What populations are reported? All Clients Number of States Reporting All Clients: 49 Number of States Reporting Some Clients: 9

When is Employment Status Measured?	At Admission	At Discharge	Monthly	Quarterly	Other
WV	Yes	Yes	-	-	Critical service juncture
US	42	29	4	5	27

Note:

*In Labor Force is the sum of consumers employed and unemployed.

**With Known Employment Status is the sum of consumer employed, unemployed and not in labor force.

Consumers employed as a % of those in labor force uses adults employed and unemployed as the denominator.

Consumers employed as % of known employment status uses the sum of persons employed, unemployed and not in labor force as the denominator.

This table uses data from URS Table 4.

State Notes:

Age None

Gender None

Overall Employment status not required to be reported for non-Medicaid and non-Charity Care individuals. The reporting of this variable is not validated for Medicaid or Charity Care people. See General Notes for additional comments.

Outcomes Domain: Employment Status of Adult Mental Health Consumers Served in the Community by Diagnosis, FY 2018

West Virginia

Reporting Period: 7/1/2017 To: 6/30/2018

Diagnosis	State				Employed as a % of Labor Force		Employed as % of Known Employment Status		% of Consumers with Dx		States Reporting

General Notes FY 2018

West Virginia

URS Table Number	General Notes
Race/ Ethnicity	WV has a "race other" option which is added to Race Not Available. Also, Individuals can select multiple race categories. The race categories selected by that person may not be consistent. When this occurs the category "More Than One Race" is selected for reporting purposes.
All tables with client level data excluding hospitals	Medicaid managed care was implemented January 2016. This change resulted in a significant decrease in the number of people needing service authorizations from Medicaid's ASO which in turn decreased the number of individuals on whom the Department received information. Individuals receiving services in the managed care program are not included due to the lack of necessary data. As to be expected, the biggest decrease is noted in individuals with an SMI or an SED living in a private residence.
3, 6	One of the State Psychiatric Hospitals lost their CMS Accreditation. As a result they only accepted forensic admissions. The county with the most population moved from having part time mental hygiene commissioner to having two full time commissioners. This change is associated with a tremendous decrease in the number of commitments from that county.
6	The drop in total admissions is largely due to the change in the County with the largest population (Kanawha County), and historically the largest number of inpatient hospitalizations, as they moved from having part time mental hygiene commissioners to having two full time commissioners. This change is associated with a tremendous decrease in the number of commitments from that county. It is believed that the current structure allows for more training as these commissioners are dedicated specifically for the mental hygiene process.
6	One of the State Psychiatric Hospitals discharged a number of forensic patients to a private inpatient hospital. For the purposes of the state data system each of these "transfers" was entered as a discharge. Those transferred were typically those with longer lengths of stays, artificially increasing the LOS for all discharges.
7	We are still reviewing and developing our methodology to the development of the calculations for the state expenditures for 2017. A letter was sent to SAMHSA on November 27, 2018 requesting consideration that we materially complied with the Maintenance of Effort (MOE) requirements. Therefore, we will be requesting to modify 2017 and 2018 expenditures once this task is finalized. Total Other Federal Funds Expenditures and total Ambulatory/Community Non-24-hour care Expenditures—the increase from FY17 can be contributed to the increase of expenditures of approximately \$800,000 to the Cooperative Agreement to Benefit Homeless Individuals (CABHI) grant. Total State Funds Expenditures—the numbers that we used for 2017 did not include a large portion of state expenditures due to the development of our methodology to calculate state expenditures. We will be requesting to modify 2017 expenditures once this task is finalized. Total Primary Prevention Expenditures—the increase from FY17 is contributed to the timing of payments to the prevention grant. There were more grant payments processed in 2018 than in 2017. Total State Hospital Expenditures—the 2017 state hospitals expenditures did not include \$22.6 million in diversion costs.
9	The methodology for the administration of these surveys changed for the reporting year. In the past, surveys were mailed to participants. Due to a low return rate, surveys were changed to face to face, convenience sampling. With this new methodology, survey return rates were 100% and the surveys were completed closer to the time of service.
12	Currently, client SMI/SED and co-occurring status is not obtainable by BBH for those clients in Managed Care. However, we are currently working on policies that would allow BBH to obtain this information in the future. Those in managed care complete a different assessment and that data does not translate to our process.
12, 14A, 16	Medicaid managed care was implemented January 2016. This change resulted in a significant decrease in the number of people needing service authorizations from Medicaid's ASO which in turn decreased the number of individuals on whom the Department received information. Individuals receiving services in the managed care program are not included due to the lack of necessary data. As to be expected, the biggest decrease is noted in individuals with an SMI or an SED living in a private residence.
14A	BBH does not believe fewer people are being seen with SMI/SED, but feels the lack of data involving clients in Managed Care is causing a drop in data received by BBH.
16	BBH does not believe fewer people are being provided supportive housing and ACT services but feels the lack of data involving clients in Managed Care is causing a drop in data received by BBH.
16A	Data on first episode psychosis are not collected.

URS Table Number	General Notes
20A, 20B, 21	The hospitals only collect and report on a single race category and do not collect ethnicity. However, WV uses a unique identifier which goes across community and hospital data. Race, as well as ethnicity, is pulled from the unique identifier which uses race and ethnicity reported to community providers in addition to race reported to the hospital. The number of people reported as More Than One Race is due to multiple races being selected across the providers or the selection of multiple race categories within a single provider by the person. The Hispanic/Latino origins for people admitted only to a hospital is not known only the Hispanic status is reported.
20A	During the reporting year there was a decrease in the total number of discharges and a similar decrease in the number of readmissions during the 30 day period. Much of the decrease can be attributable to a reduction in admissions due to one of the State Psychiatric Hospitals losing their CMS Accreditation. As a result, they only accepted forensic admissions. Many of the individuals who would have historically been admitted to this facility were admitted to private institutions. Additionally, the county with the largest population moved from having part time mental hygiene commissioners to having two full time commissioners. This change is associated with a tremendous decrease in the number of commitments from that county.
20B	In both the 30 and 180 day categories, there was an increase of a total of seven (7) individuals. With such a small sample size, the percentage of change was impacted greatly. Much of the change was experienced as the State Hospital that lost its CMS accreditation during the year had discharged some individuals to private hospitals who returned when the facility began taking forensic admissions. Forensic patient transfers from private facilities to State facilities shows as a readmission.
21	During the reporting year there was a decrease in the total number of discharges and a similar decrease in the number of readmissions during the 30 day period. The 30 day readmission rate for the reporting period is also a return to the rate in the 2016 reporting period, showing 2017 as having a higher than normal rate of readmission. One of the impacts of the higher rate in 2017 was the county with the largest population moved from having part time mental hygiene commissioners to having two full time commissioners. This change is associated with a tremendous decrease in the number of commitments from that county.
