

2022 Uniform Reporting Summary Output Tables Executive Summary

State Mental Health Agencies (SMHAs) compile and report annual data as part of their application package for SAMHSA's Community Mental Health Block Grant. These compiled data constitute the Uniform Reporting System (URS).

The URS is comprised of 21 tables that are developed by SAMHSA in consultation with SMHAs. The 2022 URS Output Tables present findings from 59 states and U.S. territories. Each output table provides summary information on the SMHA clients served in 2022: sociodemographic characteristics of clients served, outcomes of care, use of selected evidence-based practices, client assessment of care, insurance status, living situation, employment status, and readmission to state psychiatric hospitals within 30 and 180 days. Key data highlights are listed below:

- In 2022, 8,180,236 clients received SMHA services from 59 states and U.S. territories. This is a decrease from 8,195,517 SMHA clients in 2021. There were 5,965,872 adults (or 23.1 per 1,000), 2,197,002 children (or 29.9 per 1,000) served. About 17,362 (0.2 percent) clients were missing age data.
- Among SMHA clients, there were 4,394,191 (53.7 percent) females served while there were 3,730,939 (45.6 percent) males served. In 27 states and U.S. territories, more SMHA males were served than females, while in 32 states and U.S. territories, more SMHA females were served.
- The age distribution among SMHA clients was the largest among ages 25-44 with 33.0 percent, followed by ages 45-64 with 22.8 percent, children ages 0-12 with 14.2 percent, and children ages 13-17 with 12.7 percent.
- The highest percentage of SMHA clients that were served was among the White population with 57.9 percent, followed by Black or African Americans with 17.4 percent. SMHA clients served were 15.8 percent Hispanic and 74.5 percent non-Hispanic.

Tennessee 2022 Mental Health National Outcome Measures (NOMS): SAMHSA Uniform Reporting System

Utilization Rates/Number of Consumers Served	U.S.	State	U.S. Rate	States
Penetration Rate per 1,000 population	8,180,236	56.44	24.37	59
Community Utilization per 1,000 population	7,900,059	53.26	23.53	59

Note:

Are Client Counts Unduplicated? Duplicated between Hospitals and Community **Number of States with Unduplicated Counts** 43

This table uses data from URS Table 2a, Table 2b and from the U.S. Census Bureau. All denominators for penetration rates use the U.S. Census data from 2021.

U.S. totals are calculated uniquely for each data element based on only those states who reported clients served.

The penetration rates for 'Other' gender as well as Age, Gender, Race and Ethnicity Not Available are not reported on this table because the U.S. Census data does not include these categories.

Regional groupings are based on SAMHSA's Block Grant Regions.

State Notes:

Table 2a
 Age Age is determined at midpoint of reporting year.
 Gender None
 Race TennCare includes Native Hawaiian or Other Pacific Islander in the Asian race category and does not collect multi-race data.
 Overall Data includes: TennCare (Medicaid); TDMHSAS Behavioral Health Safety Net; non-Medicaid crisis; state psychiatric hospitals; and private psychiatric hospitals that contract with TDMHSAS. See General Notes for more information.

Table 2b
 Age None
 Gender None
 Race None
 Overall Ethnicity is not collected and therefore, not reported.

Note:

This table uses data from URS Tables 5a and 5b.

Type of Medicaid Data Reported

Data based on Medicaid Paid Services

State Notes:

- 5a Age TennCare includes Native Hawaiian or Other Pacific Islander in the Asian race category and does not collect multi-race data.
- 5a Gender None
- 5a Overall TennCare (Medicaid); TDMHSAS Behavioral Health Safety Net (non-Medicaid); Crisis (Medicaid and/or non-Medicaid); state psychiatric hospitals (Medicaid and/or non-Medicaid); and contracted private psychiatric hospitals (non-Medicaid). See General Notes.
- 5b Overall Ethnicity is not collected and therefore, not reported.

Note:

This table uses data from URS Table 14a, Table 14b and from the U.S. Census Bureau. All denominators use the U.S. Census data from 2021.

U.S. totals are calculated uniquely for each data element based on only those states who reported clients served.

The penetration rates for 'Other' gender as well as Age, Gender, Race and Ethnicity Not Available are not reported on this table because the U.S. Census data does not include these categories.

Regional groupings are based on SAMHSA's Block Grant Regions.

State Notes:

Table 14a

Age Hospital and Community data: age is determined at the midpoint of the reporting year.
Gender None
Race TennCare includes Native Hawaiian or Other Pacific Islander in the Asian race category and does not collect multi-race data.
Overall Data includes: TennCare (Medicaid); TDMHSAS Behavioral Health Safety Net; state psychiatric hospitals; and private psychiatric hospitals that contract with TDMHSAS. See General Notes for more information.

Table 14b

Age None
Gender None
Race None
Overall Ethnicity is not collected and therefore, not reported.

ACCESS DOMAIN: Adults with SMI and Children with SED Served in Community Mental Health Programs by Age and Gender, FY 2022

Note:

Resident clients are clients who were receiving services in inpatient settings at the end of the reporting period.

This table uses data from URS Table 6.

State Notes:

State Psychiatric Hospitals Age calculated as age at midpoint fiscal year; TN does not provide state psychiatric hospital beds for children, ages 0-17. Concentrated efforts to discharge patients with extended stays at RMHIs resulted in an increase in the overall length of stay.

Other Psychiatric Inpatient Data include TennCare (Medicaid).

Residential Treatment Centers Data include TennCare (Medicaid).

Overall Hospital and Community data: age determined at midpoint of the reporting year. See General Notes.

APPROPRIATENESS DOMAIN: Percent of Adults and Children Served Who Meet the Federal Definition for SMI/SED and Percent of Adults and Children Served Who Have Co-Occurring MH/SU Disorders, FY 2022

Tennessee

Reporting Period: 7/1/2021 To: 6/30/2022

Adults and Children who meet the Federal Definition of SMI/SED	State	US Average	US Median	States Reporting
Percent of Adults served through the SMHA who meet the Federal definition for SMI	84.0%	69.7%	74.0%	57
Percent of Children served through the SMHA who meet the Federal definition for SED	84.0%	69.0%	74.0%	57

Co-occurring MH and Substance Use Consumers	State	US Average	US Median	States Reporting
Percent of Adults served through the SMHA who had a co-occurring MH and SU disorder	29.0%	26.4%	22.5%	56
Percent of Children served through the SMHA who had a co-occurring MH and SU disorder	2.0%	5.7%	2.5%	56
Percent of Adults served through the SMHA who met the Federal definitions of SMI who also have a substance use diagnosis	17.0%	29.8%	24.0%	56
Percent of Children served through the SMHA who met the Federal definitions of SED who also have a substance use diagnosis	2.0%	10.5%	3.0%	56

Note:

This table uses data from URS Table 12.

How are the number of clients with co-occurring disorders counted and calculated?

TennCare reports the count of SMI/SED and SUD who receive a behavioral health service. (SMI & SUD)/SMI=31,658/196,172 = 16.14%; (SED & SUD)/SED=1,975/116,749= 1.69%]. TennCare employs an operational definition based on diagnosis and a 15-month claims history to categorize individuals as having a serious mental illness (SMI). Substance abuse disorders (SUD) based on the presence of a secondary diagnosis of a substance use disorder (ICD-10 section F10-F19: Disorders due to psychoactive substance use).

State Notes:

None

Tennessee

URS Table Number	General Notes
2A, 5A, 14A, 21	TennCare includes Native Hawaiian or Other Pacific Islander in the Asian race category and does not collect multi-race data.
2B, 5B, 14B	Ethnicity is not collected, therefore, this information is not reported.
3, 15A	A person who was served in both a community setting and inpatient setting was included in both rows. "Other psychiatric inpatient" includes psychiatric inpatient services provided to TennCare (Medicaid) enrollees and to indigent patients through private psychiatric hospitals under contract with the TDMHSAS.
4	Decreases in Total number of consumers employed and Total number of consumers Not In Labor Force are likely due to differences in population. TN collects some information from some providers through a survey that is often self-administered. There were significantly fewer surveys received this year. This may have also contributed to these decreases.
4	Survey responses have continued to decline over the past few years. COVID-19 may have contributed to this decline but, efforts are being made to increase responses. The provider that contributes the largest number of surveys has been updating their electronic medical record system. As this process is nearing its end, we expect to see an increase in survey participation. In addition, only two providers are currently collecting surveys electronically. We are reviewing the possibility of administering electronic surveys through the other providers.
4, 14	TennCare (Medicaid) data is provided at the aggregate level, not client level. This does not allow for the de-duplication of clients across TennCare and TDMHSAS systems. It is possible for people counted under TennCare to also be counted under TDMHSAS data systems. Clients receiving care at state hospitals may become eligible for TennCare (Medicaid) services during their stay, resulting in a reimbursement of TDMHSAS dollars.
5, 5A	The decrease in persons served by both Medicaid and Non-Medicaid is likely due to a decrease in survey responses. TN collects information from some providers through a survey that is often self-administered. There were significantly fewer surveys received in FY2022 than FY2021.
5	Decrease in Medicaid Status Not Available is likely a result of the data collection process. TN collects some information from some providers through a survey that is often self-administered. There were significantly fewer surveys received this year. This may have also contributed to this decrease.
5	TennCare (Medicaid) data is provided at the aggregate level, not client level. This does not allow for the de-duplication of clients across TennCare and TDMHSAS systems. It is possible for people counted under TennCare to also be counted under TDMHSAS data systems. Clients receiving care at state hospitals may become eligible for TennCare (Medicaid) services during their stay, resulting in a reimbursement of TDMHSAS dollars.
6	Compared to last year (10), there were almost double (18) clients with LOS greater than 1000 days in state hospitals. This skewed the average and mean for "Clients in Facility More Than 1 Year: Average Length of Stay (in Days): Residents at end of year".
7	TN's allotment for the Mental Health Block Grant increased. As a result, funding for "Other 24-Hour Care (Residential Care)", "Ambulatory/Community Non-24-Hour Care", and "Administration (excluding program/provider level)" increased.
7	TN's allotment for the Mental Health Block Grant increased. As a result, funding for "Other 24-Hour Care (Residential Care)", "Ambulatory/Community Non-24-Hour Care", and "Administration (excluding program/provider level)" increased.
7	"Ambulatory/Community Non-24-Hour Care" is mostly funded through interdepartmental funding, all of which was supported by federal dollars. Whereas these funds were considered "Local Funds (excluding local Medicaid)" in FY2021, these funds are categorized based on the original funding source in FY2022.
7	"Administration (excluding program/provider level)" varies from year to year in spending and funding source. Compared to FY2021, funding for "Administration (excluding program/provider level)" decreased from "Local Funds (excluding local Medicaid)" and "Other", and increased from "State Funds", "Other Federal Funds (e.g., ACF (TANF), CDC, CMS (Medicare), SAMHSA, etc.)", "Medicaid (Federal, State, and Local)", and "Mental Health Block Grant".
7	There was a 26% decrease in State Funds for "Other Psychiatric Inpatient Care" because the demand for inpatient services in East TN Region 1 and 2 decreased.
7	"Local Funds (excluding local Medicaid)" for "Administration (excluding program/provider level)" decreased due to less discretionary funding as grants expired between FY2021 and FY2022.

URS Table Number	General Notes
7	TN increased investments in housing/residential programs. This resulted in a large increase in "Other 24-Hour Care (Residential Care)" when comparing FY2021 to FY2022.
7	Expenditure activity for "State Hospital" is dictated by the Regional Mental Health Institute revenue, which is based on client mix and varies widely from year to year.
7, 8	The expenditures are zero for ARP funds. TN plans to use those funds to continue the services for an additional two years started by our providers under the COVID-19 Relief Funds (MHBG) because those funds end March 2023 and the ARP Funds go until 2025.
7A	Total CSC-Evidence-Based Practices for First Episode Psychosis Expenditures saw a 15% increase because of the addition of Other funding.
8	The increase in MHBG expenditure for "Infrastructure Support" is due to Crisis services using set-aside for staffing to support 9888 implementations. The increase in "Planning Council Activities" expenditure is a result of the growth in the council and its function to the department. In addition, a position was added in FY2022 that also utilizes COVID-19 Funds. Increased support for Supported Employment program for additional IPS Trainer to support fidelity to the evidence-based program increased "Quality assurance and improvement" expenditure. Increased support for Certified Peer Recovery Specialist Training, for Tennessee Disability Pathfinder resource, Mental Health Screening and Crisis Intervention Team (CIT) increased expenditures for "Training and Education".
8	Total MHBG Expenditures for Non-Direct Service Activities increased in FY2022 because there was an increase in spending for Planning Council Activities, Quality assurance and improvement, and Training and Education. In addition, there was spending towards Infrastructure Support that did not occur in FY2021.
8	The current level of funding for Non-Direct Services is anticipated to decrease in FY2023. COVID-19 Funds spending is not expected to continue through FY2023 and Infrastructure Support is expected to decrease in FY2023 as well.
10	There are several more providers compared to FY21. The added providers are primarily related to the crisis setaside. The new providers include the NSPL call centers and TN did not previously contract with them on MHBG. Also, please note that this table is only for the standard MHBG so the amounts are not inclusive of COVID Relief.
12, 14A, 15A	TennCare employs an operational definition of SMI/SED based on ICD10 behavioral health diagnosis and a 15-month claims history to categorize individuals as having serious mental illness (SMI/SED). Substance use disorders (SUD) were based on the presence of a primary or secondary diagnosis of substance use disorder (ICD-10 section F10-F19: Disorders due to psychoactive substance use). Co-occurring diagnoses were based on a primary mental health diagnosis and a secondary substance use diagnosis.
14A	Decreases in Total number of African American consumers with SMI/SED and Total number of Multi-racial consumers with SMI/SED are likely due to a change in the population. TN collects some information from some providers through a survey that is often self-administered. There were significantly fewer surveys received this year.
14A	There was an overall decrease in African American consumers between FY2021(75,865) and FY2022(62,392). Though there is a 22% decrease in "N" of Total number of African American consumers with SMI/SED, when comparing the proportion of Total consumers, the difference is lessened (FY2021 - 77% and FY2022 - 73%).
14A, 15A	In March 2015, Crisis Services stopped collecting data on diagnoses. Data from TennCare (Medicaid); TDMHSAS Behavioral Health Safety Net; state psychiatric hospitals; and private psychiatric hospitals that contract with TDMHSAS, are included in these tables.
15	The decrease in Total number of consumers living in Private Residence is likely due to a change in the population. TN collects some information from some providers through a survey that is often self-administered. There were significantly fewer surveys received this year.
15	One of the providers that contributes the largest number of surveys each year was in the process of updating their electronic medical record system this year. We expect survey counts to increase next year, perhaps increasing the Total number of consumers living in Private Residence.
16	Multi-Systemic Therapy services for children with SED in Tennessee decreased by 15% in FY2022, the percentage change being somewhat exaggerated by low total counts for this EBP (FY2021 - 203, FY2022 - 172) with the change in N merely 31.
16 & 17	Other Evidence Based Practices reported by providers include CBT/CBT-Insomnia/CBT- Suicide Prevention, DBT, CPT, PE, RRT, EMDR, FT, Gottman, PCIT.
16	Receiving Assertive Community Treatment increased in Tennessee in FY2022. This service is offered by two providers with one of the providers doubling the number of persons served in FY2022. The percentage increase is somewhat exaggerated by the low counts for this category (FY2021 - 108, FY2022 - 303).
16	Total number of Adults with SMI served increased in Tennessee in FY2022 with half of all providers showing an increase in the numbers of SMI adults served. COVID-19 barriers coming down likely contributed to this increase in numbers served.

URS Table Number	General Notes
16	Many of the other tables were answered through combining data from the state's internal data warehouse systems, survey data collected from our state partners, and TennCare's aggregate data. Survey data decreased significantly this year and is expected to underrepresent persons served. However, aggregate data was collected from providers to complete evidence-based practice tables.
16	Receiving Therapeutic Foster Care increased in Tennessee in FY2022 as a result of one provider that was unable to report in FY2021 due to the use of two computer systems that prevented them from ensuring unduplicated counts. This provider was able to resume reporting in FY2022.
16	Receiving Family Functional Therapy, two providers in Tennessee offered this EBP service for the first time in the five years. Previously this was the only EBP category that was a consistent zero. The N is still relatively small at 65.
17	Receiving Integrated Treatment for Co-occurring Disorders for adults with SMI in Tennessee decreased by 30% in FY2022 with the change in N being 7,209 (FY2021 - 24,223, FY2022 - 17,014). One of the top three providers of this service, accounting for 32% of FY2021 adults served, stated their number reported in FY2022 was lower due to their belief that their prior submission included more persons than should have been included in this EBP and may have also included duplicate persons.
17	Receiving Integrated Treatment for Co-occurring Disorders for adults with SMI in Tennessee decreased by 30% in FY2022 with the change in N being 7,209 (FY2021 - 24,223, FY2022 - 17,014). One of the top three providers of this service, accounting for 32% of FY2021 adults served, stated their number reported in FY2022 was lower due to their belief that their prior submission included more persons than should have been included in this EBP and may have also included duplicate persons.
17	Receiving Illness Self Management and Recovery rebounded in Tennessee in FY2022 after two of the larger providers of this EBP service reported lower numbers in FY2021 as a result COVID-19 creating barriers to treatment in FY2021. When comparing the number reported in FY2020 (4,631) and for FY2022 (4,187) you see the rebound.
17	Receiving Medication Management increased in Tennessee in FY2022 due to two providers increasing their counts. The first provider was unable to provide this service in FY2021 due to the COVID-19 barriers, this provider returned to providing this service in FY2022 at similar levels. The second provider, becoming one of the largest to offer, added this EBP to their services in FY2022.
20A, 20B	Many of the other tables were answered through combining data from the state's internal data warehouse systems, survey data collected from our state partners, and TennCare's aggregate data. Survey data decreased significantly this year and is expected to underrepresent persons served. However, this table is collected through a different source. Aggregate data was collected from providers complete evidence-based practice tables.
20A, 20B	Though there are many variables that can affect readmission rates, TDMHSAS data suggests that the primary contributing factor is non-adherence to medication and treatment regimens that are recommended after discharge. Efforts have been made to increase community support systems for people with mental illness, including the Tennessee Behavioral Health Safety Net. These supports encourage improved compliance with discharge treatment plans and in turn, reduce the potential for readmission. The Total percent readmitted within 30 days suggests short term improvements. During 2021, due to COVID-19 and isolation requirements, forensic admissions were slowed significantly. Those found committable following a 30-day forensic evaluation were not being admitted as quickly which likely accounts for the decrease in the 30-day readmission rate for forensics. In the later part of 2022, efforts were being made to increase the number of forensic admissions across the RMHIs in an effort to reduce the waitlist which may have contributed to the increase in 180-day readmissions.
