

## 2021 Uniform Reporting Summary Output Tables Executive Summary

State Mental Health Agencies (SMHAs) compile and report annual data as part of their application package for SAMHSA's Community Mental Health Block Grant. These compiled data constitute the Uniform Reporting System (URS).

The URS is comprised of 21 tables that are developed by SAMHSA in consultation with SMHAs. The 2021 URS Output Tables present findings from 59 states and U.S. territories. Each output table provides summary information on the SMHA clients served in 2021: sociodemographic characteristics of clients served, outcomes of care, use of selected evidence-based practices, client assessment of care, insurance status, living situation, employment status, and readmission to state psychiatric hospitals within 30 and 180 days. Key data highlights are listed below:

- In 2021, 8,195,517 clients received SMHA services from 59 states. This is an increase from 8,013,396 SMHA clients in 2020. There were 5,789,234 adults (or 17.3 per 1,000), 2,175,848 children (or 29.9 per 1,000) served. About 9,311 (0.1 percent) clients were missing age data.
- Among SMHA clients, there were 4,342,545 (53.0 percent) females served while there were 3,806,666 (46.4 percent) males served. In 21 states and U.S. territories, more SMHA males were served than females. While in 38 states and U.S. territories, more SMHA females were served.
- The age distribution among SMHA clients was the largest among ages 25-44 with 32.9 percent, followed by ages 45-64 with 23.6 percent, children ages 0-12 with 14.8 percent, and children ages 13-17 with 12.1 percent.
- The highest percentage of SMHA clients that were served was among the White population with 58.1 percent, followed by Black or African Americans with 17.9 percent, and only 15.7 percent for Hispanics.
