## Washington

URS Table Number	General Notes
2A & 3 & 5A & 6	The increase is due to continued impact of Medicaid expansion—a greater number of Medicaid enrollees were in community MH services due to the broader income allowances for newly eligible.
7	For Evidence-Based Practices for Early Serious Mental Illness, we don't have a way to identify other EBP Early Serious Mental Illness in our expenditures - only MHBG FEP expenditures are included in the table. Other Federal Fund Expenditures decreased because two mental health grants ended in SFY17, the Systems of Care grant and the Bringing Recovery into Diverse Groups through Engagement & Support Svcs. There was a decrease in expenditures for our Projects for Assistance in Transition from Homelessness and Becoming Employed Starts Today grants from SFY17 to SFY18. There was also a decrease in claims against the CHIP grant in SFY18. State Funds Expenditures increased because the State has increased its investment in the state hospitals to address staffing needs, as well as investing in other forensic facilities to increase capacity to meet statutory requirements for competency evaluations – an increase of about \$75 million. The State also increased its investment in community mental health services – an increase of about \$11 million. State Hospital Expenditures increased because Medicaid and local expenditures increased based on an increase in Medicaid eligible clients, as well as more clients with covering their care with insurance/private pay – increase from 2017 to 2018 is about \$16 million. Increase is also because the State has increased its investment in the state hospitals to address staffing needs, as well as investing in other forensic facilities to increase capacity to meet statutory requirements for competency evaluations – an increase of about \$75 million
7A	The increase of expenditures is due to the fact that the Division of Behavioral Health and Recovery has been currently piloting the New Journeys early intervention program, which includes components of evidence-based practices such as Oregon's Early Assessment & Support Alliance and NAVIGATE that have involved child welfare, criminal justice, and other social services agencies, as well as behavioral treatment facilities and hospital emergency departments in outreach and screening.
12	Contributing factor for the decrease in the percent of children with co-occurring disorders would be due to the implementation of DSM 5. DSM 5 does not use multi-axial diagnoses. The data set from BHOs would only contain the primary MH diagnosis. Co-occurring would be captured if youth were open in both a SUD program and an MH program. With movement of SUD into the BHOs, review of co-occurring diagnoses would be more rigorous, since the MH diagnosis would also have to be of sufficient severity/acute to meet the Access to Care Standards. Additionally, there could have been a fall-off in reporting as SUD and MH providers became accustomed to new reporting requirements for native transactions. This would have been a much bigger change for SUD providers.
14A	Beginning July 1, 2017, American Indians/Alaska Natives (AIAN) receiving Washington Apple Health (Medicaid) coverage have the choice to receive their treatment of mental health and substance use disorder (together, known as "behavioral health") either through the managed care program or through the Apple Health fee-for-service (FFS) program. It then explains the decrease of AIAN clients served under BHOs.
15	The increase of the number of consumers in Jail/Correctional Facility is relate to the initiatives around Medicaid suspension. If an individual has a brush with the legal system and has a JBRs (Jail Booking and Release System) that feeds data into their address info—they can wind up with a Jail address on file—especially if they do not subsequently have updated address info on their file.
