

## 2021 Uniform Reporting Summary Output Tables Executive Summary

State Mental Health Agencies (SMHAs) compile and report annual data as part of their application package for SAMHSA's Community Mental Health Block Grant. These compiled data constitute the Uniform Reporting System (URS).

The URS is comprised of 21 tables that are developed by SAMHSA in consultation with SMHAs. The 2021 URS Output Tables present findings from 59 states and U.S. territories. Each output table provides summary information on the SMHA clients served in 2021: sociodemographic characteristics of clients served, outcomes of care, use of selected evidence-based practices, client assessment of care, insurance status, living situation, employment status, and readmission to state psychiatric hospitals within 30 and 180 days. Key data highlights are listed below:

- In 2021, 8,195,517 clients received SMHA services from 59 states. This is an increase from 8,013,396 SMHA clients in 2020. There were 5,789,234 adults (or 17.3 per 1,000), 2,175,848 children (or 29.9 per 1,000) served. About 9,311 (0.1 percent) clients were missing age data.
- Among SMHA clients, there were 4,342,545 (53.0 percent) females served while there were 3,806,666 (46.4 percent) males served. In 21 states and U.S. territories, more SMHA males were served than females. While in 38 states and U.S. territories, more SMHA females were served.
- The age distribution among SMHA clients was the largest among ages 25-44 with 32.9 percent, followed by ages 45-64 with 23.6 percent, children ages 0-12 with 14.8 percent, and children ages 13-17 with 12.1 percent.
- The highest percentage of SMHA clients that were served was among the White population with 58.1 percent, followed by Black or African Americans with 17.9 percent, and only 15.7 percent for Hispanics.

**Note:**

This table uses data from URS Table 14a, Table 14b and from the US Census Bureau. All denominators use US Census data from 2020

US totals are calculated uniquely for each data element based on only those states who reported clients served.

Regional groupings are based on SAMHSA's Block Grant Regions.

## North Dakota

URS Table Number	General Notes
16A	ND contracted with Prairie St. John's to provide First Episode Psychosis services. Prairie St. John's terminated the contract with ND to provide services on April 30, 2020. ND was unable to contract to provide FEP services from 7/1/2020-6/30/2021 due to COVID-19 and other factors. ND has a Memorandum of Agreement with the Field Services Division to began implementation of FEP services in 2 Human Service Centers (community mental health providers) starting 9/1/2021.
16 and 17	Regarding fidelity measurement, the State of ND has additional internal mechanisms. Our Treatment Team Fidelity is our own creation based on best practices for individuals with SMI and SUD; the statewide management team measures fidelity in this strategy. The State also uses Practice Model Fidelity, which is an internal measure conducted by a statewide team as well as by individual teams at each of our Human Service Centers. This practice model has components of ACT and IDDT (best practice components of intensive community outreach).
2A, 3, 4, 5A	All multi-year decreases when comparing the 2021 reporting year to 2020 are a result of the following explanation: For the 2021 reporting period, the State of ND incorporated a new criteria into our BCI data extract. This change established a 90-day administrative discharge status for individuals whose engagement in care lapsed beyond 90 days and did not receive service in the reporting period. This criteria resulted in significantly fewer records in the BCI extract overall, which then caused a percentage change fluctuation across the data in comparison to the previous reporting year. This change is generally reflected as a percentage reduction because the overall record count decreased.
6	Regarding the decrease in average LOS, our LOS has been decreasing over a span of 10 years and so the decrease is not a surprise and an artifact of our skilled staff and improved care. There is a larger percentage of patients, however, from 2021, that stayed longer than expected due to an increase of denials/refusals for individuals who needed a DD assisted living facility or a nursing home. This would drive the changes in counts for those who were still in the state hospital facility at the end of 2021, but had been there for less than one year.
7, 8	All increases and decreases in funding sources and spending in tables 7 and 8 are related to the pandemic response to COVID-19 and how operations needed to be adjusted
11	Regarding the multi-year percentage increase in satisfaction, our clinical services have been changing over the last several years; however, this past year we have seen the doubling of services offered in home or other community settings and an improved focus on rehabilitative interventions – all of which may drive the satisfaction rate in a more positive direction.
12	In regards to the SMI/SED increases, this is a reflection of the State of ND's focus on serving first the clients with SMI/SED and, when possible, referring other individuals to other community providers. Overall, there has been an increase in demand for services and, due to our priorities, that drives the higher percentage of SMI/SED retained for care.
14A	In regards to the SMI/SED increases, this is a reflection of the State of ND's focus on serving first the clients with SMI/SED and, when possible, referring other individuals to other community providers. Overall, there has been an increase in demand for services and, due to our priorities, that drives the higher percentage of SMI/SED retained for care. All race categories for SMI/SED appear to have increased with the exception of multi-racial. However, those identifying as multi-racial constitute such a low percentage of the overall population that any fluctuation in count would cause a larger percentage change. There has been no change in practice for how race demographics are gathered; therefore, fluctuation is either an artifact of who either requests services from the State or who the State retains for services.
16	The Therapeutic Foster Care data is extracted from a system that is separate from our main EHR. There is no ID relationship between the data in the EHR and this system. Therefore, it is not possible to break down the demographics of the counts in the same manner as the other columns in this table. There is no way to resolve this current edit given the disparity between the data sources. The Therapeutic Foster Case data is available as a total count only.
20B	While there is a percentage decrease in re-admits at 180 days for forensic patients, the overall difference from the previous reporting cycle is 12 fewer readmits. This level of variation is likely due to normal fluctuation in data and does not necessarily have an underlying cause that the state can identify.

## **Errata Sheet to 2021 URS Output Tables**

This page includes clarifications and corrections to 2021 URS Output Tables.

### **APPROPRIATENESS DOMAIN: Living Situation of Consumers Service by State Mental Health Agency Systems, FY2021**

The table counts and percentages have been updated due to a processing error in the “Not Available” category.

### **APPROPRIATENESS DOMAIN: Adults with SMI and Children with SED Receiving Evidence-Based Services for First Episode Psychosis (FEP), 2021**

The table counts and percentages have been updated in “CSC-FEP Fidelity and Training State” and “Clients Served by Programs With and Without CSC-FEP Fidelity” due to a processing error in counting several fidelity programs.
