

Key to Selected Variables

The following key lists selected demographic, geographic, and socioeconomic and health characteristic variables along with substance use and mental health variables used throughout the *Results from the 2019 National Survey on Drug Use and Health: Detailed Tables*. This key also provides the specific categories displayed for each variable in the tables. Definitions for many of the measures listed in the key are available in [Appendix A](#). The label assigned to each variable listed in the key maps directly to the labels used in the table of contents but may differ slightly from those used in the detailed tables. For example, in the detailed tables, age category variables are typically referred to as "age group" or "detailed age categories"; however, in this key and the table of contents, more detailed labels (e.g., adult age categories, youth age categories, college age categories) are provided for the various age breakdowns. This key can be used in conjunction with the Table of Contents and other tools described in the [Reference Tools](#) section to help navigate the detailed tables.
