

## 2021 Uniform Reporting Summary Output Tables Executive Summary

State Mental Health Agencies (SMHAs) compile and report annual data as part of their application package for SAMHSA's Community Mental Health Block Grant. These compiled data constitute the Uniform Reporting System (URS).

The URS is comprised of 21 tables that are developed by SAMHSA in consultation with SMHAs. The 2021 URS Output Tables present findings from 59 states and U.S. territories. Each output table provides summary information on the SMHA clients served in 2021: sociodemographic characteristics of clients served, outcomes of care, use of selected evidence-based practices, client assessment of care, insurance status, living situation, employment status, and readmission to state psychiatric hospitals within 30 and 180 days. Key data highlights are listed below:

- In 2021, 8,195,517 clients received SMHA services from 59 states. This is an increase from 8,013,396 SMHA clients in 2020. There were 5,789,234 adults (or 17.3 per 1,000), 2,175,848 children (or 29.9 per 1,000) served. About 9,311 (0.1 percent) clients were missing age data.
- Among SMHA clients, there were 4,342,545 (53.0 percent) females served while there were 3,806,666 (46.4 percent) males served. In 21 states and U.S. territories, more SMHA males were served than females. While in 38 states and U.S. territories, more SMHA females were served.
- The age distribution among SMHA clients was the largest among ages 25-44 with 32.9 percent, followed by ages 45-64 with 23.6 percent, children ages 0-12 with 14.8 percent, and children ages 13-17 with 12.1 percent.
- The highest percentage of SMHA clients that were served was among the White population with 58.1 percent, followed by Black or African Americans with 17.9 percent, and only 15.7 percent for Hispanics.

# Montana 2021 Mental Health National Outcome Measures (NOMS): SAMHSA Uniform Reporting System

Utilization Rates/Number of Consumers Served	U.S.	State	U.S. Rate	States
Penetration Rate per 1,000 population	8,195,517	66.44	24.59	59
Community Utilization per 1,000 population	7,974,393	65.84	23.93	59
State Hospital Utilization per 1,000 population	114,987	0.84	0.36	53
Other Psychiatric Inpatient Utilization per 1,000 population	454,356	3.05	1.52	45

Total	41,339	100.0%	5,629,436	100.0%	38.3	16.9	58

## Note:

US totals are based on states reporting.

This table uses data from URS Table 15a.

US penetration rates are calculated uniquely for each data element based on only those states who reported numerator (clients served) data.

## State Notes:

Age The 583 RTC clients age 0-20 represent all clients served in youth PRTFs (including those who had turned 18 after the midpoint). The 105 RTC clients aged 21+ represent those served in MT MH Nursing Care Center.

Gender None

Overall Populated by Hendall using MT's 2021 MH-CLD BCI dataset.

## Montana

URS Table Number	General Notes
2A & 2B	Criteria for inclusion: Medicaid-eligible (all ages) and adult grant-funded clients whose SFY21 mental health services were paid with public funds. There were 3.6% fewer clients in FY21 (71,754 vs 74,413) likely due to the impact of COVID-19, as well as ensuring that children with developmental and/or intellectual disabilities but with no mental health diagnosis were excluded from reporting (for a total of 23,009 youth in FY21 vs 24,192 youth in FY20, and a total of 48,745 adults in FY21 vs 50,221 adults in FY20).
3	The 583 RTC clients age 0-21 represent all clients served in youth PRTFs from MMIS and HMK (including those who had turned 18 after the midpoint). The 105 RTC clients aged 21+ represent those served in MT MH Nursing Care Center.
4	Employment status is tracked only for clients receiving case management services at community mental health centers, clients in grant-funded programs, and MHSIP Survey recipients. The decrease in percent employed among those whose employment status was available (from 35% in FY20 to 17% in FY21) is likely due to the impact of the COVID-19 pandemic, as well as reduced data collection from the CMHCs due to reduced staff available for data collection. This also explains why there was a decrease in the percent with a recent update on employment.
5A & 5B	The differences seen in funding sources compared to previous years is due to an increase in grant-funded clients, and to new methodology that included counting Medicare reimbursement as non-Medicaid.
6	<p>The increase in average and median LOS for discharged PRTF clients is due to there being more than 3x as many in SFY21 who were discharged with a LOS of &gt;1 yr (20 in FY21 vs 9 in FY20), including one client who was discharged after 2 yrs. The decrease in average and median LOS for PRTF residents at end of year was likely related to fewer PRTF clients admitted in FY21 such that there were a total of 121 PRTF clients in FY21 who were admitted throughout the reporting period and were still residents at end of year vs that same number (121) PRTF clients in FY20 who were admitted since the midpoint of the reporting period and were still residents at the end of the year.</p> <p>The increase in Total Served at Beginning of Year in Community Programs, as well as the decrease in the number of Admissions during the Year in Community Programs, suggests there was greater continuity in services both at the beginning and throughout FY21 compared to FY20. This may have been due to the positive impact of COVID-related federal monetary support, resulting in an increase in crisis programs, as well as providers and clients having better adapted to changes in the way services were received due to the pandemic. The increase in Other Psychiatric Inpatient average and median LOS for youth residents at the end of the year is due to two outliers.</p>
7 & 7A	<p>The increase in overall spending, including Medicaid spending, is due to including youth expenditures in SFY21, most of which were not included in SFY20.</p> <p>The increase in Other Psychiatric Inpatient Care is due to including youth psych inpatient expenditures in SFY21, as well as moving the expenses for adults out of the "Other 24-hour Care (Residential Care)" row and up to the "Other Psychiatric Inpatient Care" row.</p> <p>The increase in Ambulatory/Community Non-24-Hour Care expenditures is due to including youth expenditures in SFY21.</p> <p>The decrease in Total EBP for ESMI Expenditures was due to the FEP contract increasing to \$400,000 in FY2020 and FY2021 to extend services statewide, but when this was unattainable due to staffing capacity at potential provider sites (which were not in a position to implement a new program in the midst of COVID-19), funding was returned to the original amount of \$200,000.</p> <p>The increase in Total Other Funds Expenditures is due to receiving federal COVID funds through the Cares Act, and due to including youth expenditures in SFY21.</p> <p>The increase in Total Administrative Expenditures is due to the COVID funds through the Cares Act, as well as the Regular Service Program Crisis Counseling Grant and the PATH/Homeless grants, which were not active in FY20.</p>
8	The increased MHBG spending compared to FY20 was due to there being FY21 expenditures for Infrastructure Support (where in FY20 there were none), and increased spending in FY21 for Training and Education. In addition, there were no FY21 Planning Council Activities due to the impact of COVID-19.
11	The 7% increase in adults' reporting positively on Participation in Treatment Planning, and the 4% decrease in Families of Youth reporting positively on Participation in Treatment Planning may have been the result of COVID-related changes in the way in which services were received, (i.e., an increase in meeting virtually), which may generally have been more convenient and effective for adult clients and less effective for youth clients and their families.

URS Table Number	General Notes
12	Nicotine-related diagnoses were excluded when calculating percent with "Substance Use Problem" in Table 12. When nicotine-related diagnoses are included, the % of those with a co-occurring disorder (excluding unknown SUD status) increases to 46% for Adults and 6% for Youth, which is no change from FY20. For the BCI, adult clients who had a "Substance Use Problem" included those with a documented SUD dx, as well as clients indicating a substance use disorder (including tobacco) through grant-funded spreadsheets and Consumer Satisfaction Surveys without necessarily having a specific SUD diagnosis documented in paid claims. Nicotine-related diagnoses were only listed in the BCI if there were no non-Nicotine SUD diagnoses. Qualifying diagnoses excluded dxs in remission.
15	Living situation is measured only for a portion of clients treated at community mental health centers and those receiving grant-funded services, with the remaining known values based on validated geocoded addresses. Increases in Private Residence for all ages, Residential Care, and Unknown, as well as the decrease in Not Collected, is due to using geocoded physical addresses of clients whose living situation was not available through other data resources to identify Private Residence. The increase in homelessness is likely due to the impact of COVID-19, as well as improved data collection. The increase in recent update on residential status is also due to the use of geocoding of physical addresses for clients whose living situation was not available through other sources.
T20A, T20B & T21	Decreases in readmission rates for both the state hospital and all psychiatric inpatient is likely due to the impact of COVID-19.
MH-CLD	The increase in the percent of clients discharged with treatment complete, as well as the decrease in percent discharged due to lost contact, was due to improved data collection, as well as counting most of those with a one-time service date as being discharged with treatment complete.
MH-CLD	The increase in the percent of clients continuing at the end of the reporting period may speak to the positive impact of COVID-related federal monetary support, resulting in an increase in services, as well as providers and clients having better adapted to changes in the way services were received due to the pandemic.

## **Errata Sheet to 2021 URS Output Tables**

This page includes clarifications and corrections to 2021 URS Output Tables.

### **APPROPRIATENESS DOMAIN: Living Situation of Consumers Service by State Mental Health Agency Systems, FY2021**

The table counts and percentages have been updated due to a processing error in the “Not Available” category.

### **APPROPRIATENESS DOMAIN: Adults with SMI and Children with SED Receiving Evidence-Based Services for First Episode Psychosis (FEP), 2021**

The table counts and percentages have been updated in “CSC-FEP Fidelity and Training State” and “Clients Served by Programs With and Without CSC-FEP Fidelity” due to a processing error in counting several fidelity programs.
