worked. A group review of any issues noted during the interview exercises was conducted, then trainers led FIs in discussions and exercises using the various case management tools available in the NSDUH screening program on the FI tablet. For the remainder of the training day, the FS whose team was attending led the first portion of their team meeting. That evening, FIs were invited to attend an FI Lab for additional practice. Trainers were available to provide support and answer questions.

5.3.4.2 Day 2

During the morning of Day 2, certifications of all FIs were conducted. When not being certified, FIs chose two of three interactive workshops to attend. The workshops encouraged FI participation when discussing topics such as improving interactions at the door with respondents, the importance of staying positive and recovering from refusals, and sharing tips for success. RTI-Certified bilingual FIs attended a special training session during the first workshop period to review changes to the Spanish translations of the instruments and materials and to discuss challenges FIs face when working with Spanish-speaking populations. Later, the FS conducted the remainder of the team meeting with his or her staff, and certification results letters were distributed before dismissal.

5.3.5 Special Veteran Training Sessions

Four make-up training sessions were held in the Research Triangle Park, North Carolina, area in February, March, May, and June 2017 to accommodate those veteran FIs unable to attend the early January sessions. Training program and field materials, operations, data quality, instrumentation, and technical support team members served as the trainers and certifiers for these sessions. [Table 5.1](#) lists specifics about each session, and [Table 5.5](#) includes certification results for these make-up sessions.

5.4 Ongoing Training

Throughout the year, RS and FS teams held meetings to provide training and open discussion on topics such as team performance, data quality, refusal avoidance, refusal conversion, and efficiently working case assignments. To reduce costs, these meetings were held via conference call or an online videoconferencing program.

5.5 Periodic Evaluations

Periodic evaluations of FI knowledge were conducted using iLearning courses delivered via Mindflash, an online training software and management service. Before the start of Quarters 2 and 3 in 2017, FIs completed the "FI Quarterly" iLearning course, which reviewed key project procedures and protocols. Because of the various courses FIs were required to complete at the end of the year, FIs did not complete an "FI Quarterly" course in Quarter 4 of 2017.

The "FI Quarterly" course contained content and assessment questions that varied each quarter to test FI knowledge of NSDUH protocols. FIs were required to successfully complete the course by the specified deadline. To pass the course, FIs had to score at least 80 percent on the assessment portion. FIs not achieving a passing score were required to complete retraining

with their FS before beginning work the next quarter. See [Table 5.4](#) for the results of the "FI Quarterly" iLearning course.

5.6 Problems Encountered

Leading the training sessions held throughout the year required involvement of project staff with other NSDUH responsibilities. These dedicated staff trained each day and then completed their other project duties in the evenings. The demands on trainer time were increased on evenings when they had to staff FI Labs or conduct certifications. Training planners tried to rotate staff across the various training assignments throughout the year to avoid overloading any one individual while also asking experienced local NSDUH staff to assist with FI Lab or certifications. This approach worked well. Planning for the 2017 Veteran FI Training sessions also required extensive involvement of project staff with other ongoing NSDUH responsibilities to establish contracts and coordinate logistics with the different training locations. Staff worked diligently to ensure that the contracts and detailed training arrangements were in place in time for the January 2017 in-person training sessions.

Table 5.1 2017 NSDUH FI Training Programs

Month	FI Training Sessions <i>Date and Location</i>	FIs Trained	Cumulative Number of FIs Trained	Attrited FIs	Cumulative Number of Attrited FIs
January	<i>Veteran Training Sessions</i> Dates: <i>Session A</i> : 1/4–1/5 <i>Session B</i> : 1/6–1/7 Locations: Los Angeles (CA), St. Louis (MO), and Raleigh (NC)	543	543	7	7
	<i>New-to-Project Training Session</i> Dates: 1/20–1/26 Location: Durham (NC)	43	586		
February	<i>Make-Up Veteran Training Session</i> Date: 2/6 Location: Research Triangle Park (NC)	11	597	22	29

6. Data Collection

This chapter presents the basic data collection procedures followed by field staff working on the 2017 National Survey on Drug Use and Health (NSDUH). For further details or specific instructions, consult the 2017 NSDUH Field Interviewer Manual.

6.1 Contacting Dwelling Units

Field interviewers (FIs) were assigned specific sample dwelling units (SDUs) to contact, with the addresses or unit and location descriptions displayed on the tablet. The sample was released in partitions, with additional units made available as needed, depending on progress made during the initial weeks of data collection each quarter.

6.1.1 Lead Letter

Initial contact with residents of the specific SDUs was made through a lead letter that gave a brief explanation of the nature of the study and its methods. The letter was printed in color on U.S. Department of Health and Human Services (DHHS) letterhead and signed by both the Substance Abuse and Mental Health Services Administration (SAMHSA) National Study Director and the RTI International National Field Director.

For all housing units with a complete address (i.e., not a location description), letters preprinted with the addresses were included with the assignment materials distributed to FIs each quarter. FIs reviewed all addresses to check that they could be mailed, signed the letters, and mailed them via first class mail prior to and throughout the first part of the quarter, so the letters arrived fairly close to the time the FI expected to be in the area. Group quarters units and any housing units lacking a complete mailing address were not sent a letter. To allow for these cases and other instances of delivery problems, each FI had additional letters to give to respondents during a personal visit.

6.1.2 Initial Approach

Before knocking on the door of an SDU, the FI selected the appropriate case for that specific unit on the tablet. Each FI possessed a personalized letter of authorization printed on SAMHSA/DHHS letterhead authorizing him or her to work on the study and approached the door of the SDU with his or her RTI identification badge clearly visible. The FI also carried a variety of informative materials such as Question and Answer Brochures, NSDUH Highlights, and copies of news articles about NSDUH.

6.1.3 Introduction, Study Description, and Informed Consent

When contacting the SDU, the FI asked to speak with an adult resident (18 or older) of the unit who could serve as the screening respondent. The FI introduced himself or herself and the study. As scripted on the tablet, the FI mentioned the lead letter and, on the Informed Consent screen, read the informed consent text to the screening respondent and gave him or her a copy of the Study Description. The Study Description explained the purpose and sponsor of the

data collection effort, assured the respondent that all information gathered would be handled in the strictest confidence, and estimated the time required to complete the screening and interview. The Study Description also stated that respondents were free to withdraw from the study at any time. Providing the Study Description and reading the scripted informed consent text from the tablet fulfilled all required aspects of Informed Consent for the screening portion of the study.

6.1.4 Callbacks

If no respondent was available or another situation was found at the unit so that screening could not be completed during the first visit, a minimum of four callbacks were made, so each SDU was visited at least five times in an effort to complete the screening. These contacts were made at different hours on different days of the week to increase the likelihood of completing the screening. The only exception to this protocol was in case of adamant refusals. Refer to Section 6.7 for details on refusal conversion procedures.

Screening cases that had received the initial visit plus at least four callback attempts were eligible for finalization with no additional fieldwork. However, before finalizing a case, field supervisors (FSs) reviewed the tablet Record of Calls (ROC) of pending screenings to ensure each case had been given ample opportunity to be completed. If feasible and cost-effective, additional callbacks were made to SDUs that were not visited at different times on certain days. If the screening was not completed during these additional contacts, then the case was assigned a final code.

6.2 Dwelling Unit Screening

Screening was performed at each SDU by obtaining information about the residents of the unit to determine whether any household member would be eligible for the NSDUH interview based on the ages of the SDU members. The screening program guided the FIs through the process of asking age, gender, race/ethnicity, and military status for all individuals aged 12 or older who lived at the unit for most of the calendar quarter, and the information was entered into the tablet.

6.3 Within-Dwelling Unit Selection

Once the roster information was entered and verified, the FI started the within-dwelling unit selection algorithm on the tablet. The tablet automatically determined, based on the composition of the household roster, whether or not anyone in the unit was selected for the interview.

The algorithm allowed for the selection of zero, one, or two members of a household for an interview. To identify each selected individual, the tablet displayed the person's roster number (based on the order in which household members were listed), the age, gender, race/ethnicity, and either the relationship to the householder (for housing units) or a first name (for group quarters units). Also listed on the tablet was a QuestID number, which was required to start the interview on the laptop. FIs transmitted all completed screening data on the tablet to RTI each evening.

6.4 Interview Administration

6.4.1 Informed Consent and Getting Started

Once the selected individual(s) was identified during screening, the FI asked to complete the interview(s) during that visit. If this was not convenient for the respondent, the FI entered information about possible times for future contacts in the tablet ROC. A minimum of four visits were made at different times of day on different days of the week in an attempt to complete the interview.

For adults selected for the NSDUH interview, the FI read the Introduction and Informed Consent for Interview Respondents Age 18+ script from the Showcard Booklet to introduce the study, describe the interview process and procedures to be followed, and detail the number of people each respondent represented. Along with reading the Informed Consent script, the Study Description was also provided (if not provided earlier during screening) to meet the Informed Consent requirements for the interview. After receiving consent, the FI began the interview in a private location.

If the selected individual was aged 12 to 17, the FI was responsible for obtaining verbal permission from a parent or guardian to speak to the youth about the study by using a standardized script on the tablet. The FI then provided the youth with a basic overview of the study and the interview process. If the youth was interested, the FI proceeded with the parental informed consent procedures described below before interviewing the youth. The only exceptions to this rule were in certain group quarters situations, like dormitories, and other SDUs where consent was unobtainable because a youth was living independently without a parent or guardian residing in the home. This exception only applied to 17-year-olds living independently. For all youths aged 16 years or younger, parental permission was required with no exceptions.

In the Showcard Booklet, separate text for parents and guardians was included in the Introduction and Informed Consent for Interview Respondents Age 12-17 script. Once parental permission was obtained by reading the parent portion of the Introduction and Informed Consent script, the FI confirmed with the parent or guardian that an adult would be present in the home for the duration of the interview with the youth. Next, the FI approached the youth and read the Introduction and Informed Consent script to introduce the study, describe the interview process and procedures to be followed, and detail the number of youths each respondent represented. The FI also provided a copy of the Study Description to fulfill all required aspects of Informed Consent. After obtaining the youth's consent to participate, the FI then asked the parent to leave the interview setting to ensure the confidentiality of the youth's responses. The FI then began the interview.

6.4.2 Computer-Assisted Interviews

The NSDUH interview began in the computer-assisted personal interviewing (CAPI) mode, with the FI reading the questions from the computer screen and entering the respondent's replies into the computer. Following scripted text on the computer, the FI explained to the respondent how to use the computer for the audio computer-assisted self-interviewing (ACASI) sections. Utilizing ACASI methodology for the sensitive substance use and nonuse questions

enhanced privacy since the respondent listened to the prerecorded questions through the headphones and entered their responses directly into the computer. Beginning with a practice session, which introduced the various computer keys used during the interview, the respondent then proceeded through the interview. When the respondent was finished with the ACASI portion, the FI once again took charge of the computer, asking additional demographic questions as well as health care, insurance, and income questions. During both the beginning and ending CAPI portions, showcards were utilized to assist respondents in answering the questions.

The average computer-assisted interviewing (CAI) administration times are provided in [Tables 6.1](#) through [6.35](#) at the end of this chapter for the overall survey and for the various sections of the NSDUH interview by respondent age (youths aged 12 to 17 or adults aged 18 or older) and survey year (2015, 2016, and 2017). These timing tables were calculated using audit trail data, which records responses and the time spent on each item. Cases with extreme values for the overall time (less than 30 minutes or more than 240 minutes) are excluded from the tables.

Please note that the total number of interviews included varies between tables due to interview skip patterns and excluded and missing timing data. Also note that variations in the questionnaire content between the survey years (e.g., questions added or deleted) may affect the comparability of some timing statistics.

6.4.3 End of Interview Procedures

After the last interview question, the interview process involved several final steps. FIs had to:

- prepare the Quality Control Form and ask the respondent to complete the remaining items on the form;
- have the respondent seal the completed Quality Control Form in a postage-paid envelope addressed to RTI;
- give the respondent the \$30 cash incentive;
- prepare the Interview Incentive Receipt, giving the appropriate copy to the respondent;
- provide the adult respondent or parent or guardian of a youth respondent with a Question and Answer Brochure if not provided earlier;
- gather all interview equipment and materials;
- thank the respondent;
- enter the final result code in the tablet; and
- complete the FI Observation Questions on the tablet.

Each week, FIs sent all completed Interview Incentive Receipts to his or her FS. FIs mailed sealed Quality Control Form envelopes to RTI within 24 hours of completing the interview. Each night FIs transmitted interview data to RTI.

6.5 Data Collection Management

Management of the NSDUH data collection effort was characterized by frequent, substantive communication within and between the various functional levels. For instance, the following project management meetings were conducted via teleconference:

- FIs throughout the country reported to their FS at least once each week to discuss production, problems encountered and possible resolutions, feedback on past work, plans for the next week, and any administrative issues.
- FSs reported to their regional supervisor (RS) weekly, discussing production, costs (including cost containment issues), goals, staffing, and other administrative issues.
- Each RS held biweekly group calls with their team of FSs to share news and goals for the region and to encourage discussion and sharing of ideas.
- Each regional director (RD) held a weekly meeting with his or her RSs to share project news and goals while addressing any problems within the region. If a particular topic needed special attention during the year, the RDs conducted group calls with all their RSs and FSs.
- RDs met biweekly with the National Field Director, the associate project director, and the project director.
- All directors and other key management staff met weekly with SAMHSA representatives.

Although the more formal meetings were held biweekly, staff communicated constantly through the use of e-mail and by phone. This increased awareness of project issues by effectively passing information through the various management levels. The capability to send and receive messages from FIs using a messaging program on their tablet allowed for timely sharing of information with all field staff.

With the web-based project Case Management System (CMS), all management staff had access to a tremendous amount of information on the status of events in the field. Additional details on the CMS are provided in Section 8.3.

6.6 Controlled Access Procedures

At times during the data collection process, FIs had difficulty gaining access to particular SDUs. FIs confronted with challenging circumstances were instructed to be observant, resourceful, and keep their supervisors informed of the situation. Additional suggestions taken from FS experience or from the "Guide to Controlled Access Situations" were discussed. Conversations with managers and owners generally centered on the importance of the study, SAMHSA and RTI's emphasis on confidentiality, and an individual's right to make a personal decision about participation. Supervisors sometimes contacted property managers and owners directly to answer questions or concerns.

Due to prior efforts by staff who listed the dwelling units, many access problems were resolved readily. Listers recorded contact information and other steps followed to secure access

so that FIs could follow the same strategies or build on already-established relations. Supervisors at the listing stage used special reports on the CMS to monitor access situations; supervisors for screening and interviewing used the same reports and recorded additional information to update the reports.

A Doorperson Letter and Doorperson Card were available to FIs to use during their work in the field. FIs carried this letter and card to support or supplement conversations with doorpersons, guards, and building representatives. The letter and card were not used with other individuals or respondents.

For continuing problems, RTI had a system to generate individualized letters and packets of information about the project. When required, FSs provided information to RSs, who then requested the packets. Upon receiving the request, specialists prepared a cover letter and assembled materials to fit the situation. The packet was sent via overnight express delivery to increase the importance placed on the contents and ensure timely delivery. For situations involving university or military housing, an Institutional Review Board summary was included.

A Law Enforcement packet could be sent to local police departments or other government agencies prior to starting data collection or after receiving a request for more information from a law enforcement official. This packet informed local law enforcement about the NSDUH and encouraged cooperation and the dissemination of information about the study to appropriate personnel. Similar to other individualized packets, it included an informative letter addressed to an appropriate recipient, a brief description of the materials included in the packet, and other NSDUH field materials.

For persistent problem situations not resolved through FS and FI efforts or the individualized letters and packets, 11,222 "Call Me" letters were sent to the SDUs. Special care was taken to ensure that calls resulting from the letters were directed to the authorized RS or FS to set up an appointment so the FI could return and complete the screening.

Occasionally, controlled access problems required assistance beyond the RS level, so RDs—and sometimes the National Field Director—became involved.

6.7 Refusal Conversion Procedures

More often than desired, potential respondents exercised their "right to refuse to participate." The following were in place to try to prevent refusal situations:

- All aspects of NSDUH were designed to exude professionalism and thus enhance the legitimacy of the project. All materials provided to the public were developed carefully. FIs were instructed to always behave professionally and courteously.
- The 2017 NSDUH Field Interviewer Manual gave specific instructions to FIs for introducing both themselves and the study. Additionally, an entire chapter discussed "Obtaining Participation" and listed the tools available to field staff along with tips for answering questions and overcoming objections.

- During new-to-project FI training, two sections of the guide covered details for contacting dwelling units and how to deal with reluctant respondents and difficult situations. During exercises and mock interviews, trainees were able to practice answering questions and using letters and handouts to obtain cooperation.
- During veteran FI training, time was spent reviewing various techniques for overcoming refusals. FIs participated in group discussions on completing screenings and interviews in different types of challenging refusal situations and shared tips on avoiding and converting refusals in those situations. The exercises and ideas presented helped the FIs improve their skills and thus increase their confidence and ability to handle the many situations encountered in the field.

In refusal situations, staff followed these steps:

- Detailed notes describing the situation were recorded in a Refusal Report on the tablet. FIs selected the main reason for the refusal from the following categories:
 - Too busy / no time / did too many already
 - Surveys / government invasive / teen exposure
 - Clarify confidentiality, legitimacy, selection
 - "Nothing in it for me" / uncooperative
 - Gatekeeper / parent / HH member disallow
 - Welfare / INS / ICE / USCIS concerns
 - Too ill / house messy / not dressed
 - Need to discuss with FS
- After data transmission from the tablet to RTI, the refusal category and any notes were available to the FS on the CMS. The FI and FS could then discuss the situation, with the FS suggesting additional tactics if necessary.
- Once the refusal situation was discussed, a refusal conversion letter was sent (if appropriate). On the CMS, the FS selected a specific letter based on the stage of the case (screening or interviewing), the category of the reason for the refusal, and, for interviewing, the person to be addressed (the actual respondent or the parent of a selected youth). The FS could also delete the request for the letter (in situations where a letter would not be helpful or could not be delivered) or release the letter for automatic production and mailing. During 2017, 51,525 refusal conversion letters were mailed.
- Supervisors were available to discuss the importance of participation with reluctant respondents.
- The FI returned to the SDU to try again with other tactics, except in the case of adamant or hostile refusals. If the FS determined a case was an adamant refusal based on discussions with the FI, the FS could choose to close the case without additional visits or transfer it to a different FI.

6.8 Problems Encountered

6.8.1 Size and Scope of the Project

By selecting areas throughout the entire country, many different types of situations arose that had to be resolved. With the large staff required by the size of the project, communication was vitally important, yet it was challenging to ensure that tips and suggestions were consistently conveyed to all staff.

6.8.2 Interviewing Staff Turnover

The continual turnover of interviewing staff meant there were not always enough FIs to adequately cover the assignments in all areas. Once replacement staff were in place, FSs needed to spend time mentoring these new FIs rather than focusing their attention on dealing with challenging cases. FSs spend a considerable amount of time dealing with staffing issues (recruiting, hiring, mentoring new FIs, supervising new FIs more intensely, implementing disciplinary actions with staff not meeting expectations, etc.), which ultimately taps into the amount of time they can allocate to managing the more difficult cases in their regions.

6.8.3 Refusals

Refusals at the screening and interviewing level have historically been a problem for NSDUH (as is common with many other national-level household surveys). In 2017, the National Field Director sent an e-mail to FIs containing the most frequently recorded issues faced when a respondent refused to participate. The e-mail informed FIs of common issues in their regions and helped FIs consider refusal conversion and aversion strategies. Reasons for refusal included

- respondents felt they were too busy and did not have time to participate;
- respondents felt they had already been inundated with market research and other survey requests;
- increased concern about providing personal information due to raised awareness of identity theft and hacking or leaks of government and corporate data; and
- concerns about privacy and increased anti-government sentiment, including among immigrant populations, led to a larger portion of respondent refusals.

6.8.4 Typical Data Collection Concerns

As is common in any large field data collection effort, staff encountered problems such as respondent availability, dwelling unit access (controlled or otherwise restricted, particularly barriers such as fences, gates, or locked doors and/or "No Trespassing" signs), and high-crime neighborhoods.

6.8.5 Adverse Weather

Throughout the year, many regions across the nation experienced extreme weather conditions, which made travel difficult and created data collection challenges. To minimize the impact of these weather situations, field management implemented several strategies in order to complete field activities successfully once weather conditions improved. These strategies included encouraging FIs to work additional hours, using traveling FIs and, in some areas, keeping screening cases open beyond the targeted deadline dates to improve screening response rates.

In Quarters 3 and 4, Hurricanes Harvey and Irma significantly affected data collection activities in certain areas in Florida and Texas. Field management staff closely monitored conditions in these states. Special guidelines were established to ensure that respondents living in areas affected by the hurricanes had an equal chance of being selected for NSDUH. The main change from normal data collection procedures was to have FIs attempt to contact SDUs that were inaccessible, destroyed, or uninhabited because of one of the hurricanes, once early in the quarter and once mid-quarter. FIs were instructed to look out for non-listed dwelling units that could be temporary dwelling units for residents displaced by the hurricanes. In addition, FIs were reminded to follow normal screening procedures by including in the SDU roster any temporarily displaced resident living in an SDU if the person had been staying in the temporary location for more than half the quarter.

6.8.6 Patches

No tablet or CAI patches were released during the 2017 data collection period.

6.8.7 Sample Design Concerns

The sample design for the 2017 NSDUH resulted in a higher than average yield of interviews in some areas. FSs for those areas experienced some challenges in balancing screening and interview work among FIs. The large size of state sampling regions increased the distance between sampled segments, requiring more FI travel assignments to complete the work. In addition, many FIs worked late into the quarter, resulting in fewer experienced staff available to participate in cleanup activities and conversion efforts.

Controlled access situations could also negatively affect response rates. For example, if staff were unsuccessful in gaining access to a secured building or gated community and additional lines were later released in that same location, those additional lines could not be worked, which ultimately impacted response rates. Although staff continued efforts throughout the quarter to gain access to these SDUs using the controlled access procedures mentioned in Section 6.6, they were not always successful.

The sample selection also included a high percentage of respondents aged 26 or older. Traditionally, gaining cooperation from respondents in this age group has been more challenging than with younger respondents. To help improve response rates with this population, supervisors followed the steps for refusal conversion referenced in Section 6.7.

CAI = computer-assisted interviewing.

Note: Time recording in 2016 and 2017 began at FIIDCON in the Introduction and stopped recording after QD12 in the Core Demographics Module. The 2015 timing data for this section does not include QD07 and QD08, which were moved in the Education and Employment Module of the 2015 survey. These questions were moved back to the Core Demographics Module for the 2016 survey.

CAI = computer-assisted interviewing.

Note: Time recording in 2016 and 2017 began at INTROINC and stopped recording after CELL1 in the Income Module. In 2015, CELL1 was asked before CELL2. Time recording in 2015 began at INTROINC and stopped recording after CELL2 in the Income Module.

7. Data Collection Results

7.1 Overview

By following the data collection procedures already discussed, 217,756 dwelling units (DUs) were selected. As shown in [Table 7.1](#), 184,266 units were identified as eligible during the screening process. Eligible units could not be vacant or occupied only by active-duty military personnel, and had to meet other similar criteria detailed in Section 7.2. From this number of eligible cases, 138,061 were then screened successfully. The selection procedure in the tablet yielded 97,667 eligible household members. From this number, a total of 68,032 interviews were then completed.

7.2 Screening Response Rates

The screening response rate is the total number of completed screenings divided by the total eligible DUs. The eligible DUs are computed by the sample dwelling units (SDUs) minus those SDUs not eligible to be included in the National Survey on Drug Use and Health (NSDUH). Ineligibles include vacant, not primary residence, not a DU, group quarters unit (GQU) listed as housing unit (HU), HU listed as GQU, occupied only by military personnel, other ineligible HUs, and those SDUs where the residents will live there less than half of the quarter.

As a brief summary, [Table 7.1](#) lists the sample totals and the national screening and interviewing response rates for the 2015, 2016, and 2017 surveys. Then, [Tables 7.2](#) through [7.15](#) present the screening response rates for the 2017 sample nationwide. The final national screening response rates for the 2017 NSDUH were 74.92 percent (unweighted) and 75.08 percent (weighted).

[Tables 7.2](#) and [7.3](#) show the national totals for ineligible and eligible cases, as broken down by population density and screening result code. [Tables 7.4](#) and [7.5](#) display the national totals by complete and incomplete screening result code and population density. The next sets of tables list results for each state, broken down by population density ([Tables 7.6](#) and [7.7](#)), eligibility rate ([Tables 7.8](#) and [7.9](#)), completion rate ([Tables 7.10](#) and [7.11](#)), and nonresponse rate ([Tables 7.12](#) and [7.13](#)). [Tables 7.14](#) and [7.15](#) show the reasons given for screening refusals for the national totals and then, in alphabetical order, for each state. Both unweighted and weighted tables are presented together for the nation and each state.

7.3 Interview Response Rates

The interviewing response rate is the number of completed interviews divided by the total number of eligible respondents chosen through screening. If there are any ineligible respondents (e.g., adults in the military and youths younger than 12), these are subtracted from the total. The national rates for 2015, 2016, and 2017 are shown in [Table 7.1](#).

[Tables 7.16](#) through [7.29](#) present the interview response rates for the national sample. The final national interviewing response rates were 69.66 percent (unweighted) and 67.12 percent (weighted).

[Tables 7.16](#) and [7.17](#) present the national unweighted and weighted interview response rates by smaller age groups for both 2016 and 2017. [Tables 7.20](#) and [7.21](#) present the unweighted and weighted interview response rates for each state by age group. Both tables are presented on the same page for each state. [Table 7.21a](#) displays the national weighted interview response rates by age group and race/ethnicity. [Tables 7.22](#) and [7.23](#) show national and state results of incomplete interviews by age, while [Table 7.23a](#) presents the national weighted results of incomplete interviews by both age and race/ethnicity. [Tables 7.24](#) and [7.25](#) contain interview refusal reasons by age group for the nation and for each state. [Table 7.25a](#) shows the weighted interview refusal reasons by age group and race/ethnicity for the nation.

The remaining interview result tables are presented in pairs with the first table providing the unweighted percentages and the second table providing the weighted percentages. [Tables 7.18](#) and [7.19](#) show the interview response rates by age group and gender. More detailed information by gender and smaller age groups is shown in [Tables 7.26](#) and [7.27](#). [Tables 7.28](#) and [7.29](#) present a summary of the interview response rates broken down by several factors including race/ethnicity, type of county, geographic region, and gender.

7.4 Overall Response Rate

The overall response rate is the screening response rate multiplied by the interview response rate. [Table 7.1](#) presents the unweighted and weighted overall response rates for the 2015, 2016, and 2017 NSDUHs. The final national overall response rates for the 2017 NSDUH were 52.19 percent (unweighted) and 50.39 percent (weighted).

7.5 Spanish Interviews

The percentages of completed interviews that were conducted in Spanish are shown by state in [Table 7.30](#) (unweighted) and [Table 7.31](#) (weighted). Spanish interviewing percentages also were analyzed by age and county type in [Table 7.32](#) (unweighted) and [Table 7.33](#) (weighted). [Tables 7.34](#) and [7.35](#) present the number of English- and Spanish-version interviews conducted by region and by population density, respectively.

7.6 Interviewer Assessment of the Interview

As part of each NSDUH interview, field interviewers (FIs) were required to assess the respondent's level of cooperation, understanding, and privacy during the interview. One question asked whether respondents revealed to the FI answers entered during the audio computer-assisted self-interviewing (ACASI) section.

These data were captured in the FI Observation Questions at the end of the interview and are summarized in [Tables 7.36](#) through [7.39](#). These tables present data based on the FI's assessment of the respondent's headphone use during the interview, the respondent's cooperation during the interview, the level of privacy during the interview, and how often the respondent

revealed answers in the ACASI section. Each of these tables is broken down by the respondent's age and race/ethnicity.

7.7 Number of Visits

FIs were required to make at least four callback visits to DUs when attempting to complete screening and interviewing; however, callbacks continued to be made as long as the field supervisor (FS) felt there was a chance that the screening or the interview could be completed in a cost-effective manner. In some cases, more than 10 visits were made to complete a screening or interview. [Tables 7.40](#) and [7.41](#) present data on the number of visits required to complete screenings and interviews.

Table 7.1 Summary of 2015-2017 NSDUH Results

	2015		2016		2017	
Eligible Dwelling Units	165,328		173,149		184,266

8. Quality Control

While every step of data collection was designed to collect the most accurate and reliable data possible, the 2017 National Survey on Drug Use and Health (NSDUH) included specific quality control processes, which are described in this chapter.

8.1 Field Supervisor and Interviewer Evaluation

8.1.1 Regular Conferences

Each field interviewer (FI) had at least one regularly scheduled weekly telephone conference with his or her field supervisor (FS). During this call, the FI reported progress made toward completing the work; reviewed production, time, and expense information for the week; discussed field problems; and asked any questions that emerged during the week. The FS provided feedback on the progress and quality of work and offered solutions to problems or questions encountered. The FS also shared any information from project managers, such as approaching project deadlines.

Regular weekly telephone conferences were also held between the regional supervisor (RS) and each of the FSs in his or her territory. FI production and performance, budget considerations, cost containment issues, and any occurring problems were discussed during these conferences.

8.1.2 New-to-Project Training and Training Evaluations

Beginning at new-to-project training, FI performance was monitored closely and consistently throughout the field period. Training classes were small enough to observe and evaluate each FI's individual performance and comprehension. Classroom trainers worked together to evaluate FIs on a daily basis.

The certification process (see Section 5.2.1) involved a formal one-on-one evaluation of each FI. All FIs were required to pass certification in order to successfully complete training. In addition, all new-to-project graduates were mentored by an experienced FI (see Section 5.2.5) to observe their behavior in the field and reinforce the study protocols learned during training.

8.1.3 Veteran Training and Ongoing FI Knowledge Evaluations

Veteran FIs were tested and trained to be sure they met the standards necessary to serve as NSDUH interviewers in 2017. FIs continued working only after they successfully completed all veteran training iLearning courses (see Section 4.6.1), attended their assigned in-person training session, and passed a certification (see Section 5.3.1).

Periodic evaluations of FI knowledge occurred during the year as FIs completed the "Quarterly Review" iLearning course before the start of Quarters 2 and 3 in 2017 (see Section 5.5). This tool reinforced and then tested the directive that following protocol helped collect data of the highest possible quality. All FIs also received a Showcard Booklet containing the "Screening and Interviewing Tasks" (see [Exhibit 8.1](#)), which listed the most crucial NSDUH protocol steps.

8.1.4 Field Interviewer Observations

In-person observations of FIs at work provided both an assessment of FI performance and insights about the performance of the survey instruments and procedures. Field observations were conducted nationally in all four quarters of 2017.

A total of 106 field observations were conducted nationwide. These included observations of 96 different FIs completing 307 screenings and 129 interviews. Observers, who were RSs; FSs; regional directors (RDs); training program and field materials, operations, instrumentation, and technical support team members; other RTI International staff; or Substance Abuse and Mental Health Services Administration (SAMHSA) staff, used specific forms to note FI behaviors on several project protocols.

To maintain consistency, observers used an Observer Reference Guide and a Field Observer Task List when planning assignments and interacting with FIs and respondents. After leaving each dwelling unit, the observer provided the FI with feedback on any items performed incorrectly and instructions on the proper procedures. This discussion took place before approaching the next dwelling unit to allow the FI to demonstrate the correct procedure immediately after feedback. referenced a feedback guide to provide direct feedback and retraining to FIs. Information regarding FI performance was made available to the appropriate FSs, who held debriefing calls with their FIs to discuss the results and ensure understanding of proper procedures. Results from these observations were formally documented in the 2017 NSDUH Full-Year Field Observation Report.

8.1.5 FS Evaluations of FIs

Throughout the year, FSs evaluated the performance of FIs and provided ongoing coaching and feedback. In October, to assess and document FI performance during 2017, FSs conducted a formal annual evaluation of all FIs by completing the electronic Headway Field Data Collector Performance Evaluation. Once reviewed and approved by Headway, the FS then discussed the evaluation with each FI continuing on the study.

When an FI left the project, the managing FS also completed the Headway Field Data Collector Performance Evaluation to document the FI's strengths and weaknesses. Completed final evaluations were added to the FI's personal data file at Headway.

8.1.6 FI Exit Interviews

Section 8.1.6 text has been removed.

8.2 Data Quality Team

The Data Quality Team was responsible for the identification, resolution, and distribution of information to field management staff concerning data quality and verification issues. An experienced member of the NSDUH management team served as the director of quality management, reporting directly to the project director and providing oversight for the team of two to three data quality managers (DQMs) and a verification coordinator. The DQMs closely monitored the data quality of designated RS areas, identifying trends in data quality errors and indications of potentially falsified screenings and/or interviews. The verification coordinator was responsible for operational tasks associated with the verification process, such as overseeing the call center and telephone verification activities. To ensure reliable succession planning and backup, the verification coordinator was also trained on the DQM role.

The Data Quality Team distributed at least four messages to FIs each quarter that highlighted specific data quality topics with corresponding FI Manual references. The topics, which typically included issues of immediate concern to the Data Quality Team, were then discussed on FS team conference calls.

8.3 Data Quality Monitoring

The NSDUH web-based Case Management System (CMS) enabled the Data Quality Team and field management staff to monitor the quality of each FI's work through case reports and other functions generated from data transmissions from the FIs' tablets and laptops. Reports generated from these data summarized data quality problems by error type and FI.

Access to the data quality reports varied by the project responsibilities of each staff member.

8.3.1 Field Management Data Quality Reports

Reports were available for review and analysis by field supervisory staff, project management staff, and the Data Quality Team so corrective actions could be taken as necessary. The information contained in these reports was addressed during weekly conference calls between FSs and FIs and between RSs and FSs.

8.3.2 Data Quality Team Data Quality Reports

Field supervisory staff focused their efforts on the field management data quality reports , while reports providing additional details or requiring more expertise for proper analysis were available for the Data Quality Team.

All reports were carefully reviewed by DQMs to identify trends in data quality errors and indicators of potential falsified work. DQMs highlighted these trends and discussed them with field management staff members to determine if further investigation or increased verification of an FI's work, FI retraining, and/or disciplinary action against the FI should occur. In addition, these reports were used to identify recurring data quality problems that warranted further discussion with FIs via quarterly data quality messages, iLearning refresher courses, and FI retraining sessions.

8.4 Verification of Completed Cases

In order to verify the quality and accuracy of each FI's work, a complex verification procedure was implemented. This involved the selection and verification of a percentage of final interview cases, as well as a percentage of final noninterview screening cases for each FI. Verification contacts for selected cases were made primarily by telephone.

The system allowed for the telephone and mail verification of additional work beyond the standard selection rates.

up to 100 percent

of an FI's completed work.

8.4.1 Telephone and Mail Verification

Contact information used in the verification process for completed interviews was obtained from the Quality Control Form completed by each interview respondent (see [Exhibit 8.5](#)). For the final noninterview screening codes of 10 (vacant), 13 (not primary residence), 18 (not a dwelling unit), 22 (dwelling unit contains only military personnel), 26 (not eligible for the quarter), and 30 (no one selected for interview), the contact information was recorded in the tablet at the time the case was finalized. For codes 10, 13, and 18, the contact was made with a knowledgeable person, such as a real estate agent, property manager, or neighbor.

For codes 22, 26, and 30, the verification was completed most often with the screening respondent.

The telephone verification was conducted by project-trained data collection interviewers (DCIs) in RTI's Call Center Services (CCS) unit. Spanish translations of all materials were available for verifications with Spanish-speaking respondents.

The NSDUH telephone verification script used depended on the final status code of the case (see Appendix D).

DCIs followed a script when speaking with the respondent to confirm that the FI was professional and followed project protocols. Most cases were finalized as having no problems

8.4.2 Field Verification

In addition to the telephone and mail verification procedures, additional steps were taken to ensure complete and accurate collection of data

The Data Quality Team worked with the RD as needed to select the cases to be field verified.

The Field Verifier returned to the sample dwelling units and queried the respondents to determine whether or not proper contact had been made by the FI in question.

The Field Verifier spoke with the respondent to ensure that the FI had followed protocol and acted in a professional manner. Results of the field verification were reported to the Data Quality Team and the FS, RS, RD, National Field Director, associate project director, and project director. If the Field Verifier found the work completed in the same quarter to be invalid, he or she reworked the case.

8.4.3 Verification Reporting Tools

8.4.3.1 Case Data Information Link

Project staff could view the Verification Status of each case through the Case Data Information link on the CMS.

8.4.3.2 Short FI Level Verification Report

The Short FI Level Verification Report provided a snapshot of the problems identified during verification to the Data Quality Team and other key field management staff. The main table provided a summary of verification data.

On page 2 of the report, more specific details of the problems identified during verification were displayed in tables based on the result code of the case

8.4.3.3 Field Verification Summary Report

The Field Verification Summary Report provided a summary of problems found during field verification to project staff. The number of cases selected for field verification was displayed along with the results.

Exhibit 8.1 Screening and Interviewing Tasks

Screening and Interviewing Tasks

Carefully review the below list to be sure you understand how to properly complete each task, referring to the FI Manual section(s) as needed for details.

Global Tasks	Manual
Read Verbatim Using the Exact Words Provided Do not skip or change words. Do not add additional words or explanations. Take your time to ensure you read each word.	6.2, 8.2
Know the Study Accurately and concisely answer respondent questions about the study and participation.	5.1 – 5.6 7.5
Use Materials Correctly Be organized and have materials accessible. Hand required materials as prompted on the screen. Remember to pack the Showcard Booklet, completed QC Form (sealed in the envelope) and Interview Incentive Receipt copies at the end of the interview. Do not ask for any other materials to be returned.	4.6 12.2
Protect Respondent Rights Follow ALL informed consent protocols exactly. Treat all information observed/ provided confidentially. Treat each person you encounter respectfully, professionally and ethically. Never reveal a respondent's answers to anyone, including the respondent's family members. Resist the temptation to reveal even positive information gleaned from an interview to parents or other household members.	2.4 – 2.6 4.10 7.6
Perform all Tasks in an Unbiased Manner Work calmly and professionally. Any comments must be neutral and unbiased.	7.2 8.2

Screening Tasks	Manual
Use Segment Materials to locate the correct SDU	3.4
Introduce Yourself and the Study to the Screening Respondent (SR) SR must be an adult (18+) resident of the SDU. Have your ID badge visible. Include the 4 points: your name, you represent RTI International, the sponsor is the US Department of Health and Human Services, and mention/offer the Lead Letter.	4.8 4.9
Obtain Informed Consent for screening Give the SR a copy of the Study Description to keep, and read the Informed Consent screen verbatim.	4.10
Complete the Household Roster Ask the questions verbatim and carefully enter responses. The SR must hear each question read in its entirety one time to hear all options. Subsequently you may accept responses early, <u>only</u> if the SR interrupts. Never assume or code by observation other than gender (<i>with one RARE exception if ethnicity/race refused for Householder – see FI Manual</i>).	6.4
Transition to the Interview Smoothly For selected respondent(s), share selection information with SR and interview respondent(s) if available. Ask and be prepared to complete the interview(s) at that time.	7.3 7.4
Collect Verification Information (for SDUs with no one selected) Read the text verbatim and enter details accurately.	6.5

Exhibit 8.1 Screening and Interviewing Tasks (continued)

Screening and Interviewing Tasks *(continued)*

Interviewing Tasks	Manual
Obtain Parental Permission to Speak with Selected Youth PRIOR to talking with youth about the study, read the script available on the tablet Respondent Selection screen to the parent/guardian.	7.4.2
Introduce Yourself and the Study to the interview respondent (R) Accurately answer any questions the R may have.	7.4, 7.5
Obtain Parental Permission to Interview Selected Youth Read the top box of the youth script from the Showcard Booklet to the parent/guardian. If two youth are selected, read the script twice to obtain separate permission for each youth. Confirm an adult will be at home during the interview.	7.6.2
Complete Informed Consent Protocols Read the age appropriate script from the Showcard Booklet verbatim and when prompted give the R a copy of the Study Description to keep (unless the R was the SR and still has a copy available; in all other situations, provide a copy to the R).	7.6
Choose an interview location that gives the respondent privacy	7.7
Set up the Laptop Properly and Efficiently Plug in laptop and headphones, and place fresh covers on the ear pieces in front of R. Turn on laptop and enter password. Enter the QuestID to begin the interview.	7.7.3
Ask Questions as Worded; Ask All Questions Allow R time to respond. Do not rush the R or allow R to rush you. Ask all questions even if you think you know the answer. Never assume/code by observation. Probe to ensure accurate/complete responses, particularly for initial answer of don't know.	8.2
Use Showcards Properly Turn the Showcard Booklet to the proper card, and give it to the R when instructed on the screen (or lay it on the table for the R). Do not prop up or hold the booklet yourself. Take the booklet back when finished with the question.	8.6
Introduce the Laptop to the R Read the introduction screens verbatim. As instructed, first point (with your finger) then read the description. Be sure the R can see the keyboard. Offer the headphones and demonstrate the volume adjustment.	8.7
Be Available During the ACASI Assist if the R has questions, but be sure you cannot see the screen. To protect confidentiality and privacy, NEVER read the ACASI questions out loud or allow them to play through the laptop speakers (even if the R thinks it is OK). Prepare the end of interview forms (Interview Incentive Receipt: Case ID ONLY; QC Form: all boxes in the FI portion). Leave the headphones plugged in until the very end of the interview.	8.7
Complete the QC Form Process Read the screen text exactly, provide the prepared form and envelope as instructed. R should place the completed QC Form in the envelope and seal before returning it to you. For youth respondents, ask the parent/guardian to complete the form.	8.11.1
Complete the Incentive Process Follow the steps on the screen in order (hand cash, mark box, sign and date receipt, give R top copy). Read the text on the screen verbatim. Provide a Q&A Brochure to the R, or the parent/guardian of a youth, reading the screen text. (This is not required if you provided a brochure earlier, such as when explaining the study.)	8.11.2
Understand your professionalism and dedication make a difference!	7.2

QUALITY CONTROL FORM

NOTICE: Public reporting burden (or time) for this collection of information is estimated to average 2 minutes per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to SAMHSA Reports Clearance Officer, Paperwork Reduction Project (0930-0110), Center for Behavioral Health Statistics and Quality, Room 155E57B; 5600 Fishers Lane, Rockville, MD 20857. An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number. The OMB control number for this project is 0930-0110.

OMB No.: 0930-0110
OMB Expiration Date:
07/31/19

VERSIÓN EN ESPAÑOL AL REVERSO

As part of our quality control program, we plan to contact a portion of the survey participants to make sure that the interviewer has followed the study procedures. We only ask general questions—no specific information is required. We sincerely appreciate your cooperation.

Please fill in the boxes below. (PLEASE PRINT CLEARLY.) Thank you.

[Your phone number will be kept confidential and will not be released to anyone other than our quality control representatives.]

Appendix A: New-to-Project Home Study Cover Memo

This page intentionally left blank

TO: NSDUH New-to-Project Field Interviewers
FROM: , National Field Director
RE: 2017 NSDUH Home Study Package
DATE: May 31, 2017

Thank you for your interest in the 2017 National Survey on Drug Use and Health (NSDUH). We are excited to have you join this important research study. Please carefully follow all instructions provided in this memo for completing the New-to-Project (NTP) eHome Study, CIPSEA Training and IRB Training courses (via the internet), and preparing for the NSDUH Field Interviewer (FI) training session.

You must complete the NTP eHome Study by 11:59 PM Eastern Standard Time on Thursday, June 15, 2017 and score at least 80% to attend this training session, using the instructions in Section II of this memo. In addition, **you must also complete the CIPSEA Training and IRB Training courses by the June 15 deadline.** Instructions on how to access these courses are provided in Sections III and IV of this memo.

Only desktop or laptop computers should be used to complete the eHome Study, CIPSEA Training, and IRB Training, as these programs do not work reliably with tablets, iPads or other mobile devices.

I. PREPARATIONS FOR THE NTP EHOME STUDY

Along with this memo, your shipment includes the materials listed below to prepare you for the upcoming training session. If you are missing any items, please let your Field Supervisor (FS) know right away.

- **2017 NSDUH FI Manual:** outlines specific protocols and procedures you must follow to complete your NSDUH assignment.
- **2017 NSDUH FI Computer Manual:** outlines protocols and procedures for the use and care of your NSDUH computer equipment. (*Your equipment will be issued at training.*)
- **NTP eHome Study (paper version):** use this for reference as you review the manuals and as a guide when you complete the NTP eHome Study via the internet.
- **Background Investigation Requirements memo:** provides additional information on the background investigative requirements for FIs hired on NSDUH.

II. COMPLETING THE NTP EHOME STUDY VIA THE INTERNET

- You must complete the NTP eHome Study on a computer with internet access. You only need basic computer skills, such as "pointing and clicking" the mouse and scrolling down the page. All other instructions are included on the screen within the eHome Study. This is an un-timed, open-book exercise, so carefully read and refer to the manuals as you answer the questions.
- You will also need your FI ID number to access the eHome Study. This number is provided in your hire letter from Headway.
- **In order to attend training, you must achieve a passing score of least 80% on the eHome Study** (or answer 35 out of 44 questions correctly). Anyone who misses 10 questions or more will fail the eHome Study and will not be allowed to attend training. Note the eHome Study consists of 48 questions, divided into three sections: Section 1 - FI Manual (questions 1-34); Section 2 - FI Computer Manual (questions 35-44); and Section 3 - General Internet (questions 45-48 – *not graded*). After submitting your eHome Study, your FS will receive your score and contact you within a few days to let you know how you did.
- Your completed eHome Study must be submitted by **11:59 PM Eastern Standard Time on Thursday, June 15, 2017.** If you miss this deadline, you cannot attend training.

III. ENTERING YOUR ANSWERS & SUBMITTING THE NTP eHOME STUDY

- Before beginning the NTP eHome Study, read this section in its entirety to ensure you have a clear understanding of the steps required to complete this task.
- Start by going to this website: <https://nsduhwebesn.rti.org/homestudy/login.cfm>
- This will take you to the entry screen, shown below. Type all six digits of your FI ID number, provided in your hire letter, in the FIID box. Read the System Use Notification and click inside the box to accept the terms. Then click the green button labeled "Login."

The screenshot shows the 'Please Login' screen for the NSDUH eHomeStudy. It features a green header with the title 'NSDUH eHomeStudy'. Below the header, the text 'Please Login' is centered. On the left, there is a text box with the instruction 'Enter your FI ID here.' and a red arrow pointing to the 'FIID' input field. Below this, another text box says 'Read and click box to accept terms.' with a red arrow pointing to the 'System Use Notification' section. The 'System Use Notification' contains a warning about unauthorized access and a checkbox for accepting terms. A red arrow points from the checkbox to a text box on the right that says 'Click Login.' The 'Login' button is a green rectangle at the bottom of the form.

- This will take you to the screen shown below to confirm your name. If the information is correct and you see your name displayed, click "Yes." If the information is incorrect, click "Cancel" to re-enter your FI ID.

The screenshot shows a confirmation screen with the text: 'Hello! You are [redacted] . If that is correct, click Yes to begin the eHome Study. Otherwise click Cancel.' Below the text are 'Yes' and 'Cancel' buttons. A red arrow points from the 'Yes' button to a text box on the right that says 'Confirm you see your name here.' Another red arrow points from the 'Yes' button to a text box below that says 'If correct, click Yes.'

- After clicking "Yes," you will enter the eHome Study and can begin answering the questions.
- To enter your responses, click the white circle next to the best answer category. Only one response can be given for each question.
- To move through the eHome Study, use the buttons found at the bottom of each screen. If you are unsure of the correct response, you have the option to skip questions and come back to them later using these buttons:
 - **First**: moves back to the first screen of the eHome Study
 - **Previous**: takes you to the previous screen
 - **Next**: advances to the next screen. Once you have completed all the questions on a screen, click "Next" to advance to the next screen and a new set of questions. Continue this process until you have answered all the eHome Study questions.
 - **Last**: moves to the last screen of the eHome Study

- **Save and Exit:** saves your responses and exits the eHome Study. When you come back to complete it later, you will be taken to the screen with the first unanswered question.
 - **Submit Test:** only seen on the last screen, the "Submit Test" button checks to be sure all questions are answered, and if so, submits the completed eHome Study to RTI. If all questions are not answered, it will instruct you to answer the remaining questions.
- Do not click the "Back" or "Forward" buttons in your browser (arrows in the top left corner of the screen), or the "X" (top right corner of the screen). If you click the "X" to exit, your responses will not be saved and you will have to re-enter them.

- If you must stop before completing the entire eHome Study, click "Save and Exit" to save the answers you have entered so far. To re-enter the eHome Study later, follow the same steps as the first time you entered, as described on page 2 of this memo. After entering the eHome Study, the program will take you to the screen with the first unanswered question. You may change your answers at any time (even after you have clicked "Save and Exit"), up until you click "Submit Test."
- If you experience any difficulty accessing or completing the eHome Study, **do not** click "Submit Test" until you have spoken with your FS. Once you submit the eHome Study, your answers are considered final and cannot be changed.
- To submit your eHome Study, click "Submit Test" on the final page and the program will check to see that you have answered all questions.
- If you have not answered all of the questions, you will be taken to the first unanswered question.
 - If you have answered all of the questions, you will see a confirmation screen asking if you are ready to submit your answers to RTI. Click "Yes," and your responses will be saved and submitted to RTI. Once you submit the eHome Study, you can no longer return to it.

IV. COMPLETING THE CIPSEA TRAINING VIA THE INTERNET

All NSDUH staff are required to complete training on the Confidential Information Protection and Statistical Efficiency Act of 2002 (CIPSEA) every year. You will learn more about why this training is so important as you complete the course. Before beginning the CIPSEA Training, read this section in its entirety to ensure you have a clear understanding of the steps required to complete this course.

To complete this training:

- Go to this website: <https://nsduhwebesn.rti.org/cipsea/>
- In your internet browser, you will see the *CIPSEA Training Registration* screen as shown below.

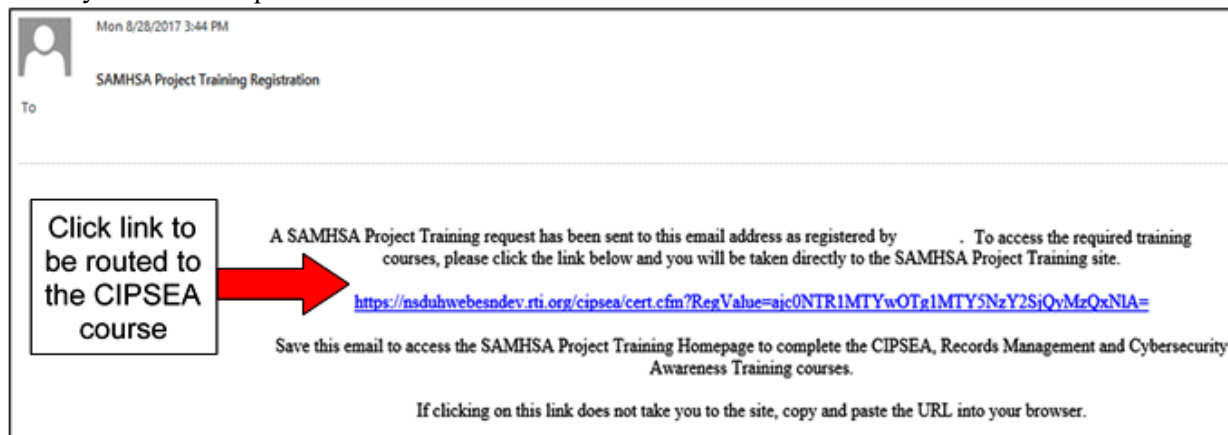

The screenshot shows the 'CIPSEA Training Registration' form. At the top left is the RTI International logo. The title 'CIPSEA Training Registration' is centered. Below the title is a note: '*All fields are required before registering.' The form contains several input fields: '*First Name:' with a text box and the instruction 'No nicknames or short names.', '*Last Name:' with a text box, '*Employee ID:' with a text box, '*Email Address:' with a text box and the instruction 'Registration information will be sent to this address.', '*Employer:' with a dropdown menu showing 'Docusource', 'Greene Resources', 'Headway' (selected), and 'HR Directions', and '*Role:' with a dropdown menu showing 'Select', 'Field Interviewer' (selected), 'Field Supervisor', and 'Headway Corporate'. Below these fields is a 'System Use Notification' section with a warning about unauthorized access and a statement that the system may be monitored by RTI International on behalf of SAMHSA. There is a checkbox with a checkmark and the text 'I understand that use of the NSDUH Data System is restricted to authorized users and accept the terms above.' To the left of this checkbox is a callout box that says 'Read and click box to accept terms' with a red arrow pointing to the checkbox. At the bottom right of the form are 'Register' and 'Reset' buttons. A callout box to the right of these buttons says 'After confirming all entries, click Register' with a red arrow pointing to the 'Register' button.

- Enter all requested information in order to register for this CIPSEA Training, making sure all entries are complete and accurate. Review the instructions below carefully:
 - Enter your first and last name and all six digits of your FI ID number **exactly as it is in the Headway system.**
 - Enter the email address you use for Headway communications.
 - Select **Headway** as your employer and "**Field Interviewer**" as your role (from the drop down list).
- When finished entering your information, double check your entries.
- Read the System Use Notification at the bottom of the screen. Click inside the box to accept the terms and then click "Register" to complete the registration process.

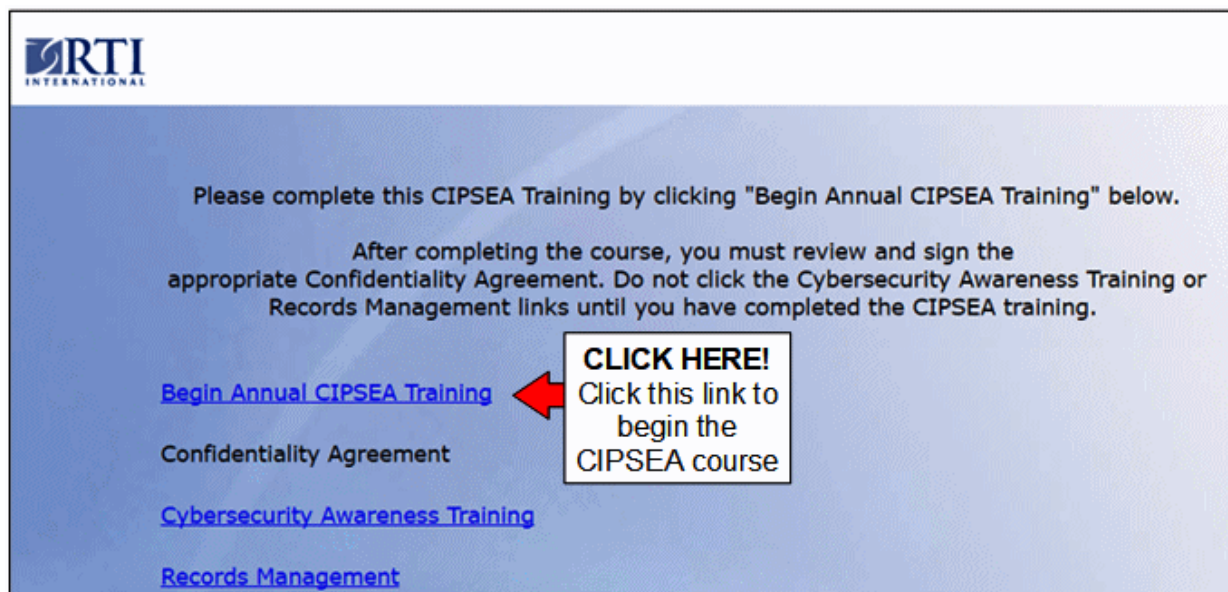

- If your entries do not match what is in the Headway system, you will see the message box to the right. After clicking OK, you will be taken back to the Registration screen where you can review and update your entries. As needed, contact your FS or Headway to confirm your information.

- Next, check your email. You will receive an email with the subject line "SAMHSA Project Training Registration" at the address provided on the Registration screen. As shown in the example below, this email contains a user-specific link to access and begin the CIPSEA Training Course. If you do not receive the email, check to be sure that it is not in your Junk or Spam email folder.

- Clicking the link in your email will direct you to the CIPSEA Training home page.
- Click "Begin Annual CIPSEA Training" to begin the CIPSEA training course.
- **WARNING: DO NOT** click the "Cybersecurity Awareness Training" or "Records Management" links as this can cause problems later. You will receive information about when to use these links at your upcoming NSDUH training session.

- Follow the instructions provided on the screen to review the CIPSEA training information. Use the **Next** and **Previous** buttons to move through the course. You must view each slide before advancing to the next slide. If you exit the course or your session "times out" before reaching the final slide, your progress will not be saved. You can re-enter the course at a later time by clicking the link provided in the email sent to you when you registered for the CIPSEA training.

ORTI INTERNATIONAL

Previous Next

Introduction

Welcome to the Confidential Information Protection and Statistical Efficiency Act of 2002 (CIPSEA) Training

- This course describes the CIPSEA requirements to protect information collected on surveys and the use of that information as part of other statistical activities
- As you complete this CIPSEA Training, read each screen carefully before clicking Next to continue
- You must review each slide and follow the instructions at the end of the course to receive credit for this training

Click Next and Previous to move through the course

- You must answer all five assessment questions at the end of the course. You will be allowed two attempts to answer each question.
- After answering the assessment questions, continue clicking "Next." You will see a screen that indicates you do not have a signed, hard-copy data collection agreement on file. **You will receive, review and sign this hard copy form at your NSDUH training session.**

ORTI INTERNATIONAL

Previous Next

You're almost finished with CIPSEA Training...

- Our records indicate you do not have a notarized, hard-copy CIPSEA Confidentiality Agreement on file. To complete this CIPSEA Training you must:
 - Review your information on the next page for accuracy and completeness, check the box acknowledging the information is correct and then click Submit.

- Next you will be asked to review your information and certify you have read and understood the material presented in the CIPSEA course, as shown below. After checking the box and clicking "Submit," you will receive an email confirming you have completed the CIPSEA Training course. Please save this email for your records.

CIPSEA Training Certification

Review the information below and submit your acknowledgement.
If you need to update your information please email

First Name:
Last Name:
Employee ID:
Work e-mail:

Employer Information:

Employer	Project	Role
Headway	NSDUH	Field Interviewer

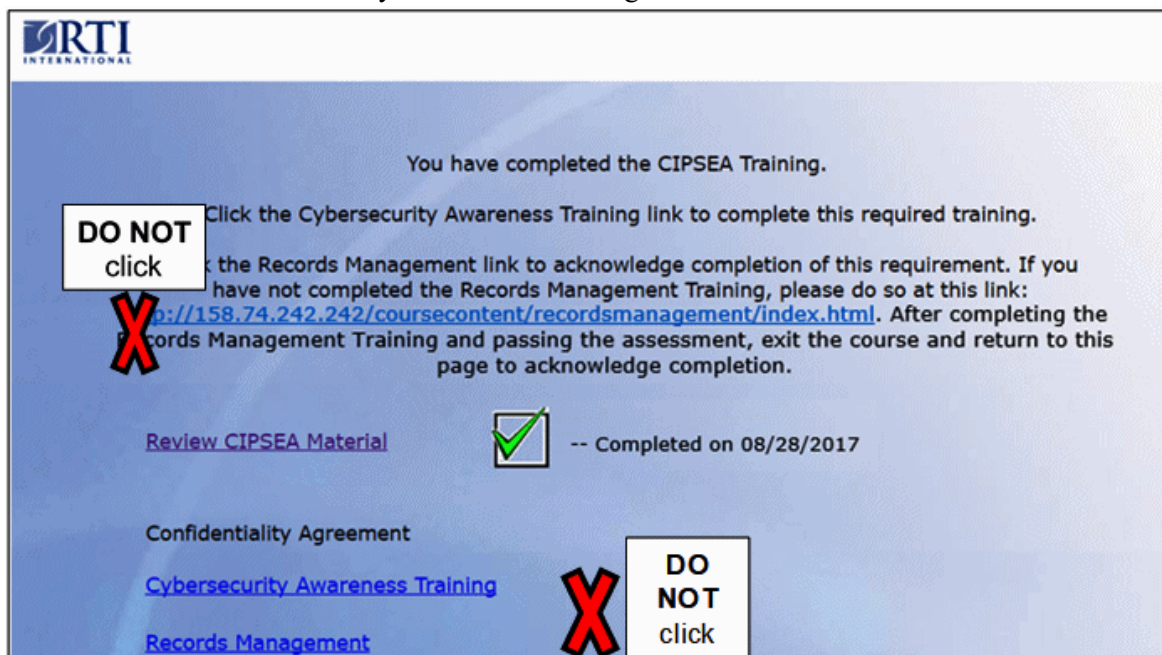

☒ By checking this box I certify that I have read and understand the material presented in this course.

Submit

- Next you will see the screen below. **CLICK EXIT** at this screen.

- Finally, you will see a screen indicating you have completed the CIPSEA training. **Close your internet browser** to end the session. **Do NOT click any links on this page.** You will receive more details on the listed courses at your NSDUH training session.

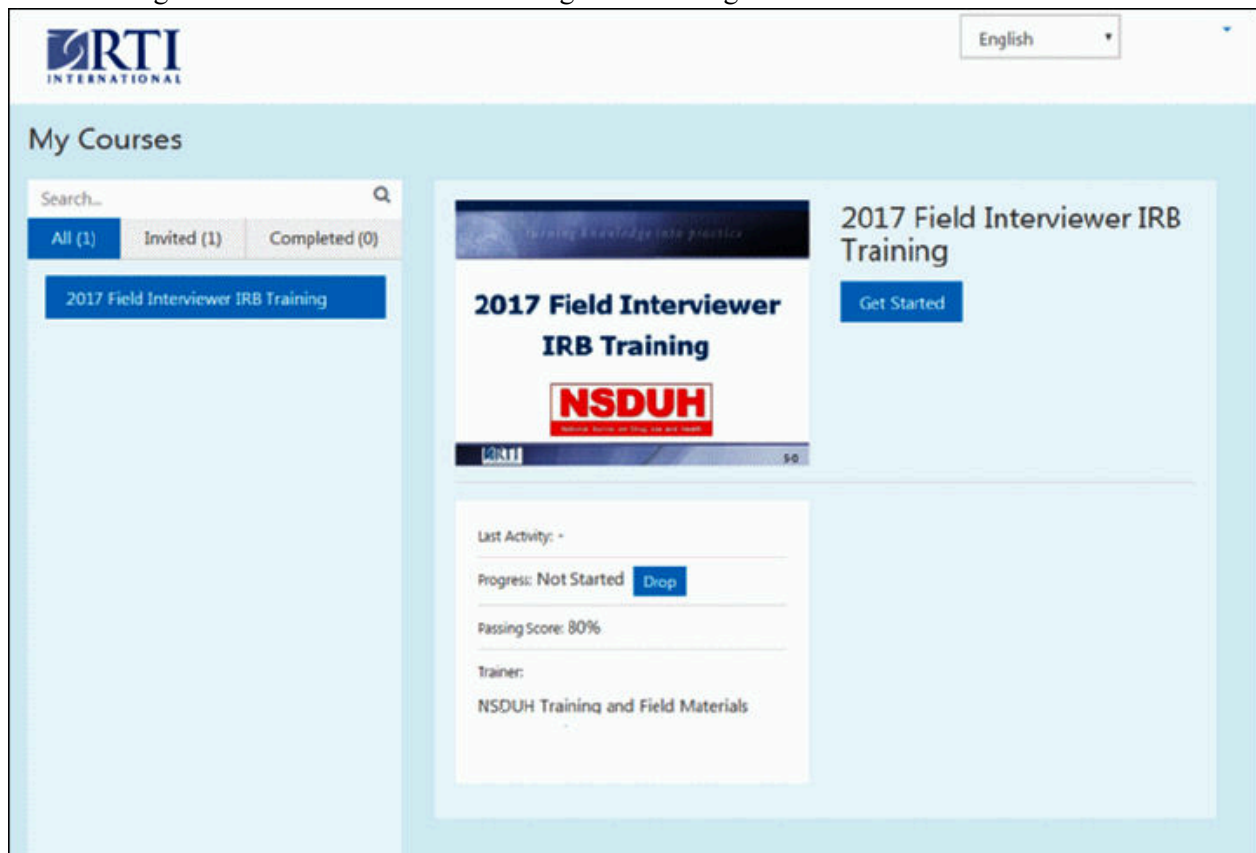

- Remember to complete the CIPSEA Training course by 11:59 PM Eastern Standard Time on Thursday, June 15, 2017. If you have any questions about the CIPSEA Training, please contact your FS.

V. COMPLETING THE IRB TRAINING VIA THE INTERNET

Staff on all RTI projects, including NSDUH, that conduct research with human subjects must complete Field Interviewer Institutional Review Board (IRB) Training before being allowed to work.

To access and complete this IRB Training course:

- Go to this website: <https://rti.mindflash.com/> 
- At the log-in screen, enter the following information:
 - Username:
 - Password:
- After logging in successfully, you will see a dashboard screen which will allow you to access the IRB Training course. Click "Get Started" to begin the training.

- To navigate within the course, use the right and left arrows displayed next to the slides (as shown in the picture on the next page). In addition, please note the following course features:
 - Audio Bar – To replay the audio, click the Play button on the bar at the bottom of the slide.
 - Progress Bar – Click the icon at the bottom of the screen to open the progress bar. Clicking the icon again will close the bar. This bar allows you to click on a slide to go directly to that screen. Note: You can only view a slide via this progress bar if all the previous slides have been viewed (i.e. you cannot jump ahead to a slide that has not been previously viewed in the course).

- Title Bar – This bar appears across the top of the slides and includes the following options:
 - Home – If you need to exit the course, click the Home (house icon) on the left. This will take you to the dashboard screen where you can log out (click the down arrow next to your name, then click "Log out.") Your progress in the course will be saved.
 - The Settings icon on the far right allows you to exit and log out of Mindflash. Your progress in the course will be saved.

- At the end of this course there are 5 assessment questions for you to answer. PLEASE NOTE YOU WILL ONLY HAVE ONE OPPORTUNITY TO ANSWER EACH QUESTION. Take your time and answer the questions carefully and thoughtfully. Use the left/right arrows or the Progress Bar to review the course content as needed.
- After the assessment, a Recap slide will appear showing the results of your assessment. To complete the course, click the right arrow to review the reference materials and continue to the end of course screen, which indicates you have finished the IRB Training Course and displays your score. To exit the course, click the Home or Settings icon as described above.
- If you exited the course before it was complete, from the dashboard, simply click "Resume Course" to go back into the course where you left off. Completed courses can also be reviewed from the dashboard as a refresher. If the course does not appear on the main dashboard screen, click the "Completed" tab to view a listing of completed courses.
- Remember to complete this course by 11:59 PM Eastern Standard Time on June 15, 2017.

VI. ADDITIONAL PREPARATIONS FOR NSDUH TRAINING

In addition to completing the NTP eHome Study, CIPSEA and IRB training, there are specific project materials you must bring to training. To ensure you have all required items, use the following check list:

Items You Must Bring to Training:

- _____ 2017 NSDUH FI Manual and Computer Manual
- _____ All documentation necessary to complete Section 2 of your I-9 Form, received in a separate shipment from Headway.
- _____ Two forms of identification required for the fingerprinting process: One must be a state or federally issued ID card (driver license or another Federal Government ID card). The other may be a Social Security card, military ID, voter registration card, passport or permanent resident card. You must bring the original documents, not copies.

VII. UPON ARRIVAL AT THE NSDUH TRAINING SITE

When checking into the hotel, ask the front desk for the location of **NSDUH Registration**. After you check in and drop off your bags in your hotel room, go to NSDUH Registration, which opens at 5:00 p.m., as soon as possible.

Be sure to bring the following with you to NSDUH Registration:

- _____ Your travel itinerary with departure information
- _____ Appropriate ID for employment verification and fingerprinting (i.e., valid driver license and Social Security Card or passport)

While at NSDUH Registration, you will:

- Have your photo taken for your ID badge
- Complete Section 2 of your I-9 form
- Complete necessary administrative forms
- Be fingerprinted for security purposes
- Receive additional information about training

VIII. ADDITIONAL INFORMATION ABOUT NSDUH TRAINING

- The temperatures in classrooms often vary so dress in layers to help regulate your personal comfort.
- During training, FI Labs will be available to you in the evenings, which provide an opportunity to practice in any areas desired with trainers present to assist and answer questions. In the interest of strengthening your skills, your FS or trainers may **require** you to attend FI Lab.
- All FIs are required to undergo a certification, where each FI works one-on-one with a trainer to complete both a NSDUH screening and interview. Certifications occur outside of class time on Days 5, 6 and 7.
- After training, every FI is required to complete mentoring in the field by an FS or experienced FI. Your FS will schedule this important post-training activity.
- You will be compensated up to 6 hours for time spent completing the training activities outlined in this memo (NTP eHome Study and two online courses). At your in-person training session, you will receive more information on documenting and submitting this time for reimbursement.
- If you have any questions about the information contained in this NSDUH eHome Study package or any other project-related questions, please contact your FS.

Appendix B: New-to-Project Home Study Exercises

This page intentionally left blank

2017 National Survey on Drug Use and Health

Home Study Exercises

This paper version of the NSDUH eHome Study is provided for your reference to use as needed while reviewing your manuals and completing the web-based exercises.

Please select a response for each question.

Section 1 – NSDUH FI Manual

Use your **NSDUH FI Manual** for reference to answer these questions. Select the best possible answer.

1. What agency sponsors the survey?
 - a. National Center for Health Statistics
 - b. National Institute on Drug Abuse
 - c. Substance Abuse and Mental Health Services Administration
 - d. Food and Drug Administration
2. The NSDUH is the nation's leading source of information on substance use patterns and behaviors.
 - a. True
 - b. False
3. NSDUH FIs should be available to work approximately 20 – 25 non-travel hours per week to conduct screening and interviewing during the data collection period.
 - a. True
 - b. False
4. Which of the following is your responsibility in the screening and interviewing process?
 - a. Mailing a lead letter to each sample dwelling unit (SDU) that has a mailable address (your FS does this for your initial assignment)
 - b. Locating (using the segment materials) and contacting SDUs
 - c. Obtaining informed consent from a respondent (gaining permission from a parent/guardian before approaching a youth respondent)
 - d. Transmitting data to RTI at the end of each day of work
 - e. All of the above
 - f. a. and b. only
 - g. b., c., and d. only

5. One very important requirement of your job is the proper treatment of the data; that is, keeping data completely confidential. Which information must you keep confidential?
 - a. Answers provided during screening
 - b. Answers provided during the interview
 - c. Observed information from before the interview
 - d. Observed information during or after the interview
 - e. a. and c. only
 - f. Any and all information you learn about the respondents
6. Group Quarters Units (GQUs) are generally any single living unit within a group quarters structure in which 10 or more unrelated persons reside.
 - a. True
 - b. False
7. What information does the Selected DU List provide?
 - a. Telephone numbers for all selected respondents
 - b. A list of housing units and group quarters units selected in the segment
 - c. A list of all the housing units and group quarters units found in the segment
 - d. The Segment ID
 - e. b. and d. only
8. Which of the following is included on the **Select Case** screen in the tablet?
 - a. The case identification number, referred to as the "Case ID number"
 - b. The street address, or a physical description of the SDU and its general location
 - c. The number of residents of the SDU
 - d. All of the above
 - e. a. and b. only
9. When do you make an entry in the Record of Calls (ROC)?
 - a. Each time you discuss the SDU with your FS
 - b. Each time you think about visiting the SDU
 - c. Each time you attempt to contact the SDU
 - d. Each time you actually speak with someone at the SDU
 - e. a., c., and d. only
 - f. c. and d. only
10. According to the NSDUH FI Manual, two productive time frames to visit SDUs are before 9:00 AM on weekend mornings and from Noon until 2:00 PM during the week.
 - a. True
 - b. False

11. Who is an eligible screening respondent for the NSDUH?
 - a. Any resident of the dwelling unit (DU)
 - b. Any adult (age 18 or over) who answers the door
 - c. An adult (age 18 or over) resident of the DU
 - d. Anyone that lives on the street
12. You must always wear your RTI photo ID badge when working on the NSDUH in the field.
 - a. True
 - b. False
13. According to the NSDUH FI Manual, two steps you can take to reduce refusals to participation include being able to explain the purpose of the study and believing in yourself.
 - a. True
 - b. False
14. The screening process includes questions about:
 - a. The number of people age 12 or older who will live at the SDU for most of the quarter
 - b. The correct address
 - c. The number of residents in the household who use licit and illicit drugs
 - d. Age, relationship, gender, Hispanic origin, race, and military status
 - e. b. and c. only
 - f. a., b., and d. only
15. At the end of the screening, it is possible for the selection process to choose:
 - a. One eligible household member for the interview
 - b. Two eligible household members for the interview
 - c. No one eligible in the household for the interview
 - d. Either a., b., or c.
16. The Call Distribution feature on the tablet must be used to plan your work. It can be accessed from the:
 - a. Functions menu on the Select Case screen
 - b. Screening Call Record screen
 - c. Respondent Selection screen
 - d. Record of Calls screen
 - e. Both a. and d.
17. You must read the Informed Consent screen on the tablet and give a Study Description to every Screening Respondent.
 - a. True
 - b. False

18. You should always attempt to complete the NSDUH interview:
- Immediately after screening
 - At a later date, to give the respondent time to prepare
 - With other household members in the same room, listening to the entire interview
 - With a parent or guardian sitting next to you for minor respondents
 - In complete privacy
 - a. and d. only
 - b. and c. only
 - a. and e. only
19. A good response to a parent who hesitates to let his child participate in the study because he thinks his child has not used drugs is:
- I'll mail you a copy of your child's answers so you can discuss them together.
 - If your child turns out not to use drugs, we'll throw the data out.
 - Your child looks like he has had plenty of experience using drugs. I'm sure he'll be a great respondent.
 - There are other topics included besides drugs. Knowing the opinions and experiences of your child is important as well.
20. If a respondent doesn't understand a question, you should rephrase it in your own words until the respondent provides an answer.
- True
 - False
21. Which of the following is **NOT** an acceptable probe?
- To repeat the question
 - To pause
 - To repeat the answer choices
 - To suggest answers
 - To use neutral questions or statements
22. Respondents will be given a cash incentive of \$30 for completing the entire NSDUH interview.
- True
 - False
23. What is the **minimum** number of times you are **required** to report to your FS by phone?
- At least twice per week
 - At least twice per month
 - At least once per week
 - At least once per month

24. During the screening and interview, reading verbatim means:
- a. Changing the wording if the respondent doesn't understand the question
 - b. After reading the question, explaining the meaning in your own words
 - c. Reading each question using the exact words shown on the screen
 - d. All of the above
25. For certain non-interview screening codes, you are required to obtain verification information about the contact person. What information must you record in the tablet?
- a. First name, last name, and phone number
 - b. First name and phone number
 - c. Phone number only
 - d. None of the above
26. You are required to give a Question & Answer Brochure to:
- a. Each adult interview respondent
 - b. Each youth interview respondent
 - c. Every screening respondent
 - d. The parent/guardian of each youth respondent
 - e. a. and b. only
 - f. a. and d. only
27. Before leaving your home to go work in the field, if the time and date displayed on the tablet are **not** correct, you should:
- a. Wait and work another day
 - b. Call your FS
 - c. Check your FI Computer Manual for instructions on correcting the tablet's settings
 - d. Disregard the time and date and go to work
28. NSDUH FIs are allowed to gather screening information from a neighbor after three failed attempts at contacting the residents of the SDU.
- a. True
 - b. False
29. What screen on the tablet displays the information needed to identify the selected interview respondent and begin an interview in the laptop?
- a. Select Case screen
 - b. Record of Calls screen
 - c. Verify Roster Data screen
 - d. Respondent Selection screen

30. NSDUH protocol requires that you always plug in and offer the headphones to each interview respondent.
- True
 - False
31. Who can serve as proxy for the insurance and income questions in the back-end CAPI portion of the interview?
- An adult family member living at the SDU
 - A knowledgeable family member who visits the SDU often
 - Any adult at the SDU while the interview is being conducted
 - None of the above
32. Which of the following is **NOT** an element of informed consent that must be provided to an interview respondent?
- Purpose of the study
 - Approximate length of interview
 - That consent may be withdrawn and participation discontinued at any time
 - A list of the questions that will be asked
33. When must completed Quality Control forms be mailed to RTI?
- On a weekly basis
 - After accumulating 10 or more completed forms
 - Within 24 hours of the completion of the interview
 - Never – the forms are for your records only
 - None of the above
34. You should **NOT** sign and date the Interview Incentive Receipt during the ACASI portion of an interview; you should always wait until you have presented the respondent with the incentive cash, when prompted by the laptop at the end of the interview.
- True
 - False

Section 2 – NSDUH FI Computer Manual

Use your **NSDUH FI Computer Manual** for reference to answer these questions. Select the best possible answer.

35. Which of the following is an advantage to using computer-assisted personal interviewing (CAPI)?
- a. Identifies inconsistencies in responses to critical items and lets you resolve them in the best way: with direct and immediate input from the respondent
 - b. Allows for intricate question and skip patterns based on entered data
 - c. Saves time and project resources by combining both interviewing and data entry
 - d. All of the above
36. To enter information into the tablet, you can use your finger or a felt-tipped pen.
- a. True
 - b. False
37. You should turn the tablet wireless (Wi-Fi) connection off when not transmitting or accessing the NSDUH Field Messaging Website.
- a. True
 - b. False
38. In the screening program on the tablet, text displayed in red, capital letters is to be read to the respondent.
- a. True
 - b. False
39. From the CAI Manager, you can:
- a. Access the internet to view various project web sites
 - b. Start a NSDUH interview
 - c. Transmit completed interview data to RTI
 - d. Review the FI Manual
 - e. Set the Date/Time
 - f. b., c., d., and e. only
40. The 3-letter code you need to move from the ACASI section back into the CAPI interview is:
- a. CAI
 - b. RTI
 - c. Your initials
 - d. To be distributed at training

41. You are allowed to use the Touchpad on the laptop during an actual CAI interview.
- a. True
 - b. False
42. To clean the laptop screen, you should:
- a. Use a cloth dampened with water only
 - b. Use a cloth dampened with soap and water
 - c. Spray the screen with a cleaning solution
 - d. None of the above
43. If the CAI Manager is "frozen" and won't accept any data during the interview:
- a. You may have accidentally entered an extra space in the answer field
 - b. The CAI program is too cold
 - c. The computer may not recognize the CAI program as the active program and you need to press [Alt] [Tab]
 - d. a. and c. only
44. If you are in a respondent's home and cannot complete the screening or interview because of a technical problem, you should:
- a. Call your FS immediately
 - b. Call Technical Support immediately
 - c. Break off the screening or interview and come back when your equipment works
 - d. None of the above

Internet Information Questions

Please answer the following questions concerning your internet availability and access. These answers will not be a part of your home study score and will only be used for information purposes.

45. In order to complete the electronic home study, where did you access the internet?
- a. Home
 - b. School
 - c. A workplace
 - d. A friend, neighbor, or relative's house
 - e. A public library, community center, internet café, coffee shop, or some other place with free internet access
 - f. A store, internet café, or some other place where you pay for access to the internet
 - g. A tablet, such as an iPad, Kindle Fire, etc. or a Smartphone, such as an iPhone or Android phone
46. What type of device did you use?
- a. PC (most likely running Windows)
 - b. Mac (MacBook laptop, iMac, etc.)
 - c. Tablet (such as an iPad, Kindle Fire, etc.)
 - d. Smartphone (such as an iPhone or Android phone)
47. Did you have any difficulties accessing or completing the electronic home study?
- a. Yes
 - b. No

Appendix C: NSDUH Data Collection Preparations Memo

This page intentionally left blank

DATE: December 13, 2016
TO: 2017 NSDUH Veteran Field Interviewers
FROM: , National Field Director
RE: 2017 NSDUH Data Collection Preparations

In preparation for the 2017 NSDUH, enclosed are the materials needed to complete several important tasks prior to the start of Quarter 1 data collection. Please read this memo and review the contents of this shipment carefully. In addition to this memo, your shipment includes:

- 2017 FI Manual Replacement Pages – Chapter 11
- 2017 FI Computer Manual – Appendix B
- 2017 NSDUH Veteran FI Bulk Supplies
- NSDUH Materials "Keep" List
- UPS Envelopes (*Do not use the UPS Envelopes until you receive further information*)

Begin the preparations outlined below as soon as possible after receiving this shipment. If you are missing any items, please contact your FS immediately.

Complete the following in preparation for 2017 Data Collection:
--

Review the 2017 FI Manual/Computer Manual changes:

- | |
|--|
| <ul style="list-style-type: none"> • Refer to the "2017 FI Manual and FI Computer Manual Review" chart beginning on Page 3 of this memo, and review the items listed. Keep this chart in the front pocket of your FI Manual for future reference. • Carefully review Chapter 11 of the 2017 FI Manual (included in this shipment) and insert these pages in your hardcopy FI Manual (recycle the pages removed). • Carefully review Appendix B of the 2017 FI Computer Manual (included in this shipment) and keep with your FI Computer Manual or in your laptop bag for future reference. |
|--|

Recycle or discard any materials not listed on the NSDUH Materials "Keep" List. To avoid confusion, it is important to discard any unusable materials before unpacking your 2017 bulk supplies.
--

Beginning on January 1, 2017, the web address for the Field Messaging Website will change. The new address will be: . Be sure to update any bookmarks as needed in January.
--

Charge time for completing these preparation tasks to **NSDUH 2017 Field Prep & C/L: 0213986-005.104.001** under the "Other" column with appropriate notes. The total time for completing these tasks is expected to be less than **2 hours**.

Thank you for your attention to these details and for your continued commitment to NSDUH. We look forward to seeing you in January!

2017 FI MANUAL AND FI COMPUTER MANUAL REVIEW

Carefully read the 2017 FI Manual and FI Computer Manual changes listed in the chart below. Yearly updates made to both manuals, such as dates, project numbers, images, etc. are not detailed here. After reviewing, keep this chart in the front pocket of your FI Manual for future reference.

At the 2017 Veteran FI Training sessions, your equipment will be updated with the 2017 FI Manual and FI Computer Manuals, which include these changes.

REQUIRED REVIEW: 2017 FI MANUAL CHANGES	
SECTION/PAGES	CHANGES TO NOTE
CHAPTER 3	
<i>Exhibit 3.11 List of DUs</i> (pgs. 3-19 and 3-20)	<ul style="list-style-type: none"> Updated List of DUs exhibit to include apartment indicator column.
<i>Exhibit 3.14 Group Quarters Listing Form</i> (pg. 3-24)	<ul style="list-style-type: none"> Added instruction to notify FS when a GQ is found to the upper left box on the GQ Listing Form.
<i>Section 3.6.1 Adding Missed Housing Units</i> (pg. 3-36)	<ul style="list-style-type: none"> When entering the address of a missed DU in the tablet, added the following reminder: "(Note: apartment numbers should be added to the end of the street name, ex: "Devon Avenue, Apt B".)"
CHAPTER 4	
<i>Section 4.10 Informed Consent</i> (pg. 4-8)	<ul style="list-style-type: none"> Added the following reminder on handling the Informed Consent process if the SR speaks a language other than English or Spanish: "If using a translator, read the tablet Informed Consent screen in English and allow the translator to translate for the SR."
<i>Section 4.11 Handling Language Barriers</i> (pg. 4-10)	<ul style="list-style-type: none"> Added the following reminder on using translators: "<u>If you are NOT an RTI-Certified bilingual FI, under no circumstance should you access or use the Spanish translations of the screening questions.</u> To ensure consistency across all languages, the questions must be read word for word in English to the translator. Then, the translator should provide the Spanish translation to the screening respondent. Do NOT allow translators to read the questions from the tablet in Spanish."
<i>Section 4.12 Handling Controlled Access Situations</i> (pg. 4-17)	<ul style="list-style-type: none"> Added information about the Doorperson Card available in 2017. If you feel you would benefit from using this card, speak with your FS.
CHAPTER 5	
<i>Exhibit 5.7 Countering Refusals</i> (pgs. 5-14 to 5-20)	<ul style="list-style-type: none"> Added reminders to use the NSDUH Introduction and/or NSDUH Benefits videos with respondents to counter refusals.
<i>Section 5.8 Working Safely</i> (pg. 5-23)	<ul style="list-style-type: none"> Added the following reminder: "If you observe any unusual or concerning situations, remove yourself from that situation as quickly and safely as possible and then call your FS."
<i>Section 5.9.3 On a Respondent's Property</i> (pgs. 5-25)	<ul style="list-style-type: none"> Added the following reminder: "Also, if you observe any unusual or concerning situations between household members in a respondent's home, remove yourself from the situation as quickly and safely as possible and then call your FS."

REQUIRED REVIEW: 2017 FI MANUAL CHANGES, CONT.	
SECTION/PAGES	CHANGES TO NOTE
CHAPTER 6	
Section 6.4.1 Starting the Tablet (pg. 6-3)	<ul style="list-style-type: none"> Added text and screenshot about the System Use Notification screen on the tablet.
Section 6.4.3 Introduction and Verify Address (pg. 6-9)	<ul style="list-style-type: none"> Clarified procedures for using a translator: all text must be read word for word from the tablet in English and the translator should translate the question for the screening respondent.
Section 6.4.6 Completing the Housing Unit Roster (pg. 6-21)	<ul style="list-style-type: none"> Added the following reminder: "It is important you <u>read the entire question at least once, while rostering the Householder</u>, so the respondent hears all the choices."
Section 6.5 Verification (pg. 6-29)	<ul style="list-style-type: none"> Added the following reminder: "Also, individuals providing verification information who do not live at the DU (neighbors, landlord, etc.) should not receive study-specific materials such as Q&A Brochures, etc."
Section 6.8 Edit Address (pg. 6-42)	<ul style="list-style-type: none"> When editing addresses, added the following reminder: "(Note: apartment numbers should be added to the end of the street name, ex: "Devon Avenue, Apt B".)"
Section 6.10.1 FI Assistant (pg. 6-47)	<ul style="list-style-type: none"> Updated listing of contents in the FI Assistant.
Exhibit 6.3 Q&A Reference Guides (pgs. 6-50 to 6-53)	<ul style="list-style-type: none"> Updated reference guides to match tablet content.
CHAPTER 7	
Section 7.2 Your Role as a Professional Interviewer (pg. 7-1)	<ul style="list-style-type: none"> Added the following reminder: "However, if while working your NSDUH assignment, you observe any unusual or concerning situation in a respondent's home, remove yourself from that situation as quickly and safely as possible and then call your FS."
Exhibit 7.1 NSDUH Interview Preparation Steps (pg. 7-2)	<ul style="list-style-type: none"> Added reminder to document in ROCs who gave permission to speak with and interview a youth respondent.
Section 7.4.2 Youth Respondent Introduction (pgs. 7-5 and 7-6)	<ul style="list-style-type: none"> Updated Parental Introductory Script screenshots and instructions: "The script includes bolded text in several places. You can read the script as written, or use your own words to obtain parent/guardian permission. If you use your own words, you must cover <u>all bolded text in the script with the parent/guardian</u>. If the parent does not speak English, the translator (if also used for the screening, for example), should translate the information for the parent. Only RTI-Certified bilingual FIs are allowed to use the Spanish Parental Introductory Script."
Section 7.4.2 Additional Contact Information (pg. 7-7)	<ul style="list-style-type: none"> Added the following reminder: "If you call (or receive a call from) a respondent, do not store any respondent contact information in that phone. Never create a "contact" profile for any respondent in your phone. Immediately after speaking with a respondent by phone, delete the respondent's telephone number from the incoming and/or outgoing call logs so that information is never stored on a personal phone. If unsure of how to do this, consult your phone's user manual."

REQUIRED REVIEW: 2017 FI MANUAL CHANGES, CONT.	
SECTION/PAGES	CHANGES TO NOTE
CHAPTER 7, CONT.	
Section 7.6.2 Parent/Guardian Permission to Interview Youth (pgs. 7-20 and 7-21)	<ul style="list-style-type: none"> Added the following reminders: "Read the Parental Introductory Script to the parent or guardian from the tablet, making sure to cover the bolded text if the script is not read verbatim." "Never store respondent contact information in your phone. You MUST delete any entries in your phone call logs for incoming/ outgoing calls after speaking with a respondent so that information is never maintained on your personal phone.
Section 7.7.2 Privacy (pg. 7-27)	<ul style="list-style-type: none"> Clarified interview procedures for ensuring privacy: "If household members are present or interrupt often during the CAPI portion, one way to achieve greater privacy is to position the respondent next to you so he/she can read the questions and response categories on the computer screen and then say the number or letter or simply point to the answer on the screen. This should rarely occur... If interruptions persist, break off and complete the interview at a later time."
CHAPTER 8	
Section 8.8.1 Physical Challenges (pg. 8-19)	<ul style="list-style-type: none"> Added clarification on how blind respondents answer questions with pill images: "A blind respondent will wear the headphones to listen to the questions and responses. Hearing the response options is particularly important when pill images display on the screen."
Section 8.10 Using a Proxy (pg. 8-21)	<ul style="list-style-type: none"> Added reminders on the use of proxies: "The proxy must also be able to speak and understand English. If you are an RTI-Certified bilingual FI, then the proxy must speak English or Spanish well enough to answer the questions on his or her own, without a translator. The interview respondent cannot serve as a translator for a proxy."
Section 8.11.1 Verification (pg. 8-22)	<ul style="list-style-type: none"> Added the following reminder: "Note: A youth completing the form may ask which phone number to record. ONLY if the youth asks, tell him/her to enter the parent's number, not their own personal number."

REQUIRED REVIEW: 2017 FI MANUAL CHANGES, CONT.	
SECTION/PAGES	CHANGES TO NOTE
CHAPTER 9	
Section 9.2.1 Pending Screening Result Codes (pg. 9-4)	<ul style="list-style-type: none"> To the description of result code 05, added: <i>"Only RTI-Certified bilingual FIs are allowed to access the Spanish questions on the tablet. There are no exceptions."</i>
Section 9.2.5 Recording Comments (pg. 9-17)	<ul style="list-style-type: none"> Added the following reminders about ROC Comments: "Also, remember to include notes describing unusual situations, such as why a screening roster member was made ineligible, or if there was a discrepancy between an age provided by the screening and interview respondents or for the other examples listed below. Examples of situations requiring ROC comments (list is not all inclusive): <ul style="list-style-type: none"> Use of a translator for the screening questions, and their relationship to the householder or screening respondent Screening or interview break-offs Roster discrepancies between the screening and interview, especially age and gender discrepancies for interview respondents Respondent impairments or difficulties which may result in deviation from standard protocol (e.g. deafness, blindness, etc.) Reasons a screening or interview respondent was made ineligible (e.g. military, moved, deceased, incarcerated, under age 12, etc.) Youth interviews – detail who gave permission to speak with youth, who gave permission to interview youth and which adult was present during the interview. Use of a screening respondent who was not listed on the roster (e.g. SR was a resident of the DU at the time of screening but will not live there most of the quarter) Screening or interviews completed at the wrong DU or incorrect Case ID."
CHAPTER 11	
Chapter 11	<ul style="list-style-type: none"> Replace entire chapter due to updates to mailing procedures.
APPENDIX C	
iLearning Instructions (pgs. C-2 and C-5)	<ul style="list-style-type: none"> Added a reminder to only use the "Drop" button on the dashboard screen if instructed to by your FS. Added instructions for using the Search tool on the dashboard. Begin typing the course name in the Search box and courses matching that description will appear in a list. Select the course you wish to complete from the list and begin as usual.

CHAPTER 2			
Section 2.2.5 Tablet Case (page C2-5)	<ul style="list-style-type: none"> Added reminder to check the tablet case regularly for wear when using the neck strap. 		
CHAPTER 3			
Section 3.4.1 Accessing the NSDUH Field Messaging Website (pg. C3-12)	<ul style="list-style-type: none"> Updated the web address for the Field Messaging Website in 2017: and added the following reminders: "...review the System Use Notification. This text indicates NSDUH information technology systems are for use by authorized users only and any unauthorized access can result in disciplinary action and/or criminal and civil penalties. Touch or click in the box to indicate you accept and understand these terms and then touch or click Login." "If you forget your password, click the "Forgot Password?" link below the login button to change your password. You will have to enter text in the CAPTCHA field (a process of entering displayed text to ensure you are not a computer trying to access your password). If you're having trouble reading the text, press "reload" until you see one you can read it clearly." 		
Section 3.4.1 Accessing the NSDUH Field Messaging Website (within the Field Messaging Website Navigation Summary) (pg. C3-15)	<ul style="list-style-type: none"> Updated instruction to check for new messages: <table border="1" data-bbox="576 919 1433 1039"> <tr> <td data-bbox="576 919 787 1039">Refresh your messages and check for new ones</td><td data-bbox="787 919 1433 1039">Touch or click the Refresh icon in your browser to check for new messages. </td></tr> </table> 	Refresh your messages and check for new ones	Touch or click the Refresh icon in your browser to check for new messages. 
Refresh your messages and check for new ones	Touch or click the Refresh icon in your browser to check for new messages. 		
Section 3.4.2 Viewing a Message (pg. C3-17)	<ul style="list-style-type: none"> Added the following reminder: <i>"If you have trouble opening attachments, try accessing the Field Messaging Website using the tablet internet browser. Touch the Internet icon, enter the website address (https://nsduhwebesn.rti.org/fiweb/login.cfm) and log on as you do normally."</i> 		
Section 3.4.3 Composing a Message (pg. C3-18)	<ul style="list-style-type: none"> Added the following reminder: <i>"Your FS is automatically included, but can be removed by clicking the "X" next to their name. (Note: for time sensitive messages, call your FS as well; it takes about 30 minutes for the message to be received in the FS's Inbox.)"</i> 		
Section 3.4.4 Exiting the NSDUH Field Messaging Website (pg. C3-19)	<ul style="list-style-type: none"> Added the following reminder: <i>"Note: there is no Drafts folder. When you log out of the website, any messages started but not sent are deleted. Therefore, when composing or replying to a message you must finish and send at that time or you will lose your work. Also as a security feature, the system automatically logs users out after 15 minutes of inactivity. If you take a 15 minute break, you will lose your work."</i> 		

REQUIRED REVIEW: 2017 FI COMPUTER MANUAL CHANGES, CONT.

CHAPTER 4	
Section 4.3.2 The Left Side (pg. C4-3) and Section 4.3.3 The Right Side (pg. C4-3)	<ul style="list-style-type: none"> Added to the USB Port description: "This port can be used with your Yubikey (see Appendix B) and..."
CHAPTER 5	
Section 5.2 Entering the CAI Manager (pg. C5-2)	<ul style="list-style-type: none"> Added screenshots and instructions for the System Use Notification and Windows password screens.
CHAPTER 6	
Section 6.5 Troubleshooting (pg. C6-13)	<ul style="list-style-type: none"> Added reference to Section 8.4 for troubleshooting during transmission.
CHAPTER 7	
Section 7.2.2 Screen Care (pg. C7-2)	<ul style="list-style-type: none"> Added reminder to regularly check the tablet case for wear when using the neck strap.
Section 7.3.2 Screen Keyboard, and Body Care (pg. C7-3)	<ul style="list-style-type: none"> Added reminder to never use alcohol wipes on the laptop screen. Only use these on the keyboard.
CHAPTER 8	
Section 8.2 Troubleshooting the Tablet (pg. C8-3)	<ul style="list-style-type: none"> Added the following reminder: "If there are problems displaying the tablet keyboard on the password screen, turn the tablet to the side for landscape mode and try to access the keyboard again."
Section 8.3 Troubleshooting the Laptop (pg. C8-7)	<ul style="list-style-type: none"> Added instructions if the screen turns black during the interview: "Most likely the laptop is in 'sleep' mode. The laptop will automatically go into 'sleep' mode after 10 minutes of inactivity. Simply press any key to 'awaken' the computer. You will then have to insert the Yubikey and enter the username and your Windows password. Refer to Section B.2 in Appendix B for more details."
Section 8.3 Troubleshooting the Laptop (pg. C8-8)	<ul style="list-style-type: none"> Updated text to reference both the Windows and security passwords. Added the following reminder if the laptop goes into "sleep" mode: "Once you are connected to electricity, simply press the power button to 'awaken' the computer. You will then have to insert the Yubikey and enter the username and your Windows password. Refer to Section B.2 in Appendix B for more details."
Section 8.3 Troubleshooting the Laptop (pg. C8-9)	<ul style="list-style-type: none"> Updated reference under "The date or time displayed on the CAI Manager on the laptop is not correct:" to Section 5.14.
Section 8.5.4 Returning Your Equipment (pg. C8-12)	<ul style="list-style-type: none"> Removed reference to FedEx and replaced with "shipping address."

REQUIRED REVIEW: 2017 FI COMPUTER MANUAL CHANGES, CONT.	
SECTION/PAGES	CHANGES TO NOTE
APPENDIX A	
<i>Overview of Tablet Screening Process</i> (pg. CA-1)	<ul style="list-style-type: none"> Added reference to System Use Notification in instructions for accessing the NSDUH Screening. Replaced instructions on correcting the date or time with a reference to <i>Section 3.3.1</i>.
APPENDIX B	
<i>YubiKey Overview</i>	<ul style="list-style-type: none"> Added a new Appendix detailing the use of the YubiKey. Carefully read his entire appendix before attending 2017 Veteran FI Training. You must use a YubiKey in 2017 to access the CAI Manager on the laptop, conduct interviews and transmit data.

Appendix D: Verification Scripts

Verification scripts have been removed.
